(2) He thus discriminates between circum stance, incident, and fact: "Cireumstance is a general term; incident and fact sre specjes of circumstances. Incident ia what happens ; fatt ia what is done ; cincumstance in not only what happens and is done, but whatever is or belongs to a thing. To everything are annexed circumstances either of time, place, age, colour, or other collateral appendages which change its nuture. Everything thast moves and oper ates la exposed to incidents, effects are pro duced, results follow, and changes are brought about; these are incidents: whstever moves and operates does, and what it produces is done or is the fact. . . Circumstance is as often employed with regard to the operation as the properties of things, in which case it is most analogons to incidient and fact: it may then be employed for the whole affair, or any part of it, whatever that can be distinetly considered. Incidents and facts either are circumstances, or have circumstances belonging to them. . Circumstance comprehends in ita aigniflcation whatever may be said or thought of any thing; incident carriea with it the idea of whatever may befal or be said to befal sny thing; fact includes in it nothing but what really is or is done. A narrative therefore may contsin many circumstances and incidents without any fact, when what is related is either fictitious or not positively known to have happened: it is necessary for a novel or play to contain much incident, but no focts, in order to render it interesting: history ahould contain nothing but facts, buthenticity is its chief merit." (Crabb:Eng. Synom.)
gir'-cŭm-stąnọe, v.t. [Ciacumbtance, e.] To placa in a certsin situation or position relatively to other things.
"I must be elrcumstanced."--Shakesp, : Othollo, iil 4
çĩr'-cŭm-stạnçed, a. [Eng. circumstands);

1. Situated or conditioned relatively to other
things. things.
"Aud in two countries vory difierently cercumstanced individunial of the samus arecies, having
slighty different constitntions or structure, Dagwin: Origin of species (ed 18.9), et. i. p. gis.
2. In a condition as regards wealth or porerty.
çir'-cŭm-stănt, $a . \& \&$ [Lat. circumstans, pr. par. of circumsto $=$ to atand round, to surround: circum $=$ around, and sto $=$ to atand.]

Beyond All graides dovalored.'
(2) Incidental, accidental, not essential.
(3) Full of smail circumstances or minution; particular, precise, minute.

##   4s vol. 11 p. 180

## * (4) Full of pomp or ehow. <br> ". <br> 42. Of persons: With an ezceseive attention

 to amail events and details; precise, punctilions.II. Jaw: Inferred from circumstanoen deanced indirectily, not by direct proof.
Circumstantlal evidence: Evidence obtained from circumstanoes, which necessarily or uspally attend facts of a partlcular nature, from which arises presumption; any evidence from which arises presumption, and positive. A light, i.e. a slight not direct and positive. A light, i.e. a slight prosumption, has no weight or validity. A Fresumption of eny ktnd is relied on oniy prohable presumption has considermble weight, and a violent ons, that is one in which those circumstances appear which necessarily attend the fact, is in many cases held equal to fall proof. (Blackstone, bk. 1i1., ch. 23.)

## 

 perfect. fo theTrabb thas diatinguishes betwen stantial, particular, and minuts: "Circumstantial expresses less than particular, end that less than minute. A circumstantial account contains all leading events; a parbicular acconnt inclindes every event and movement however trivial; a minute aceount omits nothing as to person, time, place, figure, form, snd every other trivial circumstance connected with the events. A narrative mey be circum. atuntial, perticular, or minute; an mquiry, inveatigation or description mav be particuler or veatigation, or descripthon may be parn culut or minute, a detail may be minute. An event or occurrence may be particular, a circumstance or particular may be mitute. We may be generully satisfied with a circametantial account of ordinary events; but whatever interesta the feelings cannot be detailed with too much particularity or minuteness." (Crabb: Eng. Synon.)
3. As subst.: Anything incidental or not ensentisl to the main eubject (generally in the plural).

Bot. Rock-rosee, an order of plants, the typical one of the alliance Cistales. It consigte of shrubs or herhaceons plants, often with viscid branches The leaves are entire, opposite or alternate, feather-veined, or more rarely fan-veined. The flowers, which are very fugacions, are generally in voilateral racemes; their colour is white, yellow, or red ; sepals $3_{-5}$, persistent unequal, petals five rarely three, stamens hypogynous distinct, defnite or indeflnita in number; ovary one detinte or indefnite in number; ovary one or many-celled, with the style and atigma simple. Fruit capsular, $3-5$ or ten-valved, one-celied, with parietal placente, or imper-
fectly five or ten-celled. They are found fectly five or ten-celled. They are found chiefly in the South of Europe aod the North of Africa One is British. Known genera in 1845, вeven; speciee 185. For their qualities see Cochlospermitm and Ladantim.
çis-tā'-ceous, a. [Cigtacere]
Bot. : Belonging to, or oharacteristic of the Cistaces (q.v.).
gis'-tal, a. [Lat. cis(tus) ; Eug. suff -al.] Bot.: Pertaining to Lindley's botavics sllispce Cistales ( $q$ v.).
çis-tā'-1ēs, s. pl. [Prom cistus, and Lat. fem. pl. adj. suff. .ales ]
Bot. . An alliance of plants, placed by Lindley uoder his Hypogynous Exagens He inclindes under it the Cistacex, Brassicacea Resellacce, and Capparidacea, though it is hard to believe that Brassicaceæ is not entitled tor rank as the type of an sliance.
gis-tē'la, çis-tě1'-la, s [Lat. cistella $=\mathbf{a}$ little ehest, dimin. of cista $=$ a chest. ]

1. Entom. (Of the form Cistela): A genus of Coleopitero:1s insects, the typical one of the tribe Cistelides. Sub-seetion, Stenelytra There sre five British specie日. (Sharpe.) Cistela ceramboides is found on flowers ; C. sulphurea is conflued to the sea-coast.
2. Bot. (Of the form Cistella): A capsular shieid of some lichens. [Cistula.]
gis-tĕ1'-1-dēş, s. pl. [Lat. cistelce.]
Entom.: A tribe of Coleopterons insects, of which Cistela is the tyipe. Sectioo Heteromera, sub-section Stenelytra.

Çis-ter'cian (cǐan as shan), s. \& a. [Low Lat. Cistercium; Fr. Cistcoux, Citeaux, a convent situated near Dijou in France.]
A. As substantive

Ch. Hist. : A nember of a certain mooastie orter in the Roman Church, founded in 1098 by Robert, abbot of Molesme in Bur gundy, who having lost hope of inducing the monks, whose chief he was, to live n! to the rule preseribed by st. Benedict, retired with iwenty associates to Citeaux [see etym.] and founded there a congregation which afterwards developed into the order of the Cis. tercians. It went through the ordinary cycle of such monastie fits i.e., at first its memhers were poor
and really holy; then the fane of their sanctity spreading through Furope, branclies of the order were estahlished many plsces. To aid men so deserv. lug. large contributions were given by lious men and women, and before the twelfth century lasd run its course, the Cis. tercisn conmmoi-
 Wies were wealthy. With the growth of this wealth, the gradual relaxation of the atriet Benedictine rules took place, till finally the Cistercians lost their high reputation and sank to the level of the order against which their secession had been a protest, sod to that of the monastic order generally. During the time that the order was rising in importance, it enjoyed the advocacy of the celehrated St. Bernard of Clairvaux, who is regarded se ita second psrent and fouader, so thst it is sometimes called the Beroardine order, or the onder of St. Bernard Between them and the Cluniaceusisns there
was considerable animosity, and even public controversy. (Mashoim: Church His:, cent. xi., xii.)

8 Ae adj.: Pertaining to or connected with the order of monks deseribed in $A$
čs'tẽrn, " çis'-terne, *sis'terne,s. \&a.

1. A summons. [II. 1.]
2. A qnotation of the words of snother; the bringing forward snother as authority for a statement.

The letter-writer cannot rend these ettations ofthout thushing, after
*3. Aa enumeration, mention, or recital.
there remains a cifation of such as may pro-
in any country."-Harvey: On Conaumptions
II. Law:

1. The act of summoning or citing a person to spluear before a judge, especially of an ecelesiastical court.
"The ecclewisstical conrts proceed according to the course of the Civil and
sc."- Jacob: Lawe Dict.
2. The offein summons or notice to sppear served on any person.

That in the loode citactonn non nere
Ryto of Asten, 815
3. A reference to decided casea or books of authority to prove a point io law.
çi-tā'-tõr, \& [Lat.] One who cites. (Web. ster.)
çī-tā'-tõr-y, $a$. [Lat, citatoriua $=$ snmmoning or lertaling to a summons; cito $=$ to cite, to summon to appear.] Pertaining to, in the form or of the oature of, s citation.
letters ritatory aflixed on the deors of go-
 buried.

cita, v.t. [Fr. cller; Sp. \& Port citarr; Ital红 motion, to excite.]

1. To call upon authoritatively, to enjoin, to aummon or urge to an action

2. To summon officially to appear in sourt.

## 

8. To quota, to adduce as an authority.
"The devil can cite Seripture for his prapose."
. looked and apoke as it whan eletion a section

9. To bring forward or addnce as an example. - 6. To enumerate, to recount.

Wo cite our fanits."

## - 6. To argue, prove, or evidence. <br> Aged honear cthes a virtuous youth."

I (I) Crabb thua distinguishes between to citc and to quote: "To cite is amplnyed for per eons or things; to quote for things ouly authors are cited, pasaagea from their works are quoted; wa cite only by authority; wa quote for general purposea of convenience Hiatorians ought to cite their autherity in order to atrengthen their evidence and ingpir confidence; controversialists muat quote the objectionable passages in those works which they wish to coofute : it is prudant to cite no ona whoas authority is questionabla; it is superfluous to quote anything that can be easily perused in the original."
(2) He thus discriminates between to cite and to summon: "The idea of callug a persoo authoritatively to appaar, ia common to these terma. Cite is used in a general sense, summon a a particular and technical sense: a person may be cited to appear before his auperior ; he is summoned to appear before a court. the tation of the individual gives authority $t$ the act of cifing; the lew itself gives authorit to that of summoning. When cite is used in legal genas, it is mostly amployed for witnesses legal senas, it is mostly amployed for witnesses, and summon for every occasion : a person is
cited to give evidence, ha is summoned to cited to give evidence, ha is summonei)

- çǐt'- $\overline{\mathbf{e}}_{\mathbf{p}}$ 3. [City.]

## 

cilt-ra-cŏn'-ic, a. [Eng. citr(ic), and aconitic (q.v.).] Derived from the genera Citrus and Aconitum.

## citraconic acid, s.

Chem.: Pyrocitric acid $\mathrm{C}_{5} \mathrm{H}_{6} \mathrm{O}_{4}$ or $\mathrm{C}_{\text {C }}^{\mathrm{CH}_{3}} \mathrm{CO} . \mathrm{OH}$ $\stackrel{\text { Cl}}{ } 1 \mathrm{CO} . \mathrm{OH}$ A diatomic bibasic acid, Inomeric with itaconic and mesaconic acids obtained by diatilling citric acid; water is flrat given off at about $175^{\circ}$, vapours of acetone and CO, then the residue consists of aconitic acid; on continuing the distillation $\mathrm{CO}_{2}$ is given off and itaconic acid is formed ; afterwards water is given off, and an oily mass is left in the retort, consiating of citraconic anhydride, which, when exposed to the air, absorbs cuoiature and cryatallises into citracoulc acid, which melts at $80^{\circ}$. It unites readily with hromine, forming dibrompyrotartaric acid $\mathrm{C}_{5} \mathrm{H}_{8} \mathrm{Br}_{2} \mathrm{O}_{4}$. By the action of sodium amalgam, a solution of citraconic acid ia cooverted into pyrotartaric acid $\mathrm{C}_{5} \mathrm{H}_{8} \mathrm{O}_{4}$. When citraconic acid ja subjected to electrolyais, it gives off $2 \mathrm{CO}_{2}$ and 2 II , aed vields allytens $\mathrm{CH}_{3}-\mathrm{C}=\mathrm{CH}$. ${ }^{\text {By }}$ the action of hypechlorons acid HClO , eitraconic acid is cooverted into chlorecitramalic acid $\mathrm{C}_{5} \mathrm{H}_{7} \mathrm{ClO}_{5}$.
çǐt-ra-măl'-ic, a. [Eng. citric, and malte.] Having the citric and nalic acids in ita composition.

## citramalic acid, $s$.

Chem.: $\mathrm{C}_{5} \mathrm{IH}_{8} \mathrm{O}_{5}$ A dibasic acid obtained by the action of zinc on an aqueous golution of chlerocitranalic acid.
çǐt'-ra-mǐde, s. [Eng. citr(ic), and amtde (q.v.).]

Chem.: $\quad \mathrm{N}_{3}\left(\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{O}_{4}\right)^{\prime \prime \prime} \mathrm{H}_{6}$. A crystalline compond, slighty soluble in water. Obtained by the action of alcoholic amsoonia on citric ethers.
çit-ra-tax-tar-10, a. [Eng. cilric and tartaric.]

## citratartario acid, $s$

Chem. : $\mathrm{C}_{5} \mathrm{II}_{8} \mathrm{O}_{\mathbf{6}}$, a syrupy deliquescent dihasic acid obtaioed by heating chlorocitramalic acid in a sealed tube, with water, acetona $\mathrm{CH}_{3} . \mathrm{CO} . \mathrm{CH}_{3}$, hydrochloric acid and carbon diexide being also formed.
cit'-rate, a [From citr(ic); -ate (Chem.) (q.v.)] Crithic acid.] Citrate of calciom ocenrs in onions and in potatoes, citrate of yotassium in artichokes and in potatoes.
git'-ry-an, $a$. [Lat. citre(um) $=2$ citron, and Ing. adj. sntw. -an.] The same as Crtrine (q.v.).

## çit'-rēne, z. [Eng. citr(ic), and enff. enc.]

 Chem. : $\mathrm{C}_{10} \mathrm{H}_{16}$. An aromatic hydrocarbon boiling at $168^{\circ}$. It is obtained from the rind of Citrus Limonum.gǐt'-rě-oŭs, a. [Lat. citreus=pertaining to the ciltom.] Lemon-coloured, citrinous.
cit'trio, a. [Fr. citrique; Lat. citrus $=$ the citron-tree.]
Chem.: Of or pertaining to an acid obtained from the juice of the lemon and other froits.
citrie acid, 8

tetratomic tribasic acid, which occurs in the juice of lemons, also in gooasberries, currants, sce. It is obtained hy allowing the juice to sc. Indergo an incipient fermentation, filtering andergo an incipient fermentation, filtering after which milk of lime, the insoluble calcium after which milk of lime, the insoluble calolum by dilute sulphuric acid. It forms white crystals, soluble in water, and has an acid taate. it is nsed in dyeing and in calico-printing, and in the prejaration of effervescent summer beverage. Citric acid fused with potash is decomposed into nxalic and acetic acids, thus $\mathrm{C}_{6} \mathrm{H}_{8} \mathrm{O}_{7}+\mathrm{H}_{2} \mathrm{O}=\mathrm{C}_{2} \mathrm{H}_{2} \mathrm{O}_{4}+2\left(\mathrm{CH}_{3} . \mathrm{CO} .0 \mathrm{H}\right)$ has been formed synthetically from glyceria $\mathrm{CH}_{2} \mathrm{OH} . \mathrm{CHOH} . \mathrm{CH}_{2} \mathrm{OH}$, by converting it into aymnetrical dichlorhydrin, $\mathrm{CH}_{2} \mathrm{Cl}, \mathrm{CHOH} . \mathrm{CH}_{2} \mathrm{Cl}$ by oxidizing this into dichloracetone CH OCl.CO. $\mathrm{CH}_{2} \mathrm{Cl}$, which forms with atrong bydrocyanic acid an addition compound, cyano-dichitoracetone, which by the action of HCl and $\mathrm{H}_{2} \mathrm{O}$ is converted into dichloracetonic acid $\mathrm{Cli}_{2} \mathrm{Cl}, \mathrm{C}-\mathrm{CH}_{2} \mathrm{Cl}$
nentralised by $\mathrm{Na}_{2} \mathrm{CO}_{3}$, and heated with iwo mols. of KCN cyanide of potassium, which replaces the 2 Cl by 2 CN , forming sodium dicyanozcetonate; the solution is then saturated with 11 Cl and heated in a water bath, and the citric acid precipitated by milk of lime as calcium citrate. Citricacid forms three series of salts with the alkalies, called citrates. It gives no precipitate with potassium acetate Citratea of calcinin, lead, and silver are insolnble. Citric acid, added to a solution in oxcess, prevents the precipitation of ferric oxide and of alumina by ammonia.
2. Pharm. : Citric aeid aets as a refrigerant, and allays thirst and irritation of the akin. Citrate of ammonium increases the secretions. Citrate of iron and ammonia ocenrs in thin tranararent deep-red scales, soluble in water, but almost insolubla in rectifed spirit. It acta as a tonic, and is not astringent, and is given to resfore the blood to a healthy condition. Citrate of iron and quinine occurs in greeniah-yellow deliquescent acales soluhl in water. It combines the therapeutic properties of iron and of quinine. Citrate of perties of iron and of quinine. potassinm,
¢it'-ril, s. \& a. [From Lat. citrus (q.v.).] A ternis sigulying yellow, citron-coloured.
citril finch, s. A finch, Fringilla citrinella, found in ltaly, where it is prized for its song. It must not be confounded with the Yeltow Ammer, Enberiza citrinella, though both have a yellow breast.
çit-rǐn- $\overline{\mathbf{a}}$-tion, * çĭt-rĭn- $\overline{\mathbf{a}}$ 'çi-oun, s. [Low Lat. citrinatio.] A process by whicl anything takes the colour of a lemon or orange, the state 8 induced, yellowness. Originally a teria nsed in alchemy, lut still used in medicine.
ur cerueationg silver citrination

çĭt'-ríne, * çit'try̆n, * cyt'-ryne, a. \& s. ${ }^{[ } \mathrm{Fr}$. citrin; Lat. citrinus, from citrus $=$ the citron-tree.]
A. As adj. : Resembling a citron or lemon lamon-coloured, of a greeniah-yellow colour. "His rove wa hoigh, bis eyen were eytrune".
B. As substantive

1. Ord. Lang. : A greenish-yellow or lemon colaur.
2. Min.: A yellow pellucid veristy of quartz.
"A Apecies of cryatal of an extremely pure, elear, and Ine texturo, generally free from flawa and blemishos. linly bexangulir. nnd terminated hy nn hoxangular peramid. It is troin oue to four or Ave incheo in indies our jewellers have learned to call it eitrine; and cot atones for rings out of it
citrine-lake, s. A pigment prepared from the quercitron bark. It ia a brown pink, which is durable and dries well. (Weale.)

## citrine ointment, s.

Med. : A mercurial ointment, composed of four parts of mercury, twelve of nitric acid fifteen of prepared lead, and inirty-two of olive-oil.
cit'-ri-nous, a. [From Mod Lat. citrinus $=$ eitron-coloured or yellow.] Lemon-coloured, citreous.
çít'-rồn, s. \& a. [Fr. citron; Low Lat. citro, from Gr. кitpon (kitron); Lat. citreum (malum) $=$ a citron or lemon; citrus $=$ the lemon tree.]

## A. As substantive

Botany:

1. The citron-iree (q.v.).
2. The fruit of the citron-tree, reaembling a lemon, but less acid in taste. It is a native of Asia.
B. As adj. : Pertaining to, derived from, or having the qualities of the citron.

## citron-tree, $s$

Botany:

1. The iree, Citrus medica, which produces the citron. It has short and stiff branches, oblong toothed leaves, flowers purple externally, and fruit generally large, warted, and furrowed, having a protuberance at the apex, with a wery thick spongy adberent rind and a aubacid pulp. The Romans branght it from Media, where, however, it is not now, if it ever was, indigenous. It is at present cultivated in gardens in the warmer parts of both hemispheres. It furnisbes oil of citron and hemispheres.
2. A genus of plants of which the lemons, citrons, and orangea are specles. Order Aurantiscee. (Craig.)
Fingered citron: A citron with a remote resernblance to the human fingers. It couatitutes the genus sarcodactylia.
citron-water, s. A water diatilled from the rinds of citrons.
citron-wood, 8. The wood of Callitris quatrivalvis, an Algerian tree, much used in cabinet-making.
çit-rò-nā'-tion, s. [Citrination.]
çi-trö-nĕl'-la, e. [Mod. Lat. diruin. of Eng., \&c. citron (q.v.).]
Bot.: A species of grass, Andropogon citratum. It yields an essential oil nsed in perfumery. It is cultivated in Ceyion.
cī trŏn'ěl-löl, s. [From Mot. Lat. citronella (q.v.), and Class. Lat. oleum $=$ oil.]

Chera. : $\mathrm{C}_{10} \mathrm{I}_{18} \mathrm{O}$, boiling point $220^{\circ}$. It is isomeric with camphor, and is the chief constituent of oil of citronella. Citronellol unitea with bromine forming a dibronide $\mathrm{C}_{10} \mathrm{II}_{28} \mathrm{Br}_{2} \mathrm{O}$, which when heated splits up into water hydrobromic asid IIBr and cymene $\mathrm{C}_{26} \mathbf{H}_{\mathbf{1 4}}$.
çĭt'-ròn-ize, v.i. [Eng. citron; -ize.] To assume a citron hue. (Ben Jonson: Alchemist, iii. 2.)
¢̧i'-trön-wõrts, s. pl. [Eng, citron; -worts.] Wort, sulf.]
Bot. : Linclley's name for the Aurantiacex.
çít'-rŭl, glit'-rŭle, s. [Citaullus.]
Bot.: The water-melon (Citrullus vulgaris), narned from its yellow colour
çit-rŭl'-lŭs, s. A dimin. fronn Lat. citros, from the colour of the fruit when cut.]
Pot.: A genus of plants belonging to the order Cnenrbitacer. Citrullus colocynthis furnishes the drug Colocynth (q.v.).
git'-rŭs, s. [Lat. citrus; Gr. xirpos (Aitros).] Bot. : A genus of trees, the typical one of the order Aurantiaces. The leaves, which theoretically aro compound, are reduced to a single leaflet, jointed to a leaf-like petiole. The stamens are nnmerous, and Irregularly grooped into several parcels; the fruit a hesperidium has a leathery rind formed of the pepicarp and melearp epicarp and mesocarp, which can easily be separated from the pup below. The endocarp gular divisions, in which pulpy cells are developed, so as to aurround the seeds which are attached to the inner angle. The appropriate aest of the genua is believed to he the inferior ranges of hills in Nepaul and the sub-Himalayas, fron which it mey extend also into China. How many species are distinct is doubtful. Lindley and others think only one-the Citron (Citrus medica), a view to which the advance of Darwiniam aince Lindley's time will probably direct increased attention. There are various distinct forms In the genus Citrua, whether species or varieties, viz., the Citron, already nentioned, the Orange (Citrus Aurantium), the Lemon (C. Limonum), the Lime (C. Limetta), the Shaddock (C. decumana). Other varietiea or sub-varieties are the Seville or Bitter Orange, sometimes called the Bigarade ( $C$. Bigaradia), the Bergamot (C. Bergamia), the Mandarin Orange (C. nobilis), dc. [Bergamot, Citron, Oranoe.]
cit'-ry̆l, 8. [Eng. $\operatorname{citr}(i c)$, and auff. -yl (Chem.) (q.v.).]

Chem.: A name given to the triatomic radical $\left(\mathrm{C}_{6} \mathrm{H}_{8} \mathrm{O}_{4}\right)^{\prime \prime \prime}$ contained in citric actd. The aymbol $\mathrm{Cl}^{-}$is often used to express this radical, as in Citric acid, $\mathrm{Ci}^{\prime \prime \prime}(\mathrm{OH})_{3}$

## çít'-tẽrn, *çǐth-ẽrn,

 *git-tern, s. [The $n$ is excrestent, the word being derived from A.S. cytere Ger. cither, zitter; Lat cithara: Gr. кı日ápá (kith. ara)=a lyre or harp; 1tal chitarra, citara; Prov cithara, cidra; Sp. citara, guitarra.] [GUTARE] A musical inatrument, re sembling a guitar, but strung with wire instearl of gut.For grant the moat barber B. Jontaon: Vition of Delight.

* cittern-head, s. A blockhesd, a dunce, so called from the cittern usually having a head grotesquely carved at the extrein neck and finger-board.
çi-tur, " ģy-tyr, s. [Lat. citrus.] A citron cyiyr tre. citrus."-Prompt. Pare.
"Now plauated I scions of citur tree."
Palladiug vill a
çit'-y, *gete, "gite, * citee, "gitie, "ȩitty, "syte, "cyte, s. \& a. [O. Fr. cite; Fr. cité $=$ a town; Ital. città; Sp. ciudad. from Lat. citatem, an abbreviated form civitatem, acc of civitas $=$ a cily, a state, from civis $=$ a citizen.]
A. As substantive:

1. Ord. Lang.: A large town or collection of housea; a community
2. Spec.: In England, a town corporste, which is the aee of a bishop, and contalus a eathedral church. In the United States, any town incorporated and governed by a mayor and corporation.
3. The inhalitants of a town collectively
"The whole city came out to meet Jesus"-Matt.
iii. 84

IT The City: The central or business part of Iondon, to which the jurisdiction of the Lord Mayor is contined. It is divided into wards, and has a corporation consisting of a Lord Mayor, 25 aldermen, and 206 common councilmen, entrusted with special powers in regard to various administrative mattera.
B. As adj. : Of or jertaining to a town or cliy.
"In thee no wantor cars, to win with words,

I Obvious componnds: City-born, citydame, city-gate, city-life, city-voman, dc.

 civis $=$ a citizen.] Pertaining to a clity, or to Its inhabitants, government, or cuetoms. "At oivic rovel, pomp, aud game". $\begin{gathered}\text { Tennyton: Death of Wollingoron. }\end{gathered}$

## oivio crown, .

I. Roman Ant. : A crown or garland of oakleaver and acorns, given as a mark of public approbation to any aoldier who had in battle saved the life of a comrade. It was considered more honourable among the anclent Romana tham any other crown.

Behind, Rome'a gentas waite with cioick crowns,
And the great father of hiz country owns" ${ }^{\text {ropes}}$; Temple of Fame, 242
2. Arch, : A garlaud of oak-leaves and acorna often uaed as an architectural ornament. (Gwilt.)
çī'-ic-al, a. [Eng. civic; -al.] Civic.
Civical crowns of laurel. oake, and ayyrtle" $\begin{gathered}\text { Browne: Garden of Cyrus. }\end{gathered}$
çǐv'-İc-al-ly̆, adv. [Eng, civianl;-iy.] Civilly; in a civic sense. (Moriey: Rousseau, ii. 185.)
giv'-ics, s. \{The pll of civicused substantively; cf, mathematics, politics, sc.] The scipnce of the rights and ohligations of citizenship.
çiv'-in, * eiv'-ne, * oiv'-III, a. [Fr, \& Sp, civil; ltal. civile, from Lat. civilis $=$ pertainIng to a citizen ; civis $=$ a citizen. $]$
A. Ordinary Language:
I. Iiterally:

1. Of or pertalaing to a city or atsts, or the membera and inhabitants thereof collectively. "God gave them lawa of civil regimen, , . ."-
Hookar: Reclet Polity, bk. iit. $\$ 11$
2. Pertaining to any individual member of a community or city.
""id power. elther out of your natural, or out of your
3. Pertaining to persons or actiona relating to Irivate life, as distinguiahed from those connected with war.
"Fair shine his arms himpory emroll'd:
Shenstone
4ected with secular matters or persons confrom eccleslastical.
"Unto whom the chiet government of all estates of thie reaim, whether they be ecclesinastical or ciek.

* 5. The same as Civic (q.v.).
"With civile crownis" $\begin{gathered}\text { Douglas: } \\ \text { Tirgiu, be wi }\end{gathered}$
II. Figuratively:

Douglas: Virgil, bk vi.

1. Having the manners or habits of a member of a cirilized community; civilized, not rude.
"That wine and ciell Roman ..."-Bition: Areopag
2. Courteoua, affable, obliging in manners or speech.
3. Courteous, not coarse or rude (applied to speech or actions)

* 4. Sober, grave, serious.

Oft covers a good mani! hablt
Beaum. and Flet. ; Beggaris Buet

- 5, Subdued, caln, quiet.

Once I ant upon a promontory
And lieard a mermaid on a dolphin's hack
Uttering such dulcet and harmonlous brenth
B. Technically:

I, Mil.: Intestine ; applied to a war waged between citizens of the same country, and oot with foreigners. [Civil war.]
"Prooper this realm, keep 1 t from civid brolles."
2. Polit.: Connected with, or pertaining to, the internal or domestic government of a state. [Civil liat, Civil senvice.]

3, Law:
(1) Pertaining to an action in a private ouit, as distingulshed from a criminal trial.
(2) Not natural, but only so far as relatea to the rights or privileges of any person as a eitizen.

(3) (See extract.)
partivular mation, commonwealith, or community, hre etahilahed peculiarly for itseelih, or now rore properly distinguished
lie term ctric law beling chlefly nyplied to that which the old Romana ued."-Whartom
(1) Crabb thus distinguishes between civa and polite: "These two oplthats are employed to denoto different modes of acting in occial intercourse ; poltte exuresses more than civil; it is posaible to be civil without being polite: politezess aupposea civility and aomething in addition, Civiity is confined to no rank, age, condition, or country ; all have an opportunity with equal propriety of being civil, but not oo with poititeness, that requires a certsin degreo of equality, at lesat the equality of educstion ; it would be contradictory for mastera and aervanta, rich and poor, learned and unlearned, to be polite to esch other. . Civility ts rather a negative than a positive quality, im. plying simply the absence of redenesa, Folteof requires positive and and scouired . . . The term civil may be applied figuratively, but poiteness is a characteriatic of real peraons only.
(2) He thus diatinguishea between civil, obliging, and complaisant: "Civil is more general than obliging; one is alway a civil when one is obliging, but one is not always obliging when one ia civil: complaisance ia more than either, it refinea upon both; it is a branch of politeness (v. Civil, nolite). Civil regards the manner as well as the action, ohliging respects the action, complaisant includes all the circumstances of the action: to be civil is to please by any word or action; to be obliging is to perform some actual service ; to be complaisant is to do that service in the time and puasant is to do that service in the time and manner that is most autable and agreeable: civility requires no effort; to be obliging
alwaya coats the agent some trouble; complaisance requires attention and observation; a person is civilin his reply, obliging in lending assistance, complaisunt in his attentions to his friends. One is habitually civil; obliging from diaposition; complaisant from education and disposition : it is necessary to be civil without being free, to be obliging without being officious, to be complaisant without being atfected." (Crabb: Eng. Synom.)
civil-arohitecture, s. The branch of architecture which is employed in the conatruction of buildings for the purposes of civil life, such as private houses, warehouses, churches, \&c., in distiaction from military and naval architecture.

Ti For the different ordera of architecture, see Ordfr. See also Column, Corinthiar, DORIC, IONIC, \&c.

## civil death, s. [Civil, B. 3. (2).]

olvil-engineer, s. One who followa the art or scieace of civil-engineering.
civil-engineering, s. The acience or art of constructing machinery for mavufac turing purposes, constructions, and excavations, for general trasisit, as canals, docks, railroads, \&c. It is so called in contradistinction to military engineering, which is confined to war. Other liranches of engineering are mechanical engineering and sanitary engineering (q.v.).

* clvil gown, s. The dress of a citizen or civihian.
civil law, s. The law of a atste, city, or comtry ; appropriately the Roman law comprised in the Inatitutes, Code, aod Digest of Justimian, and the Novel Constitutione. (Blaclistone.) [Roman Law.]

## civil list, s. <br> \section*{1. Originally:}

*1. A list of the entire expenses of the civil government.
2. The revenue appropriated to support the civil government.
3. The officers of the civil government who were paid from the public treasury.
II. In Englnad: The three meanings given above became nore limited in their extent till finally they were confined to the list of expenses, the revenues and the dependents of the crown instead of the country.
T Originally it embraced the list of expenses of the crown, what now would be called the civil service, the army, the navy-everything.

T From the conquest in A.D. 1066 to the Restoration of Monarchy in A.O. 1660, all governmental expenscs, whether those of the governmental the civil officera, the army, or the nary now defrayed from a common fund, furnished partly by the revenues of the unsold crown
lauds, and partly by taxation, the sovereign being left free to spend the monsy with ancontrolled freedom. At the reatoration the military and naval expenses, which dnring war were necessarily great, were deemed oxtraordinsry, snd were withdrawn from the common fond, which was then sppropriately called civil, as diatinguished from military and naval It aupported the royal fonily the jodes the it aupported the raya fiy, tha judges, th various pensioners, sc. In 1830 the Clivi Liat was limited to the chargees reqnired for the overeign and his dependents. On the accessiod of Queen Victoria arrangement wha made akain regardiog the Civil List, and in December, 1837, it was settled at $£ 385,000$. In 1881 it amounted to $£ 4$ (r, 468 .

## civil remedy,

Law: That given to a person infured by action, as opposed to criminal prosecution.
civil servant, s. A coveranted nonmilitary servant of the crown.

## civil service, s.

I. That branch of the public service which Includes the covenanted noo-military servants of the government.
2. The body of civil servants collectively.
civil service reform, s. Officers in the Civil service of the United States were appointed by the President or Heads of Departments until 1883, when a Civil Service Retorm bill was passed for the purpuse of dolng away with the in fficiency resulting from this method asd the political nse made of it. Tbis juw required that candidater for all except certain leading positions shonld be subjected to a Civi Service Examioation, and those who passed best be appointed to the positions, withont regard to political affiliation. Tlie law has Worked well, though it has not been strictly
observeld. observel.
civil state, $s$. The entira body of the lalty or citizens, as distinet from the military, ecclesiastipal, and maritime. (Craig.)

## civil suit, $s$.

Law: A auit for a private clain or injury.
nolvl-suited, a. Modestly, not gaudily arrayed.

Thus, night, oft zee me in thy pale career.
Till cisil-suited moras niment
on: 1 Pentors, 121 civil war, s. A war between citizens of the same country
I The passate of the Rubicon by Julius Cæsar, which commenced the civil war between him, and Pompey, took phace in January, 48 b.c. The battle of Pharsalia, which decided its issue, was on August $9,48 \mathrm{Bg}$ The assassination of Julius Ceesar, which led to the immediately ancceeding civil war, was on March 15, 44 n.c., and tha sea-lght of Actium, which finally decided its issue, oo September 2, 31 b.c.
Coming to England, the first battle of St Albans, the earliest in the wars of the Roaes, was in A.D. 1455. That civil war nay be supposed to have extend do the battle of Bosworth, August 22, 1485, and the accession of Henry Vil., in whom the Houses of Lancaster and York, the antagonists in the late strife, were united. The lirst battle in the civil war which produced the Commonwealth and the Cromwellian Protectorate was that of Edgehill, Octoler 23, 1642; that of Nasehy, which decided the issure, was on June 14, 1645, though the struggle cannot be saill to have finally terminated earlier than the accession of Charles II., who was proclained king on Miay 8, 1600.
The capture of Fort Somter, at Charleston, in South Carulina, by the Secessionists, which was the first nilitary operation in the American civil war, Was on Apriil 13, 1861. The surrender of General Lee to General Grant, on April 9, 186.5 , and that of Geueral Kirly Smith, commandant of Gaiveston, on June 5 of the same year, were its final seenes.
civil year, s. The legal sear, or annual cecount of time which a government sppoints to be used in its own dominions, as distingulslied from the antar year, measired by tho revolution of certain of the heavenly bodies.
(Wherell.)
ģiv-ŭl-à-tion, s. [Fr., perhape corrupted from civilization.] Intoxication. (Cant.) "Io a ratate of etellation."- De Quixery.

## gi-vil'-l-an, s. \& a. [Civin]

A. As substantive:

1. Ord. Lang.: One who is engaged in the pursnits of civil $11 \mathrm{f}_{\mathrm{s}}$, as distingulshed from one whoes profession is war.

## 2. Lato

(1) A student of the civil law at a university or college.
"Ho ehanged bis componer's gown for that of a (2) A professor of Roman law and general equity.
*3. Theol. ; One who despises the righteousness of Christ.

† çīv'-ǐ-li-za-ble, a. [Eng. civiliz(e); -able.] Capable of being civilised. (Chambers.)
çī-11-1̀-zā-tion, s. [Fr. civilisation.]

1. Ordinary Language:
2. The act or process of civilizing.

- Not used in Johnson's time in tha semae in which we now employ it. The only meaning assigned to it in the edition of his dictionary published in 1743, the last which received his correctiona, is the legal defmition given below. [1I.]
$"$ it had tho most salutary consequences in anssisting

## 2. The state of being civilized; refinement.

 ". orming ocpithed with taning the wild earth, and per sitir d. $c$ Leutis: 0 , the Induence of Authority in 3 atters of opintom, ch. 11 .5 Civilization consists in what may be broadiy called culture in a ration; and a nation may be considered as civilized, when a large proportion of those belonging to it have their intellectual ant moral faculties and all their higher natire in large measure developed and becoming increasingly so with the advance of years. Before this can take place, a considerabla amonut of material prosperity must have been nehieved, between which and the culture already described there are continual action and reaction.
At present barlarism, semi-civilization, and civilization are seed contemporaneously existing in the world, sud the question suggests itself, How has this phenomenon been produced? 1 n solving it inquiry needs to lie made as to the original state of man. Individuals can move back ward as well as forward in "ultura, and it is axiomatic that those sggregations of individuals called nations or rices can dn the aame. The mass of men in this country believe Scripture to have decided that the present Iropulation of the earth has aprung rom Noah is family, and that he and his housecontrary view that the fromi hariarism. The was a barbarous one, an opmion geverally held
by the oid Romane, has of Inte been revived and hse been embraced by many Darwinian and others. The Duke of Argyle hes ably de fended the mare common hylpothesia, whilist that recently revived ia atrongly msintained in Sir Jolin Labbock's "Origin of Civilization" (1870), Dr. Edward B. Tylor'a "Primitive Culture" (1871), and other publications.
Regarding progression in material prosper ity, certain atagea tend to occur: (1) a barberoue one, in which one feeds on roots. Iruits, and flahes, when these laat ean be caught with out effort; (2) the atate of a bunter; (3) that or the ahepherd, to which, to avoid the nncer tainty of the result in hunting, wild animale are domesticated; (4) the agricultural etate, and (5) that of manufacturee and commerce. Iegarding mental advance, M. Anguste Comte in publications issued between 1830 and 1854 maintained that nationa necessarily passed maintained that natious necessarily passed positive or scientiffc atage. Littre in France (1845), and Backle in England (185i-1861) ably and earnestly anpported the same view.
*II. Law: A law, ect of justice, or judgment, which rendera a criminal process civil; which is performed by turning sn information into an inquest, or the conirary. (Harris.)
IT For tho difference between citulization and cultivation, aee Cultivation.
çiv-II-ize v.t. \&\&. IFr. civiliser; Sp. \&Port. civilizar; ltal. civilizare, from Lat. civilis $=$ civil.]

clailk, r.i. [Clock.]
clailk (1). s. [CLock, v.]

1. Lit.: The noise made by a hen.
2. Fig. : An idle or false report.
"And sure if that's nae mae the country a to HonDg Ket and you ",
Moriton: Poema, p . 187 .
claik (2), clack, "clak, 3. [Etym. doubt fil, perhapa the same as clack (1), s.] A hirl the Bernicle-goose.
"Reatia now to spelk af the geis generit of the see
claik - goose, s. [BERNICLE - coose.]
(Holland: Crmden, it. 48.)
clāik'rǐe, s. [Scotch claik = Eng. clack, and suff. -rie $=$-ry.] Tattling, gossiping. (Scoteh.)
claim, "clame, " clayma, cleymen, v.i. \& t. [O. Fr. clamer, elaimer, cleimer $=$ to call or ery out; ltal. clamare; Port. clamar from Lat clamo.]
A. Intransitive:

- 1. To cry aloud.
"Opon the, lady, I clayme for helpe"-Patsgrave.

2. Tu demand as a right or as a due ; to call for anything authoritatively; to assert a claim.
"Wo must know how the first raler, from whom one clatmo came hy his anthority, . . "-Locke.
B. Transitive:

- 1. To call, to name.

2. To demand as a right or as a dne, to require authoritatively.

We clayme this our heritnge."-Langtoft, y 185. - Claiming respect yet waving state,

Seott : Liokeby, v. 2s.
3. To seek for, not as a right or as a due, but as Iromised or assured.
"Alle called on that cortayne and claymed his grace."

- Crabh thus distinguishes between to as or ask for, to claim, and to demand. "Ask, in the sense of beg, is contined to the expresaion of wishes upon the part of the asker without involving any obligation on the part of the person asked; all granted in this case is voluntary or complied with as a favour : but ash for, in the senso here taken, is involuntary, and springe from the forms and distinctions of society ... To ask for denotes aimply the expressed wish to have what is considered as due; to claim is to assert a right or to make it known; to demand is to insiat on having without the liberty of a refusal Asking for supposes a right not questionable ; claim supposea a right hitherto unacknowledged : demand aupposes either a disputed right [not always] or the absence of all right and the simple determination to have." (Crabb: Eng. Synon.)
clälm, * clame, * cleyme, s. [O. Fr. clatm: Low Iat. clomeum, from lat. clamo $=$ to call or cry ont.]

klaskac.]
A. Inlransilive:
I. Literully:

1. To make a loud noise by striking against comething.
+2. To come into collision with another body.
"Those few that should happen to clash, might ro-
+3. To make a loud clashing noiso.

## - Selve the loud, voelferoune bells, and <br> Clashing. clanging. to the pavement Bongfellove: (Gold. Leg.; Protogue.

4. To throw dirt. (Scolch.)

IT To clash up: To cause one object to stick to another by means of mortar or aoything similar. It generally implies the idea of projection on the part of the object adhering. (Scotch.) (Jamieson.)
II. Figutatively:

1. To act in opposition or in a contrary direction; to interfere, to come into collision (generally followed by the prep, with).
"The multiplicity of the laws hindered their execu.
tlos; rival courts clas Early and Middle dges of Engiand, ch. xxxiii
2. To chatter, to gossip, to tell tales. (Scoteh.)

## "I will not atay to elauh and quibble

I The prep. with is frequently added.
 A creepiag thing, the Hze of thea"
Ramsen: Pooms ii a
B. Trans.: To cause anything to give out a loud ooise by striking it violently against another.
High oier the chief they clayhod thelr arms in air.
And, beaning trom the clouds expect the war."'
Pope: Homer ; liad xi. so.
clăsh (1), s. [Clash, v.]

## I. Literally:

I. A lond noise caused by the violent collision of two bodies.
"The clash of arras and $\begin{aligned} & \text { Potce of men we hear." } \\ & \text { Denharn : Deatruction of Troy. } 280\end{aligned}$
2. A quantity of any soft or moiat aub stance thrown at an object. (Seotch.)
"Poor old Mr. Kilfudty-got such a clasth of glar on
the gide of his face, that hise ege was almost extio suished. -Amals of the Parish. p. 12.
3. A dash, the act of throwing a soft or moist body.
4. A blow
II. Figuratively:

1. Opposition or contradiction as between diverging or opposite views or different interests.
"In the very next line he reconciles the fathers and
scripture, nud shews there is no elash betwite them." scripture, ,nd shews there is no clash betwixt them.
2. Idle stories, gossip, evil speaking. (Sioteh.)
"There's ne doubt oo that, though there are many
dile elashes a bout the way and manner."-Scott: Guy mannering. ch. yil.

* 3. A blow or puoisbment.
olăsh (2), claisch, s. [Gael, cloisich $=\mathrm{a}$ furrow, a trench.] A cavity of considerable extent in the acclivity of a hill. (Scotein.) (Jamieson.)
clash'-ẽr, s. [Eng. clash (1);-er]

1. Lit.: Ono who causes a clash or lond noise.
2. Fig.: A tale-bearer, a gosaip, a tattler.
clăsh'-ĭng, pr. par., a., \& s. [Clast, v.]
A. \& B. As pr. part. \& particip. adj.: (In senses corresponding to those of the verb).
"This experijuent will enahle you to figore to your Beimen (srd ed.), iv. zL
C. As substantive:
I. Literally:
3. The act of striking anything with vio lence agaiast another, so as to cause a lond toise.
4. A lond noise cansed by the striking of ons body against another; a clash.

* II. Fig. : Contention, dispute, contradiction.

elăsh'-ĭng-Ĭy, adv. [Eng. clashing; -ly.] In a manner such as to cause a clashing.
clasp, * claspe, * clesp, s. \&s a. [Cwase, v.]

## A. As substantive:

1. Literally:
2. A flattened catch or hook used for holding together the ends or parts of snything, as the covers of a book, the edges of a cloak, de.
and. shatting the claspes with the utmoat eam-
posure, left vil quite nst

* 2. A grappling-iron, a grapnel.
"Claspe or grapelynge yrom, to close shippes to-

3. Spinning: A device consisting of two horizontal beama, the upper one pressed upon the lower, or lifted for drawing out the thread of cotton or wool.
II. Fig.: A close embrace, a hug, a grasp.
"To the gross clasps of a lascivious Moor."
B, As adj. : (See the componads).

## clasp-hook, s.

1. A pair of hooka moving upon the same pivots, and forming mousing for each other. (Knight.)
2. A peir of tongs the jaws of which overlap each other.
clasp-knife, s. A large pocket-knife, the hlade of which shuts into the hollow portion of the handle.
clasp-1ock, s. A lock which fasteas with a clasp or spring.
clasp-nail, s. A square botied sharpwrought uail, the head of which has two pointed spurs intended to siak into the wood.
clasp, * claspen, * clapsen, v.t. \&i. [Ar extension of clap, clip, or clut $=$ to embrace.]
A. Transitive:
I. Lit.: To fasten or ahut, as with a clasp or buckle.
"I cluspe or grapyll bast tokyther."-Palsorave
II. Figuratively:
3. To enclose, to embrace or grasp.
"Thes claspod his neck. they kissed his cheeks"

* 2 To span, to enclose between the ex tended arms or hands.
"Ocession turneth the handib of the bottle first to
be received: and arter the belly, which is hard to be received; and riter the belly, which is hard to
+ B. Intrans. : To cling.

$$
\begin{gathered}
\text { The clasping ivy wherett climb.". } \\
\text { "Niton: P. E., ix. } 21 \mathrm{~A}
\end{gathered}
$$

F Crahb thus distinguishcs between to clasp to hug, and to embrace: "All these termis are employed to express the act of enclosing anemployed to express the act of enctosion one's arms : clusp marks the action other io one's arms : chasp marks the action when it is performed with the warmet of clasping, affection; hug is a uldicrons sort of clasping,
which is the consequence of ignorance or extravagant feeling; embrace is simply a mode of ordinary salntation. . . . Ia the continental parts of Europe, embraciag between males as well as females is universal on meeting after a long absence, or taking leave for a length of time." (Gratb: Eng. Synon.)
clasped, pa. par. or a. [Clasp, v.]
clasp'-ẽr, s. [Eng. clasp; -er.]
L Ord. Lang.: One who or that whtch clasps or embraces anything.
II. Technically:

1. Bot. : The tendril of a creeping plant, by which it clings to other things and stapports itself.

## "The tendrils or claspers of plants."-Ray.

2. Zool. : A special copulatory organ, usnally a modified limb, existing in some insects, molluses, crustaceans, and fishes.
"The malea of Pingiostomons fishes (aharks, rask) and of Chluzerold fishe are vroyided with clappers

clasp' ëred, a. [Eng- clasypr; ed.] Furoished or provided with tendrils or claspera.
clasp'-ing, pr. par., a., \& s. [Clasp, v.]
A. \& B. As pr. par. \& particip. adj.: (See the verb).
C. As subst. : The set of fastening with a clasp; the act of embracing; an emhrace.
"Your untimely clanpings with your child,",
clasping-root,
Bot.: A secoudary root apringing laterally
from, the atein or from the primary rook Example, Ivy
clasps, \& pl. [Etym. donbtful.] An inflem mation of the termination of the aublingua gland, which furnishes the saliva ; a diseass vearded forage.
classs, \& \& a. [Fr. \& Ital. classe; Sp. clase from Lat classis = a number of people, s feet

## A. As subztantive:

L. Ordinary Language:

1. A number of persons ranked together as being distinguished by the same character istics, or coming under the same natural conditions and circumstances.
"Segrals han distiugulghed the readers of poetry classes."-Dryden.
2. A number of persons temporarily classed together for the purpose of instruction, or as the result of examination. [Class-man.]
3. A variety, a kiad or description.
" She had lost one clase of eoergies and had not yet
acquired another.--Macaulay: Mist. Eng., ch. Iv. II. Technicatly:
4. Roman Archoeol. : Any one of six divisions of the people made by Tullins Servius, about B.c. 573.
5. Eccles. : The same as Classis (q.v.).
6. Bath. Geom.: The elass of a curve is the number of tangents which can be drawn to it from any point. Thus, if five tangents can be drawn to the curve, it is said to be of the fifth class.
7. Zool. \& Bot. : See Classification.

T Crabh thus distinguiahes between class, order, rank, and degree: "Cluss io more general than order; degree is more specific than rank. Class and order are said of the persona whoare distiaguished; rank and degree of the distinetion itself; men belong to a certain class or order: they hold a certain rank, they are of a ceriain degree. Among the Romans all the citizens were distinetly divided into classes according to their property; but in the modera constitation of aociety classes are diatinguished from each other on general, moral, or civil grounds; there are reputable or disreputable classes; the labouring cless, the class of mer classes; the labouring cliss, the class of mer-
chants, mechanies, \&e. Order has a more parchants, mechanics, de. order has a more piar-
ticular signification: it is founded upon some ticular signification it is founded upon some positive civil privilege or distinction; the
genersl orders are divided into higher, lower, genersl orders are divided into higher, lower,
or middle. . . [Thongh we say the lower orders or classes, yet the expression the upper classes and the middle classes is the common one, and the term orders is rarely used of them.] Rank distinguishes one individual from another; it ia peculiarly applied to the nobility and the gentry, althongh every man in the community holds a certain rank in relation to those wbo are above or lielow him. Degree, like rank, is applicalle to the individual; but only in particular cases; literary and scientific degrees are conferred upon snperior merit in different departivents of science. There are likewise degrees is the same ranj, wheace we syeak of men of high and low degree." (Crabl:Eng. Symon.)
B. As adj. : (See the componnds).
class-fellow, s. One who is for the tiute a member of the same class or group united for purposes of instruction.
class-man, 8. A term in uae at Oxford for one who is placed by the examiners in an booour class, as oplosed to pass-men, who are not classified at all.
class-mate, s. A clasa-fellow.
"He was always among the leaders of hls dast
mates."-Trans, Amer. Philos, Soci، 18is, vol. syil. p. 183
olass, v.t. \& i. [Class, 8. ID Fr. classer.]
A. Transitive:

1. To arrange in a class; to groap sccording to different characteristics or natural distinctions.
"I considered that hy the classing and methotking
such passapes, I might luatruct the reader."-A rbath not: On coind
2. To form into or place in a class, or number of persous temporarily associated for purposes of instruction.
3. To assign a certain atanding or position to, after examination

* B. Intrans. : To be grouped or arranged to

alass; to mill naturally into a cortain dividione or group.
T Crelh thus distinguishes betwren to class, to arrange, and to rangs: "The gemera, quanties and sttribntes of things are ata by each other must be considered in arranging; their capanity for forming a line is the only thing to be attended to in ranging. only thing to be attended to in ranging. Classification eerves the purposes of science; ment; ranging those of general convenience: ment; ranging those of general convenionce: nen are classod into different bodies according to some certain standard of property, power, edncation, occupation, sec; furniture is ar ranged in a room according as it answere either in colour, shade, convenience of sitas tton, de.; men are ranged in order whenever they make a processton . . . Whes applied to spiritual objecta, arrangement is the ordinsry operation of the mind, requiring only method. cal habita: classification is a branch of philosophy which is not attainable by art only; it reqnires a mind pecnliarly methodical by nature, that is capable of distinguishing things by their generic and specific differences; not aeparating things that are alike; nor hot aeparating things things that are differeat ; books are hended in classed io a catalogue according to their contents; they are arranged io a shop according to their size or price; they are ranged $\ln$ a counter for conveulence." (Crabb: Eng. Synon.)
clamsed, pa. par. or a. [Class, v.]
t class'-1-ble, a. [Eng. class; -able.] Ceppahle of being classed or assigned to a certain group or division. (Eclect. Rev.)
olams'-1c, $\alpha$ \& s. [Fr. classique; Itsl. classico; Lat. classicus = belonging to a classis or division of the Roman people, and especially to the first division. The Roman citizens were divided into several classes, a man of the higheet of all being emphatically called classicus, that 1 s , of the class pre-eminently so designated-the highest in the scale. (Trench: On the Study of Words, pp. 196-7.)]
A. As adjective:
L. Ordinary Language:

1. Literally:
(1) Of or belonging to the first class or rank, atandard ; superior in authority or dignity.

(2) Of or belooging to the ancient Greeks and Romans, specially of their anthora and writers, but also of their localities.
"Though throned midet Catium s clastc plalns 2. Fig. : Pure, chaste, refined.
II. Eccles. : Of or pertaining to the order and rules of the Presbyterian Church.
B. As substantive:
2. (Generally used in the pl.): Greek and Latin literature or anthors.
3. A writer of modern times of acknowledged excellence and authority.
"His polltical trate woil demorve to be studied for their literary merit, and folly entitle him to a place 3. One learned in the literature of Greece and Rome.
classic orders, s. $p$ p
Arch.: An epithet applied to the styles of architecture introduced by the anclent Greeks and Romans. These are Doric, Ionic, and Corinthian.
cllaser-10-al, a. [Eag. classic; -al.]
A. Ordinary Language:

L Literally:

1. Of or pertaining to a classia or divialon of a people or things; classiticatory.
2. Of or pertaining to the literature of the anciont Greeks and Romans; classic.
"A vary slender provislon of classioal learning."-
3. According to or founded on the classic anthore; pure, refined.
II. Fig.: Of standard and acknowiedged authority.
"Froma this standard the value of the Roman weights and eoins are deduced: in the wettling of which I harre
 coastic
corne.

## B. Ecclas. : Of or pertaining to a classis 

alłas'-io-al-imm, s. [Eng, classical; ism.] A classical atyle, idiom, or expression; a classicism.
$\dagger$ clams'-Yc-al-Ist, s. [Eng. clausionl; -iat.]
Art : One derotad to classicalism ; one who ocrupulously adheres to the canons of clasalc art. (Ruskin.)
clăss-1-căy'-1-tyy, s. [Eng. clussical; - 1 ty.] 1. The quality of being classical; classical ness.

## 2. Classical knowledge.

preeseit vispeared than the to matho other object for hin
 -Forefon Quarterly Review, No. 1.
alass'-Yo-a1-1y, adu. [Rng. classical; -ly.] * 1. According to classes, by wey of classes. "If they were not clanoically arraaged."-Ker.
$\dagger$ 2. In a classical manner ; according to or in the manner of the classic authors.
class'-l-oal-něss, s [Eng. classical; -ness.] The quality of betng classicsl.
† clăss'-1-çism, s. [Eag. classic ; -ism.]

1. A classical idiom, expression, or style.
2. An affectation of or prefersnce for classical authors or Idioms.
"Cathollifism, clasticimm, mentimentalism, cannibal.
 tusion ph. Ui., Wk. v., ch
olass'-1-çist, s. [Eng. classic; -ist.] One akilled or learned in the clasaics. (Hallam.)
clăsg'-1-fī-a-ble, a. [Eag. classify; -able.] Capable of being classed or arranged sccord lng to classes.
"These changes are classiftable as the original sense
olăss-If'-Ic, a. [Lat. classis $=$ a class, and facio (pass. fio) $=$ to make.]
3. Consisting of or constitatiag a class or diviston.
4. Reiating to classiffcation
clags-if-1-ca'-tion, s. [Formed on analogy from classify (q.v.).]
5. Ord. Lanq. : The act of hringing Into or arranging in classes or erders.
"Io the elasification of the citizens, the grast theisistors of matiquit
6. Nat. Science: Animala, plants, and minerals are carefully classified by naturalists. Thongl the nse of the term classificstion may seem to imply that these are placed in classes only; yet these are only one of the numerous designatlons of the several categories in which they are placed. Linnæus arranged all natural objects in the carth under the head Imperium Nature (the Empire of Nature). He divided it into Pegnum animale (the Animal Kingdom), Regnum vegetabile (the Vegetable Kingdom), and Regnum lapideum (the Stony or Mineral Kingdom). Each is next divided by him into Classes (Classes), Ordines (Ordere), Gencra and Species, what are now called varieties being occasionally discriminated. His categories, larger or amaller, were consequently aeven: Empire, Kingdom, Class, Order, Genus, Species, Variety. The most comprebensive term now eimployed in zoology is Subkingdorn, immediately below which comes the Phylum (a term very generally aubstituted for Clasa, and intended to alow genetic rela. tionship), theo Order, Family, Snh-family, tionship), theo Order, Fanily, 8nh-family,
Genus, Genus, Species, and tinally
species. Synoaymons terma, such as or gronp, pection, sub-section, \&c., are sometimes used in licu of some of those given above. The namea of zoological fanilies ahantd properly end in id $\alpha$, and sub-families in ince, and in botany alliances end in ales and orders as a rule in ncea. Uaiformity in anch terminology is very desirable, and the present practice is in that direction.
9/ For the difference between natural and artificlal syatems of classification, see System. For particular syatems, now obsolcte, see Binary and Quinary. As bearing on present views of the philosophy of claasiticstion, see also Darwinism, Species, \&c.

In classifying animals or plants, care must
be takes to dietinguish between analogy and afinify (see these orde). it is only when there is affinty between two species, two genera, \&c., that they shonld be put together. A Unear classification is not cornformabie
to natnre. For the binomtal method of to mature. For the binomtal method of
naming ohjects of natural science, see Nomes clature
$t$ alłas'-1-fi-ca-tõr, s. [Mod. Lat.] One

olăs'-tǐc, a. [Gr. кגaorós (klastos) $=$ broken.] clastio rocks, s. pl. Clastic or fragmental rocks are divided by Naumann int psephitic, psammitic, and pelitic. They are composed of materials derived from the waste of various rocks. Sandstones and grits differ from breccias and conglonerates merely in the size of the fragments of which they are composed, and therefore should bo included among the clastic rocks. (Rutley: Study of Rocks.)

- clăt, s. [Clod, Clot, 8.]

1. That which is raked together.
"What are all mee on earth, but a number of

2. An instrument for raking together mire, weeds, \&c. ; A hoe. (Sir Walter Scott.)
3. The set of raking together.
clat, olaut, olawt, v.t. [Clot, v.]
4. Lit.: To clesn, to acrape; to rake to gether. (Scoteh.) (Sir Walter Scott.)

5. Fig.: To accumolate by griping or by extortion.
"We heo heard shoot thin gatr distress.-Here is ont o the widow's house. ${ }^{-1}-4$ y makay, p. 65 .
alătçh, v.t. [Clat, v.] (Scotch.)
6. To daub with lime.
7. To close $n p$ with any glutioous or adlieaive anbstanca; as "to clatch up a hole," with slime, clay, \&c.
8. To finiab any plece of workmanship $\ln _{\text {a }}$ careleas and harried way, withont regard to the rules of art. In this sense a house or wall is said to be clatched up, when the workmen do it in such haste, and so carelessly, that there is little prospect of its standing long.
oljtgh, s. [Clatch, v.]
9. Anything thrown for the purpose of daublog : as "a clatch of lime," as much as is thrown from the trowel on a wall. (Scotch.)
10. Any piece of mechanical work done in a careless way. Thus an ill-built house is asid to be " a mere clatch."
11. Mire raked together into heaps.
12. A dirty woman ; s drab. (Scotch.)
olăth-rär'-1-a, s. [Lat. clathrt (pl.) $=\mathrm{a}$ trellis or grating, especially to the cages of
 (kléthron) $=$ a bolt or bar for closing a door cheim (kleit) $=$ to shut; and Lat. fem. sing. snff. -aria.j
Palront.: Originally proposed by Brong. niart for a group of planta from the coal measures, now included in Sigillaria, afterwards applied by Mantell to some Cycadean stems which he found in the Wealden beds of Tilgate Forest. From the alternating large and small kears on the stem they are believed to be sllied to the genus Cscas. Nothing is nown with ecrtainty as to their foliage and fruit, thongh leaves and single nuts have teen found in rocks of the same age which may belong to them. Eight species are known from beds of secondary age.
clăth'-rāte, a. [Lat. clathri, clatra = bars, lattice; Gr. $\kappa \lambda j \theta_{\rho a}$ (klethro).]
Bot. \& Zool. : Presenting the sppearance of lattice-work
clăth-rǒ-çy̆s'-tïs,s. [Gr. $\kappa \lambda \tilde{\eta} \theta \rho a$ (klēthra) pl . $=$ lattice-work, and кúбтıs (kustis) $=\mathrm{a}$ bladder.]
Bot.: A genus of Palmellaceous Algx. The plants occur in immense abundance in freshwater ponds, which they make appear grassgreen.
cláth'roid, a. [Lat. clathri $=$ lattice work ; sufi. -oid.] Clathrate (q.v.).
 lattice-work; sod $\pi$ ópos (poros) $=$. . . a ['Rs. sage, a pore.]

Palcont.: A polyzoon from the Upper Silurian and Devonian rocks.
 $\mathrm{pl}_{\mathrm{p}}=$ lattice-work, and $\pi \tau \in \rho!{ }^{\prime}(p$ teris $)=\mathrm{a}$
Paloont.: A genus of fossil ferns. Clathropteris meniscioides is found in Mesozoic rocks in scavia.
clăth'-rōse, a. [As if from a Lat. clathrosus.] Entom. : Having deep striæ ernssing each ather at right angles. A good example of this occurs in the abdomen of some of the Staphylinida.
olăth'- ru-lāte, a. [Morl. Lat. clathruli = fine lattice-work; ate.] Marked with very fine lines crossing each other at right angles.
clath-rul-Li'ma, b. [Clathrtlate]
Zool. : A genus of Protozoa, belonging to the Heliozoa, or Sun Animalcules. The body has a globular, siliceous clathurate shell, and is supported by a stalk.
clatt' ẽr, 'clăt' ẽr, v.i. \& t. [Dut. klateren $=$ to rattle, to clatter; kloter $=$ a rattling, 8 clatter. A frequent. form of clack (Skeat).] A. Intransitive:

I Lit: To emit a rattling noise, as when two bodies are struck together: to rattle.

Of the goodesne clatroen in thate and rynge."

- An buudred dosi haped chaucer: $C . T$. 2,850
"An buudred dogs baged deep and strong, Clattered an haudred steels alougt." Lake, i.
II. Figuratively:

1. To chatter, to talk idly and noisily.
"That none of ge ciatter ne calle."- Tomeley Myrc., p. 216.

Here ha a great deal of good matter
Now, wiker, 1 noo thou do sit hat elatter
2. To blab, to lat out a secret.

Cooncel owght to be kept and not to bo clatrid.
Children bea ay clatringe as thoa knowent",
B. Transitive:
I. $L$ Lt. : To knoek two bodies together so as to cause a loud rattling noise.

II. Technically:

1. Min. Clay ts composed of bydrous silh cate of aluminium, usually with a mechanical adouixture of sadd, iron oxides, and other substances. Io the earlier mineralogies clay figured under that eimple name as a mineral genus with many sprecies nnder it, or as a species with many varieties. Thus in the second edition of Phillipa's "Mineralogy" eighteen ninerals 日gure as kinds of clay. Ia tha fourth edition (1837) - thai by Robert tha fourth edition (1837)- that by Robert Allan, F.R.S.E., ${ }^{\text {\&ec.- }}$ these sre reduced to
thirteen, viz.: (1) Slate-clay or ghale, (2) Adhesive slate, (3) Polishing Slate, (4) Llihomarge, (5) Euller'a Earth, (6) Tripoli, (7) Bole, (8) Lemnian Earth, (9) Cimolite, (10) Mouctala Meal, (11) Black Chalk, (12) Pipe-clay, and (13) Potter's Clay. In Dana, clay of different kinds figures simply as a synonym of various minerala. In the "British Museum Catalogue" there is a category of clays. A great many minerals have noore or less of alamina in their composition; its presence may ofted be detected by the peculiar smell which the mineral emits when breathed upon. The colour of clay chiefly defenda upon its containing the iron in a ferrous or a ferric state. Some of
the dark-coloured oolitic clays contaln large quantities of a bituolinous matter; these quantities of a bituolinous matter; these
clays give off a most offensive odour wher clays give of a
2. Chem. : Clay is principally hydrous sfilcate of alumioium, $\mathrm{Al}_{2} \mathrm{O}_{3}{ }^{2} 2 \mathrm{SiO}_{3} \cdot 2 \mathrm{H}_{2} \mathrm{O}$. The purest elay is called Kaolin ( $\mathbf{y} . \mathrm{v}$. ). Clays generally contain much free silica, alsocalcium carbonate, calcium sulphate, oxide of iron, magnesium carbonate, and small quantilie of alkaline salts, phosphates, and iron pyr ites. Fire-clay is more refractory the greater the percentage of alumina which it contains in proportion to the fluxes (alkalies,

Mkaline: earths, snd ferrous oxde), and the maller the quantity of the silica in proportion to the silicate of aluminum. Clay possesses the property of abisorbing ammenia and organic matter, sc, from iquid sewage applied to its surface, and thus not euly pro motes the growth of sorieultural crops, bnt loo prifies water percolating slowly through loo parisalyo of of Chem., 2nd Supt., p. 335.
3. Geol. \& Palcont.: Clay is almply mad produced by the wearing down of rocke. I stream bring down eediment into still water the heavier bonlders fall first, the pebbles next, then gravel after which ittle remain but fue silt which makea the water look turbid for a time, but gradualiy eettles down at the bottom, end becones mud or clay. Clay suspended in water is precipitated by the saddition of sea-water. -Sterry Huat made experiments on the water of the mississippi. (Chem. News, xxx., p. 97.) Mississippl. (Chem. Newe, XXX., p. 97.) Hence. the doposits of the river iato the Gulf of Mexico Whence of the river iato the Gulf of Mexico. When hardened into a thinly laminated rick, and perhsps coloured black by carbonaceous
matter, it becomes shale. A form of it called Fire-clay exiats in the coal measnres just beaeath each seam of coal ; it constituted the vegetable seil ia which the sacient forest, the remains of which have been transiormed jate coal, grew. Whilst sardstone is, as s rule, too porone to ratsin fosails unimjured, clay, ehaie or anything eqnivalent does so admirably, and palæoutelegiat should give particnlar attention to every finely laminated atratum which e may see in any eeries of rocks. which he proposes to examine.

- For Barton clay, Kimmeridge clay, Oxford day, Plastic clay, \&c., see these words.
B. As adj.: Compesed of or pertaining to clay.
* olay-bratned, clay-brayned, a. Btupid, idiot.
"Why, thon eloy-braynod guts."
clay-built, a. Conatructed of or with clay. (Darwin.)
clay-clot, clel-clots s. $\Delta$ clot or lomp of clsy.

## * clay-cold, a. Cold and lifeless as a lump of clay.

* clay-daubed, * clai-danbed, a

Daubed or smeared over with tempered clay.
clay-eater, a. One who hakitually chews or eats a fatty clay. This practice prevails in many places 'throwhout the 'world, and to many placas mong the lower classes in Georgis and tha Caminas.
clay-ground, s. Ground or land of a clayey nature, clay-tand.
clay-Iron ore, s. The same as ClayIRONSTONE (q.v.).
clay-ironstone, 8 .

1. Min. \& Geol.: A mineral or rock occurthy generally in the form of bands or nodules in the carhoniferona series of beds. It consists of carbenste of iron mechanically mingled with earthy matter, the matallic carbonate having beeu produced by the action of decaying vegetable matter on any protoxide of iron in solution with which it may have been brought in contact. (Lyell.) Occurs priacipally in the cesl measures.
2. Palcont.: Nodules of elay-ironstone often enclose shella, encrinites, ferns, and other organiama.
clay-kiln, s. A kiln or stove for burning clay.
clay-land, clay-soil, s. Ground or land compresd to a great extent of clay.
clay-loam, s. Clay mixed with sand, chalk, and organic matter. It is generally very fertile.
clay-marl, 3. Marl with tha argillaceous element abnormally ahundant in it. It is generally white and chaiky ; marl is a mixture of clay sad chalk.

## clay-mill, 8.

Brich-making: A pog-mill ; a mill formixing and tempering clay.
olay-pipe, s. The same as a Tobacco TPE.

## clay-pit, s. A pit whence clay is dug.

Hy
clay - process, 8 A. Arocess by which clay ia substituted for plaster in making
stereotyped moulda. The face of the type la stereotyped moulda. The face of the type
forced into the clay by pressure. (Kmight.)
clay-pulveriser, s. A machine for grinding dry clay to render it more homogenealls previous to prgging. ( $K$ night.)
clay-soreening, $\alpha$. Screening or desigued to screen clay.

Clay-screening machine: A machlue for sifting julverised clay, 60 ss to prepare it for some of the finer cersmio manufactares. (Knight.)

## clay-slate, 8.

1. Geol.: A rock, called also Argillaceous Schist. It is often exceedingly fissile, cleay ing in directions across the planes of atratifi cation. Its colours vary from greealish or bluish-grey to a leaden hue. It is composed of indmrated clay which nas been anbjected to great pressure. Sometimes partlcles of mica impurt te'it a shining and silky lustre. The yellow cubieal minersl of metalic lustre often scattered through it is iren pyrites. A great part of it is matamornhic, but some is great part of it metamorphis, but some is belong to the Palreozoic age.
2. Comm. : It Is the common roofing slate for which its fissile charscter renders It wel adapted. It is used slao for school-boys alatea. Good slatea ghould not imhibe water if they do so, they will soon be decomposed by the weather

## olay-stone, e. \& a. <br> \section*{A. As substantive:}

Geol.: A folatone of granular textare, sud not containing suy lmbedded crystals. It is of igneons origin. It varies much in colonr being flesh-tinted, brown, browniah-yellow, green, \&c. Formerly specimens of it were often designated, compact felspar. It constitutes the paste, matrix, or basia of the subjoined porphyry.
B. As adj. : Having clay-stone, \&c., as its basia.

Clay-stone porphyry:
Geol. : Aa jgneous rock consisting of clayatone with imbedded crystals.
cläy, v.t. [Clay, s.]

1. Ord. Lanc.: To cover or dress with clay. This maunuing lasts nfty years: then the ground munt be clayed \#galn."- Hortimer: Husbandry.
2. Sugar-making: To perform the operation of claying (q.v.).
clāy'-bănd, s. \& a. [Eug. olay, snd band.] A. As substantive:
afining: A stratum or band with clay in its composition. Used chiefly in the compound which follows.

## B. As adj.: Composed of euch s rock.

## clayband ironstone, s.

Mining: An earthy variety of Chalybite, constituting one of the most common ores of iron.
clāyed, pa. par. or a. [Clay, v.] 1. Otd. Lang.: Covered or dressed with clay.
2. Sugar-making: Purifled by meana of water percolating through a layer of clay spread over tha surface. [Clayino.]
 momewhat more concentrated in the treacle; and run
off into a copper cooler, capable of receiving tiree or

 the cone from which theg were cut. The clayed surgr
of Cuba is called Havanas sugar. . Clayed susar

tures, and Minea; Sugar.
olāy'on, oleien, * cleyene, a. [Mid. Eng. elei, cley = Eug. clay: sid. Eng. adj. ending en.] Composed of or built with clay. "These that dwellen [in] cleyene housia"-Wyycife
cläyes, s. [Fr. claie $=$ a hurdle.]
Fort.: Wattles made with atakes inter woven with osiers to cover lodgments; hurdjes to form blinds for working parties. When reinforced with earth they become gabiens. (Knight.)
cliny'-ăy, aley-i, * cley-ye, a. [Eng clay; $y$.

1. Consisting of or of the nature of clay "The kyns yetide hem in the oleyys erthe."- Wyellya
2. Bedsubed with clay. (Carlyle)

A. \& B. As pr. par. \& particip, adj.: (See the verb).
C. As substantive:
L. Ord. Lang. : The ect of covering or dressung land with clay.
II. Technically:
3. Sugar-making: An operstion by which sugar is purified.
"The claying now begins; which consista in apply of the oone a plaster of racillaceous eurth, or tolernbly tennclous lonu, lu a paety stata The water difiused and descending with 1 kke Hownosi through the bod of the sugar, carries along with it the residuary visci syrup, which lo morasola ahle than the granulated par ticles Whenever the first magnh of clay has become din its turphys a third wheroby the succr cone geti factures, and difines : orspan
4. Mining: The act of lining the blast-hole with clay to prevent the exploeive becoming damp.

## olaying-bar, :

Mining: A cylindrical bar for driving tene cious clay fate the crevices of a blast-hele to prevent percolation of water on the charge.

## claying-honse, e.

Sugar-making: A house for the operstion of claying.
"The cones remain 1 wenty days in the elaying
house before the sular in taken out of then house before the sugar in taken out of than."."- Vre
Dto of $A r t s, ~ M a n u f o c t u r e s, ~ a n d ~ M i n e t ~ S u g a r . ~$
clāy-ish. a. [Eng. clay; -ish.] Of the nature of clay; containing an admixture of clay.
"Amall beerprovesan unwholosomodrink; perhapa, by being hrewed with a thick, madish, and clayum
water. Which the brewere covet. - Harcicy: On Consumption.
olāy'-īte, s. [From the Hen. J. R. Clsy, U.S. Minister st Peru, and suff. -ite (Min.) (q.v.).]
Min.: A mineral from Peru, occurring crystalliaed and as a crust on quartz, e sulph arsenite of copper with oulphsutimonites of copper and lead. Lustre, metallic. Hardneas, 2.5. Melts befors the blowpipe.

* clayme, v. \& s. [Claim.]
clāy'-möre, * g1āy'-möre, s. [Gsel. claidheamh mor = a great sword, a broadsword Cf. Wel. cleddyf, cleddeu; Lat. $\cdot$ gladius $=\mathrm{a}$ eword.]

1. A Scattish broadsword; a two-handled oword used hy the Scotch Highlander
2. A basket-hilted broadsword. (Knight.)
3. By metonomy: A soldier armed with : broadsword. "His array was raptdy owolten to ness douhle tha
number of claymors that Dunde had companded. - Hacaulay: Hist. Eng., ch. xili
clāy-t $\overline{\mathbf{o}}$ 'nĭ-a, s. [Named after John Clayton, who collected plants in Virginia.]
Bot.: A genus of plauts, order Portulacscea (Purslanes). Claytonia perfoliata, a North American apecies, is anti-scorbutic. The tuber ous roots of C. tuberosa sre eaten in Siberia.
cläy'-wēed, s. [Named from the partislity of the plant to clay soils.]

Bot.: A composite plaut, Tussilago Farfara.

* cle, * clea, * clee, s. [Claw.]
clēaçh'-ǐng, $a$. [Etym. doubtful.] A term oceurriog only ia the snbjoined componnd.
cleaching-net, s. A hand net with hoop sad pole. (Knight.)
olead, cleed, s. [Clothe] Dress.
"That canty knap, tho In Ito brawest olead
olead'-ing, s. [ $\Delta$ Scotch pron. of clothing.] [Clothino.]
I. Ord. Lang. : Dress, clothing.
". . . what's in elther face or cleading.
of painted thhagy. cleading.
Aamsay: Poome is
II. Technically:

1. Mach.: The outer covering or jacket of the cylinder of s ateam-engine, or of the boiler
of a locomotive; a timber casing enclosing the boiler and firelox of a locomotive; the casing of hair-felt wrapped round steam-pipes to prevent the radiation of heat. It is called also logging.
2. Building, Eng., dc. : Any kind of pisnkcovering, such as the slating-boards of a roof, the boards of 8 floor, the plank-lining of a pitshaft, the planking of a copper-dam, \&c. (Ogilvie.)
3. Mining: The boarding which linea a shaft or tunuel.
clean, "clene, " clane, " cleane, a \& adv. [A.S. clàne, clene; Wel. glain, glan; Ir. \& Gsel. glan, ell = clear, bright; ${ }^{\text {G. }}$ H. Ger. chleini; M. H. Ger. kleine; Ger. klein $=$ small, fine, excellent.]
A. As adjective:

L Ordinary Language:

1. Literally:
(1) Free from dirt or eny filth.
" Heo weste her fet al clene" $\begin{gathered}\text { Rob, of Onoua, p. } 485 .\end{gathered}$
"They make elean the outeide of the cap and of the
platter. but within they are fult of extortion and ex.

II. Figuratively:
3. To free from guilt or moral pollution or stain.
" Babes hloody handee may not be clenes."

* 2. To sanctify, to free from taint of defilement. [Cleana a., 11. 2.]
"Ood dede Moyses thin bodoword on,

"... What God hath cleansad, that call not thou
rote, fät, färe, amidst, whãt, fâll, father; wë, wêt, hëre, camel, hẽr, thêre; pïne, pît, sïre, sür, marine; gä, pơt

3. To free from any contagious or loath some diseass.
"Olesse ya meselis."-hyelfo: Matt. x. 2
4. To purge or clear the body of noxdous hunours.
"And, with rome wroot oblivions antideto,
cleante the otuff 'd bosom of that perilous atnff"

* 6. To acquit.
*R. To do away guilt, to stons for, to purge.

Not all her od'rous tears can cleanse her crime,
Hor piant alone doforms the liappy oliue.
alannged, pa. par. or a. [Cleanse.]
cl夭̆an'-ఫêrr, \& [Eng. cleans(e); -er.]

1. Ord. Lang.: Ons who or that which cleanses.

2. Med. : $\Delta$ medicine which has the power of purging any foul or noxious humours; s pargative.
"If thera happaus an imponthume, houes, and even hoaey of roe
 pr. par., a., \& s. [Cláanse]
A. \& B. As pr. par. a particip. adj.: (In senses corresponding to thoae of the verb).
C. As substantive:
I. Ordinary Language:
3. Lit. : The ect of freeing from dirt or any offenaive or extrsneous mattar.
4. Figuratively:
(1) The act of freeing from any contagious or loathaome disease.
(2) The state of being freed from any contagious or losthsome disease.
"Thin shali be the law of the leper in the day of his
(3) The act or process of freeing from moral pollution or stain.

* (4) The act of acquitting of a chargs ; an acquittal.
1I. Cowkeeping: The coming off of the eecuadiaes of a cow.

## cleansing-vat, 3.

Brewing: A vessel tn which the fermentation of beer is concluded, the yeast running ont of the bung-hole, and being kept full by supply frotr a atone-vat. (Knight.)
olëar, "cleer, "clere, cler * clier, clyre, a, adv., \& s. [O. Fr. clair, cleir, cler, from Lat. clarus = bright, clear.]
A. As adjective:
I. Literally:

1. Bright, luminous, free from opaqueness or cloudiness.

- On which the winged boy in colours cleare

Depeidoted was, . . spenser: F. Q., IIL. xi. 7.
(1) Of the weather: Serene, unclouded, bright.
"The day was clere, the moune hote".

(2) Of sound: Distinct, plain; easily and distinctly audible.
"Hark! the oumbers boft and clear
Oevtly ateal upon the ear.
Pope: Ode on Sc. Cecilia's Day.
2. Pure, unmixed, free from impurities, peliucid.
"Olere as watur or other lieour."-PPrompt. Part.
I Sometimes with the prep. of.
"The atr is clearer of gross and damp exhalations." TiL Figuratively:

1. Bright, handsome.
"Al hire clers colour comsed tor to fede." $\begin{gathered}\text { William or Palerne, } 579 .\end{gathered}$
2. Cheerful, serase; nuclouded with passton or care.

-3. Showy, pretty, fine.
"Himes that ta clothed with eteer clothing."-Wyolifo:
3. Manlfest, apparent, oot dark or hidden.
 . Burnet: Theory of the Eatrh
4. Evident, indisputable, plain, undeniabls.
"Remadned. - to our almighty foo

5. Distinct, perspicnons, free from uncer taluty or indistinctnass, easily apprehended. "We protond to give alear nocount how thunder
6. Proinpt to understand, sharp-witted, acute.
-Prompt, Partt and vadyratondyaga. Perapicax:"
7. Far-seeing, scate.
8. Free from guilt or bisioe, inoocent, guiltless, free from responsibllity.
"Sanue me and mak cler for mil toule destourbed is,"
I Sometimea with the prep. from.
"I am clear from the blood of thle woman." $\rightarrow$
9. Free from distress, oppresston, or any bnrden.
"The cruel oorp'ral whisper'd in my ear. me cloary."
10. Free from defact or blemish.
11. Free from deduction, abatemsnt, or encumbrance; net, in full.
"I otten wish'd that I had eloar,
12. Free, open; without impedimsut or obatacle, nuimpeded.
of puiting down a mitary oxploft mora sorious than that of puitivg down arlot or of keeping astreot clear for a
13. Open, free, with no object intervaning or impeding: as, to have alx tnches clear between two things. [Clear, 8. Clearance.]
14. Frea from debt.
15. Datermined, reaolute. (Scotch.)
16. Safe, or sway from, free.
on the lisatant they got cearr of our ship."-

* 18. Unpreposseseed, impartial.
"Luucippe of whom one look, lo a ciear judgment,
world hare boen more acceptalle than all her kind. nees so prodigaluy bestowed. - Sidmey.
* 19. Complete, total.
* 20. Undetected.
"Acloar thett paesed for a vertne."-Gentloman In-
*B. As adverb:
L. Literally:
*1. Brighty, clearly.
"In the suoe that schlines ctere."-Oaroor Mundi, 29L 2. Audibly, clearly.
"He cried high and eleer."-Merim, I. 4. 20L
II. Figuratively :

1. Clearly, plajuiy.

What of my steadlest "Now thoughts I buve searche

2. Completely, quite.
" He put his mouth to her ear, and, under pretext of
a whisper, bit to clear ofr."-L Eartrange.
a whisper, bit it clear off:"-L Eatrange.
C. As suastantive:

1. Light, clearness.
2. Clarified liquor.
3. Carp. \&c.: Clear space between two bodies. (Oaly io the phrase, in the clear.)
TC Crahb thus distinguishes between clear, lucid, bright, and vivid: "These epithets mark a gradation in their sense; the idea of light is common to them, but cear expresses lesa than lucid, lucil than bright, and bright than vivid. A mere freedom from stain or dulness constitutes clearness, the return of light and consequent removal of darkuess constitutes lucidity; lrightness supposes a certain strensth of light; vividness a freshness combined with the strength, and even a degree of brilliancy. . These epithets msy with equsp propriety he apphed ta colour as well as onght: \& ciear colour is nnmixed with any other; a bright colour has something striking and strong in it; a vivid colour ammething plication thes preserve a similar distinction application they preserve a similar distinction : a conscience is said to be clear when it is free from every spot or stain; a deranged nnderstanding may have lucid intervals; a bright tatellect throws lightit on everything around it; a vivid imagination glows with every image that nature presents." (Crobb: Eng. Symon.)

"Clerenesse of wedyr. Seronitas"-Prompr. Pars.
*. Glory, honour.
"1 take not clemeass of men."-Wyelfa : John 7.41
7. Besnty, handsomeness.
"In the chernes of his concubines and curtous wedex"
If Cralb thus distinguishes between clearness and perspicuity: "Clearness respects our Idess, sud springs from the distinction of the things themselves thst are discussed; perspicuity respects the mode of expressing the ideas, aud springs from the good qualities of style. perspicuity is sn scquired art ; slthongh intimately connected with each other, yet it is possible to have clearness withont perspicuity, and perspicuity withont clearness." (Crabb: Eng. Synon.)
clëar-stör-íal, elëre-stör-1-al, $a$ [Eng. clearstory, sind suff. -al.] Of, or pertaining to, or of the nature of, s clear-story.
clear'-wēed, s. [Eng. elear, snd weel.] An American name for Pilea pumila, an urticaceous plat.
cleat, a. [From Provinc. Eng. cleat $=$ a piece of iron worn on the shoes by country people $(\mathrm{Mahn})$, [Clamp.] Cf. also Dut. $k$ loet $=\mathrm{a}$ boat-hook, a pole ; A.S. clate $=\mathrm{a}$ bur, a clothbur; Dut. ktis snd Ger. klette $=\mathrm{s}$ bur.]
8. Carp.: A strip oi wood secured to another one to strengthen it, as a batten placed trinsversely on the back of several boards which are jolated or matched together.
9. Naut.: A belaying-piece consisting of a bar with two arms fastened to 3 post or atanchion by a bolt passing through ita stam.
clèat, vit. [Cleat, 8.] To fasten or atrengthen wha cleat.
aleav'-a-ble, a [Eng. cleav(e); able.] Caprible of heing cleft or divided.
"In the one case it is the ralaleculen arranging themelefrabila atructure ....-Tyndall: Frag. \&o Befence (3xd ed h xiv. 408
cleav-age, \& [Eng. cleave, snd auff. -age.] 1 Biol: : Segmentation of the vitelius; often called egg- or yolk-cleavage.

## 2. Crystallography:

(I) The set of cleaving or splitting a crystal 10 a certatn direction in which it is easy to do of easy flssure of being so cloft. This line of easy fissurs, as a rule, is parallei to one or more of the faces of the crystal. Cleavage tonds to reduce a mineral to the form of its primary or primitive crystal.

## (2) The line along which' such aplitting takes

 place.In hnilding np cryitale thee littlo stomie brioke often arranto themuelve into liyer which aro per-
 3. Geology
(1) The act or capebility of cleaving certain laty rocks into an indefinito nmmber of thin laminæ, parallel to each other but not parallel to the pisnes of etratification (Iyell); the etate of being so cleft.
(2) The cleft or flasure which is thue proanced. Clearage is divided into laminar fissino, or Flaggy Cleavage, colncident with beddiog planes, snd Slsty Cleavage, deviating from the direction of the bedding planes. Slaty Clesvage is a fissile structure in certsin slaty or other rocks distinct from both stratification sod jnints, though in some cases fication sod jnints, though in some cases lisbie to be mistaken tor one or other of
these. it most frequently occurs in clsyslste, or other srgillaceous rock, next in frequency to which it is found in gneiss, micsschist, hypogene-limestone, \&c. Murchison, in his "Siluria," shows that slaty cleavage exista in the Silurian and other older rocks, snd in those of Devonian sge. It is not uncommon in the carboniferoas rocks of Irelsnd, but less so in that formation generally. Slaty cleavage, orslaty texture, has been snperioduced by the rock having been subjected to great pressure, which also affects siny tossils which the rock may contain, squeezing and distorting them to s considerable extent. Flaggy cleavage has been prodnced by the regular deposition of thin layers of sediment one upon another. Slaty clesvage is seldom met with in racks of eruptive origin, except in beds of volcanic ash, and occasionslly in some of the older lavas. A structure, called Foliation, resembling laminsr fission, is found in altered sedimentary rocks. It is due to the segregation of any one mineral component of the rock along a more or less regular plane, and thus differentiating the rock into a series of alternating layers of different composition.

## cleavage-cavity, $s$

Biol.: The cavity of a blastosphere (q.v.).

## cleavage-cell, s.

Biol.: A blastomere (q.v.). Called aleo a cleavage-globule.
cleavage-glebule, s. [Cleavaoz-cell.]

## cleavage-mass,

Biol. : Any cell of a morula (q.v.).
cleavage planes, s. $p$.
Crystallog.: Planes slong which a mioeral msy be most easily cleft.

"What wilt he clem me and my followers? Ast
2. To stop a hole hv compressing it, or by means of lime, clay, dc. (Scotch.)
B. Intrans. : To starve, to perish from hunger.
"Hard is the choice when the valiant must mt their arms or
clē-măt'-ĕ-w, s. pl. [Lat. clematis (q.v.), and femı. pl. adj. anff. -ecr.]
Bot.: A tribe of Ranunculacer, consisting of species with a valvate or induplicate calys. Type, Clematis.
clĕm'-a-tǐs, a. [Lat. clematis; Gr. кдпиaris (klēmatis) $=$ (i) brush-wood, faggot-wood, (2) variona plants with long, lithe branches, spec. the clematia (seo def.), and tha leriwinkle. Dimin. from $\kappa \lambda \hat{\eta} \mu a(k l e m a)=(1){ }^{2}$ short twig broken off, a slip, a cutting, (i) a vine twig, which the clematia resemhles io its trailing babit ; $\times \lambda \alpha \dot{\omega} \omega(k l a \bar{o})=$ to break.]
Bot. : Traveller's Joy, or Virgin's Bower, a genus of plants, oder Ranunculaces, tribe Clematex. Sepals, 4-6; 1etsls, none; stamens $^{\text {n }}$ and atyles many; achence termioated by a long, generally feathery swo. The apecies are numerona. Clematis Vitalba, the Conmot
[^136]Traveller'a Joy or Virgin's Bower, is a elimbmg plant with pinnate leaftets, twining petiales and greenieh-white flowers. It occur wild in the middle and aonth of England. $C$ Gourrana and C. Wightiana are not uncommon in India, on the Western Ghsnts, in the Decran, cte., and there are other Indian specias. On the continent of Europe, $C$, arerta and $C$. Rummula are nsed by leggars to producs artlflial ulcera on their litabs, whilst in America according to Geyer, the root of a clematis is employed by the North American Indians as a otimulant to horses which fall down st thair races. The acraped end of the root is held to the nostrils of the fallen animal which begin o tremble sad then rising is condncted to o treinble, and then rising is condncted to water to refresh itself. Various apeciea of
clematis are found in Englah gardens and clematis are

## clomatis-camphor, s.

Chem. When the young branches of Clemar tis fammula, de., ara distilled with water, an acid pungent liquid is obtained, which an acid pungent liquid is obtained, which
reddena the skin; when kept in closed vessels reddena the skin ; when kept in closed vessels
it deposits white acalea and flocks of clematisit deposits
clĕm-eq-ti'-tinn, s. [Mod. Lat, clemattt(is), snd Eng., dc., auff. -in.]
Chem. $\mathrm{C}_{9} \mathrm{H}_{10} \mathrm{O}_{6}$. A hitter sabstance obtained from the root of Aristolochia Clematitis.
olém-a-ti'-tǐs, s, [Lat. clematis (q.v.), snd suff. -itis.] A plant, Aristolochia Clematitis.

* clembe, v.t. \&i [Clims]
- cleme (1), v.t. \& i. [Claim.]
* cleme (2), v.t. [Clay.]

1. To dsub over, to besmear, to cover with any aticky aubstance.
"Oleme hit with clay comly withinne"-Early 2. To apread, to besmear.
"creme upon, the wounde oxe doange abonta."-
बlčm'-ẹn-çy, * clĕm-ençe, a. [Fr. clemence; Sp. clemencia; 1tal. clemenza, from Lat. clementia = mildness, geotleoess; clemens = mild, gentle.]
2. Of persons:
(1) Mildness of temper and dispoaition; gentleness, kindness, compasaion, hninsoity.
or of as wastiment the clemency of an ostentatious man, - Macaulay: Eizi. Eng., och. xv.
(2) Mercy, \& willingoess to forgive, a pardon. "It wrid even suspected that he seut some persona

\$2. Of the elements: Mildneas, softness.
"Then in the clemency of upward alr."
F Crabh thua distinguishes between clemency, lenity, and mercy: "Clemency and lenity are employed only towarda offenders; mercy towarda sli who are in trouble, whether from their own fault or sny other canae. Clemency liea in the disposition; lenity and mercy in the act; the former as respects auperiors in general, the latter in regard to those who are inveated with civil power : a monarch displays hia clemency by ahowing mercy; a master lenily by not inflicting punishment where it is deserving. Clemency is arbitrary on the part of the dispenser, flowing from his will independent of the object on whom it is bestowed; lenity aud mercy are diacretionary, they slways have regard to the object and the nature of have regard to the object sad the nature of
the offence, or miafortunes; lenity therefore the offence, or miafortunes; lenity therefore
often aerves the purposes of discipline, and ofter aerves the purposes of discipline, and
mercy those of justice by forgiveneas, inatead of punishment : lut clemency [sometimes] defeats its end by forbearing to punish where it is needful." (Crabb: Eng. Synon.)
clĕm'-ent, a. [Lat. clemens $=$ mild, gentle.] 1. Of persons: Mild, gentle, forgiving, compassionate.

## †2. Of the elements: Mild, aoft.

Clom'en-tīne, $a$. s. [From the proper name clement, which is derived from Lat clemens (genit. clementis) $=$ mild, calm, soft, gentle. See def.]
A. As adj.: Pertaining to Clement of Rome (Clemena Romanus). one of the five apostolic tathers; to Clement of Alexandria (Clemens Alexsndrinns); to one of the fourteen Clements who filled the Popedom; or to sny other pereon of the same name.

## B. Aa substantive:

## L. Bibliography:

1. Pl. (The Clementines): Certain Christian compositions long attributed to the spostolic father, Clement of Rome, hut now held to have been composed after his death, probably by one of the Ebionite sect.
2. A collection or decretals and constitutions of Pope Clement V., publiahed in A.D. 1308. They were regarded as the aeventh book of Decretals (q.v.). (See silso Canon Law.)
II. Ch. Hist.: The followere of Clament VII. who was held by most of the French, the Scotch, \&c., to have been legitimately elected to succeed Pope Gregory XI., whilst the Italians, the Eoglish, \&c., deemod him si antipope, and held that the hols father legit] mately elected waa Urben VI. Thia achism began in A.D. 1378, and anded in 1409. The scandal which it caused weakened the prestige of the Papacy, and helped the church a certain distance fol Nard towards the Reform ation. [SCnisM.]

* clëm'-ent-1y̆, ado. [Yng clement; -iv.] In a clement or forgiving manner, kindly, mildly.

aiastical writers for clergy．In tha passage in aiastical writers Por clergy．In tha passage in
St．Peter it olviously meana the whole borly of St．Peter it olviousiy meana the whole bory of
believers in any particular congregation，or in believers in any particuiar congregation，or in tha church collectively viewed as＂Gods her ＂God＂in the Authorised Veraion was，as its being apelled in italics shows，inserted by King Jamea＇a translators；it is not in the original．In the second passage，Acts 1．15－26， the word $\kappa \lambda$ ypos（kieros．s）is used of the a postolate from which Judas fell，and to which Matthias was elected（verses 17,25 ），and the pioril a ñpos（Kereroi），of the lots cast to decide hia election（v．2b）．
（2）The verse in St．Peter［No．（1）］doubt less alludes to a multitude of Old Testsment passages in which the Israelites are descrihed as the inheritanes or heritage of God（Deut． xxxii．9，Psams xxviii．9，Ixxviii．71，Jer．X． 16 Joel ii． $17, \& c$, de．）；as alao is the country of Canasn（I Sam．xxvi．19， 2 Sam．xxi．3，Psalm Ixviil．9，\＆c．\＆c．）．The word in these and varions other passages ia kinpovopia（kièm nomota），a derivative of к $\lambda \hat{\eta} \rho o s(k \bar{e} r o s)$ ．Its primary ctymological meaning is lot（sce etym．） and it is used with tacit reference to the dis tribution to the several tribes of theirrespective posseasions by lots（Num．xxvi．52－56，Joshua xiv．1－3，xY．1，xvi．1，\＆c．，\＆c．）．When the distribution took place，the Levites received distribution took place，the Levites received no territory as a heritage，God being their in－
heritance（Num，xvill 20 ，Deut．x． 9 ，xvili． heritance（Num，xvill 20 ，Deut．$x .9$ xvili．
1,2 ），as was alao the prieathood of aome of 1，2），as was alao the priesthood of aome of
them（Joshua xvili．7）；the ascrifices of Jehovah made by fire（Joahna xiil．14），and tithes（Num．xviit．21－24，Deut．xiv．23，29）． Reciprocally God claimad them as his special servants，taking them in lien of the frst－born davoted to him when tha Egyntian first－born wers sialn（Exad xifi．11，12，13，15，Nam．Jii． 12，45，vil． $11-24$ ）．Fe said of them＂Ths Levites shali be mine．＂An analogy being drawn between the apecial position of tha Levites snd that of the Christian miniatry as
 kגinpon（hlaron），used originally by GL Petei of epiritual chiefs
2．CAurch History：
（1）In the Early Church ；St Paul sccented ecarcely anything from those to whum ho ministered（Acts Xx．83，34，and 2 Cor．xi．1）． bls general practice being to oupport himself by tent－making（Acts xvili．3），bat he let it be anderstood that as s ruie those who ureached the gospel ehould live of the gospel（ Cor．is． 19，14）．This support enabled the jastors of the several churches at a yerre early perind of Christianity to withdraw from eecular occupa－ tlona aud give their whole tima to their sacred calling
（2）In medlawal fimes：Century by century slmost to the time of the Reformation，or at least till about 1800 A．D．，the power and innlu． ence of the clergy went on to jucrease．As every instance of notorious vice on the part of one discharging sacred fuuctions weskena the order to which he belongs，whilat every case of conspicuons virtue increases it，the clergy never could have obtained the influence which they did unless at least a vast aection of their nomber had been really opiritual men．They had other sdvantages of no mean kind．The only edncated clasa［Benefit of Cleroy］ membera of an intermational sociaty exjating wherever Christianity had rooted ltself；the cole adminiatrators of the sscraments，and in confraternity with a chlef believed to have th keys of the kingdom of heaven，the elergy had every opportunity of rising to transceudent power over the imagination，the cousciences， and ultimately the earthly poasessions of men Avaining themselves of these advantages the sctually rose to a pitch of suthority which perhaps no other priesthood except that of the Indian Brahmana ever rivalled．Their ruie was for a time an adventsge to Europe．It was knowledge ruling over ignorsnce，at leset partisl refinement holding in control lawlese partisics；a ladder by which the humblest could cilmb to grest heights of society，whilst out－ cilmb to grest heights of cociety，whilst out－
side the church genius of humble birth was side the church genius of humble birth was
prevented from rising，being held down by the prevented from rising，being held down by the
weight of fendsl chains．But not even a acered weight of fendsl chains．But not even a aacred order of men are to at length the pretenaiona of the clergy converted most civil governinents nto their thiniy disguised foes．［Guelphs， abibellines，de］Means were taken to bridge their power，each new achems being as Blackstone ohowa，ingeniousiy evaded，atid flaally their tyranny and rapacity，rather than their doctrinal viewa，excited a great part of Europe against them，and brought on the grest revolt against their domination known as the Refonnation．During the medizval period the molastic orders were looked upen sa bo ouging to the clergy．Abbots，priors，monks， te．，were known as tha regular clergy，snd bishops，deana，priests，\＆c．，as the seculas clergy．
（3）Post－reformation times：Ths civil govern－ ments on one hand，and the isy melubers of the aeveral chnrebes on the other，gained back from the clergy，in conntries where the Reformation was auccessful，a grest part of what they had lost during times of greater ignorancs．Fot detaila bee Reformation，Royal supremacy \＆e．

clī-Zn'-thŭs, s. [From Gr. «入éos (kleos) = glory, and andor (anthos) $=$ a blossom, so nained on account of their glorious appearance.]
Bot.: A genus of Pepilionaceous plants, anb-tribe Galegea. They are very elegant plants, growing in Auatralia, New Zealand, the Philippine Ielianda, \&c. The flowers are crimson, ecarlot, fleeh-coloured, \&c. Cultivated here in the borders of coneervatories or againet southern walle, they ettain the beight of eight or ten feet, but one fine species, Clanthus puniceus, the Parrot'e Bill, a native of New Zealad, is said there to become a large tree.
clỉb'-bẽr, clŭb'-bẽr, s. [Etym. donbtful. Jamiesen enggesta a connection with cliff, ceave.] A wooden saddle, a pack-saddie.
"They carry their victual in straw creele called

clí'-qhê, *. [Fr. cliche, from clicher=to atereotype, cogn. with O. Fr. cliquer $=$ to clap.]

## 1. Stereotyping:

(1) A matrix, the impreseion or cast formed by plunging é die into metal in a atste of fusion. (Webster.)
(2) A mode of obtaining an impression from die or high relief, or from a forme of type by striking the cold die with a audden blow apon a body of metal which la just becoming tolld. (Knight.)
(3) A copy, tsken in copper, by the eiectrotype procese, of a woodcut or forme of type. Electrotypr.]
2. Photog.: A negetive picture.
cliche-osisting, s. The set or process forming a matrix
cliph'-y, s. \& $a$. [See def.]
A. As substantive:

Geog. : Clichy, more fully Clichy-la-Garonne, a commune and village of Fravce, four and a half mileo N.W. of Paris.
B. As adj.: Made at Clichy, or in any way pertaining to tt .
Clichy-white, s. A pure white-lead mannfactured at Clichy.
click, v.i. at $t$. [An imitstive word formed from clack (Skeat); Dut. kliken; Fr. cliquer.]
A. Intrans: To make or cause ellight sharp noise, to tick.
"The soleun death-watch click'd the hour ohe died;
B. Transitive:

1. To anap, to make a noise by striking together gentiy.

Jove
marbile thumbe
Ben Jonton: Seja
Ben Jonan. sojanus. il. 2
2. To cause to make a slight eharp cound.
"When merry milkmaids click the latch."
*3. To anatch.
"He.. the chalics from the altar clicke."-Ward:
ilfok, s. \& a. [Click, v.]
A. As substantive:
L. Ord. Lang. : A slight sharp sound, a tick. "The click of [billard] balls."-c. Bronte: Jane IIre,
II. Technically:

1. Philol.: A kind of articulation used by the natives of Southern Africa, consisting in the sudden withdrawal of the end or some other portion of the tongue from the part of the month with which it is in contsct, whereby a sharp clicking sound is produced. They are four in number, and are called cerebral, palatal dental, and lateral clicks, the latter being the noise ordinarily used in urging a horse forward. (Webster.)
2. Machinery:
(1) The detent of a ratchet-wheel falling into the alacea between the coge as the wheel revolves in one direction, and preventing any backward movement. In larger machines, such as the capstan, it is called a pawl.
(2) A catch for e lock or bolt, a latch.
3. Wresting: A peculiar movement by which one of the wreetlers sharply knocks his edversary's foot off the groand.
B. As adjective: (See the compounds).

## click-beetle, 8.

Entom. : Any beetle belonging to the family Elateride. The hinder portion of the preaternum terminates in a point, which the insect can at will fit into a cavity of the breast with the effect of enebling it, if lying on the back, to lesp ap with e elightly click. ing sound. It is from the latter peculiarity that the name click-beetles is derived.
click-clack, s. Uninterrupted loquacity. (Scotch.) (Jamieson.)
click-pulley, s. A pulley with a spring click acting as a detent to restrain the oheave from running back.
click-wheel, s. $A$ ratehet-wheel, one whose cogs ars radial on one face and inclined on the other, so as to give e equare face to the end of the click, pawi, ratchet, or detent, de eigned to prevent the back movement of the wheel. (Knight.)

## click'-ör, s [Eng. clide; -er.]

${ }^{*}$ 1. Ord. Lang. : A tout; one who atood at the door to invits passers by to enter a ahop. 2. Boot-making: One who cuts out the lesther in the proper sizes and shapes for the varieus parts of the boot for which they are intended.
3. Printing: A compositor at the head of a companionehip, who has charge of a work or worka while being put in type. A part of his duty is to distribute the copy amonggt the other compoaitors.
 * olyk-ott, s. [0. Fr. cliquet, from cliquer $=$ to clap.]
I. Literally

* 1. The knocker of a door; anything used to knock with at a door.
"He amytethe on the gardyn gate with e elykot of p. 210 .
* 2. A key of a door.
"Clykett. Clitorium, clanteula."-Prompt. Pare.
"A ciyket bit cieght cios hym hyhynde"",
*3. The trigger of an engine.

- 4. A rattle, a clap-dieh (q.v.).

5. The latch of a door.

* II. Fig. : The tengue. (Cotgrave.)
* olfck-et, * clik-et, v.f. [Clicket, 8.] To latch, lock, or bolt a door.

The dore clowed, keyed and elikettod.
Langland: P. Plownan, 8, is

A. As pr. par. : (See the verb).

B, As adj.: Causing or emitting a small oharp sound; ticking.
$\because$. I distinctly beard a clicking noise, similiar to that produced by a toothed wheel passing under a (ed. 1870), ch HL. p. 84
C. As substantive:
I. Ordinary Language:

1. The act of causing or emitting a amall sharp sound or tick.

## 2. A tick, a small sharp sound, a click. While conversation, an exhausted atock," Orows drowy as the cticking of a clock."

II. Technically:

1. Bootmaking: The art or process of cutting out leather in suitable shapes and aizes, for the various parts of the boot.
2. Printing: A term applied to the mode of getting out work by the formation of a compariveship, or selected number of men, who pare appointed to go on with a certain work or works. (Ruse o Straber: Printing and its Accessories.)
clī-děm'-í-a, s. [Named after Klidemi, an ancient Greek botaliist.]
Bot. : A genus of plants, order Melastomacex. Their native country is tropical America. Several are cultivated in English greenhouses. The fruit may he eaten.
cli'-en-č̆y, s. [Eng. clien(t); cy.] Tbe cli'enn-çy̆ ${ }^{\text {s. }}$ [Eng clien $($ )

* clift'-y̆, a. [Eng. clift; - $y$.] "The rocks below widen considerably, and their
clifty sides Are fringed with weed. - Penant. cli'- dee s. nt. [From Lat., \&e., Clio (q.v.), and fem. पll. gdj. saff. -ide.]
Zool. : A small family of pteropodous molluses, section Gymosomata. There is no
ghell. The animals have beal with tentacles, a small distinet font, and an opistho-branchiate heart. Type Clio (q.v.). [Clioniae.]
- clik-et, s. [Clicket.]
 (1) the round of a ladder, (2) a climacteric (q.v.).] The same as Climacterio (q.v.).
"Fhder tines, weteling their disputes upon climacters,
"clī-măc-tẽr, v.t. [Climacter, 8.] To brimg to the elimacteric.
- Death might have taken such, her end deler'd.
Until the time she had been climacter'll
 cli-mac-ber'-i-an,s. [Eag. climacter;-ian.] One fond of a climax.
"Wo uhall find him on many oconslons e great cli-
clī-mǎ-tẽr-Ǐc, " cli-măc'-ter-ick, a. \& s. [Eng., \&c., climacter ; -ic.]
A. As adj. : Critical, dangerous; pertaining to the great clinacteric [B.], or to any ons of lesser peril.
B. As subst.: One of certain periods of a man's life in which his constitution is snid to unilergo great changes, involving him in danger til they are over. They are multiples of 7 or of 9 , as $35,49,81$. The nost perilous of these, called by way of cminence the grand climac-
teric. is his 63 rd year-for $9 \times 7=63$. The teric. is his 6ird year-for $9 \times 7=63$. The
the year of life is also dangerous. The grand climacterte of lifs is said to have been recogclimacterte of lifs is 8
nised by Hippocrates.

## Climacteric disease:

Med.: A diseasa affecting, both men and Women, bat more obvious in the corner. It may le looked for about the 63rd year of age, but varies in the time of its coming according to the constitution of the individual, the limite being in the one direction 50 and in the other 75. Its most common predisposing cause is mental anxiety or auffering, The expresaion of the countenance altere for the worse, the pulse becomes accelerated, the flesh wastes awas without obvious cause ; there are sleepless nighta, and wandering pains fit through the head and chest, and aleep is either deflcient or brings little relreshment. After a time recovery as a rule tokes place, but the countenance never recovers its former espect, or the constitution its vigour.
clï-măc-těr-1-cal, a. [Eng. climacteric; -al.] The aams as climacteric (q.v.).
"One of these, an eiderly man, who contensed to

 The working up to a climax.

+ clī'ma-tal, a. [Eng. climat(e); -al.] Pertaming to or dependent on climatic changes.
 piss.
* clī-ma-tăr'-chřc, a. [Gr. к $\lambda^{\prime} \mu a$ ( $k l i m a$ ), (genit $\kappa \lambda$ iцатоs (kimatos) $=$ a climate $;$ äpX $\omega$ (nrchô) = to rale, to govern.] Presiding over or regulatiug the cinatea
cli'mate, * oll-mat, cly-mat, * clymate, s. [Gr. кגiцa (klima); кגıvo (kinô) = to canse to bend or slant. (1) The inclination or slope of ground ; (2) a slope imagined by the ancients of the ginbe from the equator to the pole; (3) a zome or a parallel of latitude, the space between theae parallela of latitude beld to be synouymous with a climste.]

## I. Ordinary Language:

*1. In the Greek sense:
two cimates, partion of the earth contained between ce worta of woras.
2. In a sense intermediate between the Greek one and that presently in use: A comotry, a
region.
"The climate of Gaul [Galligrump plagam] is eaclosed
onevery side with fences that ens iron it naturally:-
Hollant Reminiaconces, p. 4 .
3. Characteristic condition of a country or district with regard to weather; meteorological conditions viewed as a whole. (II.)
II. Meteorology:
(1) Present climate of the several parts of the uorld: The most potent cansea regulating climate are latituda on the ong hand, and alevation above the sea level nion the nther, the former cause producing perpetual snow and ica sround the North and South Poles, and the latter acting with similar effect on the aummits of such monntain chains as the Himzlayas or the Aules. Were these the aole canses, lines of equal temperature ${ }_{5}$ or, as they sre technically called, Isothermal lincs, would coincide with circles of latitude; instead of doing this however, they are jarallel neither to the equa-
tor nor to each other.
[Isotranmal.] In tor nor to each other. [Isotrermal.] In
gidition to the two above-mentioned causes, mullition to the two abnve-mentioned callses, tion of the several continents snd islands, the posithon and depth of the acas, sad the direction of curreuts and winds. Our own country is often tacitly assumed to be the normal climate hy which all others are to lee tested; in reality, being an island, whilst mest of the land existing in the world is distributed in continents, its climate is one of an exceptional character. It is of the typue called insular, that in, such 85 exists in su island in which the sea diminishes the difference in temperature between summer and winter and between night and day. The normal type of climate, that existing on contineats, is called excessive; in it a great differnce exists hetween the temperature of shmmer sud that oi winter, as well as between that of the night and thst ne the day. Asia sul North America are the best existing examples of excessiva climstes. In Britain an east wind, blowin; in winter over the frozen steppes of Russia, is cold and dry ; s south wind in summer coming
over the continent of Europe, if not even re. motely from the Sahara, it hot and dry, whilst a south-west wind, bringing heat, molsture. "depressions" innumerable, and in some casee even epent cycionea from the warm eurtace of the Atlantic, ia the parent of heat, rain, and atorm.
(2) Part climate of the several countries of the world: There ia distinct geological evidence that the climate of the world has oacillated in time past, being, in Enrope and North America et least, higher at one time and at another lower than now. During the carhoniferous period the vegetation and the animal life too were eo uniforn from the Aretic zone to the equstor, that the temperature must have varied little in different latitndey, and little alao between sumnser and winter. The temperature of the Permisn is doobtiul; during a portion of it there may have been a glacial period. The atony corala of the oolite nsturally suggest a tropical or all but tropical climate. The tenperature of the eocene was bigh. It alowly rell, however, during tha miocene and the older pliocene, till in the upper pliocene it was for a time absolutely glacial. Sinca that comparatively recout geological event, it has risen to what we hava it anw. Sir Charles Lyell considered that bygona changes were probally produced by different distrihutions of isnd and water over the globe, a glacial period coming when a great deal of land, and that high land, was round tha poles, and ne of great beat when most of the land was round the equator. Mr. Croll, on the contrary, following in a direc tina in which Sir John Herschell led the way believes that minute alterations on the ellipticity of the earth's orbit will produce oscillation of temperature in one directinn for 10,500 years and then in the other for the same lengtheaed period of time. [Glacial perion.]

"A sort of coarse woollen cloth called elor, or enddoess, the manufacture of their wives, made noto shor $\rightarrow$ Stak dec. xNi 164 ,
clō-à-ca. (pl. clö-ā-ça), s. [Lat.]
* I. Ordinary Language :
I. A sewer, an underground drain or conduit.
- The Roman Cloaca Maxima (the greateat or main aewer) is said to have been constructed, or at least commenced, under the auspices of king Tarquinius Priseus, about B.c. 588. It is atili used in the drainaga of Rome. 2. A privy, a house of offlce.
II. Technically:

1. Anat.: A part of the intestine in which the intestinal, ovarian, and urinary outlets terminate. This structure exists in birds, io reptiles, in the amphibia, and in ha maminallan arder Mountremata. In the rotifera alao the perivisceral cavity terminates in a dilatation or cloaca, which forms the common outlet for the digestive, generativa, and water- vascular aystema. Thera is a cloaea also in insects, and nue also in the ancial ascidians. The latter is the conmen eavity iato which the atrial chambera open.
In the emhryonic development of man there is a pertod during which a cloaca, like that of the inferior aninals, exists.
2. Pathol. : The opening, in cases of mortifleation, leading to the enclosed dead bone.
clō-a'-cal, a. [Lat. cloacalis = pertaiojag tn a cloaca.] Periaining to or of the nature of a cloaca.
"The axcreta are volded through a doacal pakange.
lōak, toloke, s. [O. Fr. clogue, cloke, clocke, from Lnw Lat. cloca = (1) a bell, (2) a horseman's cloak.]
3. Lit.: A lonse wide outer garment worn over the other clothes ; a mantle
" Then give him, for a soldier meet,
Soott: Rokeby, v1. 39
4. Fig.: A disgulse, a blind, a cover; anything used as a means of concealing one's thoughts or plans.
ness. Nut using your Hberty for a cloak of malleions-
If Crabb, after ahowing that cloak, mask olind, and veil, when used figurstively, are all employed in a bad sense, thus diacriminates betwees them: "The cloak, as the external garment, is the most convenient of all coverings for entirely keeping concealed what we do not wish to be seen; good outward deportment serves as a cloak to conceal a bad character. A mesk only hides the face; a mast therefore serves to conceal only as much as words and looks can effect A blind is jatended to shut out the light and prevent observation; whatever, therefore, conceals the real truth, aod prevents auspicion hy a blas exterior, ia a blind. A veil prevents a person from seeing as well as heing seen; whatever, therefore, obscures the mental aight acts as a veil to the mind's eye." (Crabb: Eng. Synon.)
cloak-anemone, s.
Zool.: Adamsia palliata, commensal with crabs.

* cloak-bag, s. A bag in which cloaks and other clothes were earried; a portman. tean, a travelliag-bag.

## cloak-pins, s. pl.

1. Large pins used to fasten a cloak.

cloch-er (oh gitteral) $v i$ wheezing in the throat] To Grel. clochar = A wheezing in the throat.] To congh violentiy.
(Scotch.) (Scotch.)
cloçh'-ẽr, "clok-erre, s. [O.Fr. clochier, clokier; Fr. clocher; Luw Iat. clocarium, froro cloca $=$ a clock.] A belfry, a clook-tower. "Clokerrs
Prompt. (elocher P.) or belfray. Campanilds."
olðck (1), * cloke, * clok, " clokke, s. \& a. [A.s. clucga; I cel. klukla, klocka; Sw. klocia; Dan. klokke; Wel. cloch; Fr. cloche ; Dut klok; Qer. glocke; Ir. clog; all $=a$ clock, a bell.

The origin of the word io doubtrul, but it; it probably connected with clack (q.v.).]
A. As substantive:
I. Ordinary Language :

1. Literally:
(I) In tha same sense as II.
" When the cloct stroke tweil."-Townoley $\Sigma_{\text {gut }}$ p. 115.
"The clock has atrucken twelvo upon tha boll.", * (2) A wetch, especially one which atrike the hours.

* (3) The striking or atrokea of a clock.
"1 told the clocks and watch'd the wasting tight,".
*(4) The clock of a stockis2g: Flowera or figured work about the ankle, probably becausa used originally of hell-shaped ormaments. "His stuckkeras wilh ellver clocks were ravished
(5) Tha balloon-like fruit of the Dandelinn, Leontodon Taraxacum. Named from the prac tice of childrea, who playfully blow away the feathery globe to ascertain "what o'clock it is."

2. Fig. : A guide, a monitor.
"His equal hal awned them; and his honour, Exception hid kin we true minute, when Exception bid bim mponk, and, at this tilue Shatoesp.: Alle Woll hiat ${ }^{\prime 2}$ nde Welh 12 ब' O'clock $=$ of the clock, is used as equiva Jent to by the clock; as, what o'clock is il $?=$ what time is it by the clock?
"What is it orclocki-Upon the atroke of four."-
II. Technically:
I. Horol.: An instrument differing from a watch ia not beiag adapted to be carried on the person, and having a motiva weight or apring, a train of gearing, iadex lands, and figured dial, and a pulsative device to determine the rata at which the mechanison shall move.
(1) Hist.: The dial was an early invention for keening time. [Drat.] The clepsydra followed next. [Clepsyura.] One of these latter instruments, that of Pinto, b.c. 3.2 was made to sound upon organ-pipes the hour of the night when the dial could not be seen. Wheel-work aet in motion by apinga and weights was known ia the time of Archimedea 28i-212 b.c., and applied to mechanical en gines and toys. Two other appliacea were needful to make a clock, viz., to join the wheela to a pointer which traverged the dial, and to contrive a mode of regulating the speed of tha gong-works. When these features were nnited to complete the nechanism of a clock is not known. Alout A.D. 1000 Ebu Junis, of the Saracenje University of Cordova, in Spain, Saracemic university of Cordova, in Spain, had a pendulum clock to which it is thought that Gerbert, a student at that seat of learn-
ing, and afterwards Pope sylvester 11, added the escapement. ln A.D. i288, a clock was placed in the palace yard, London, and shortly after that date they began to be supplied to cathedrals, churches, palaces, town halls, \&c. till at length they became numerous evary where.
(2) Kinds of clocks now in use:
(a) A church clock is called in the trade a tower clock; its external alpearace is familiar to cveryone.
(b) A chiming clock, sometimes called a musical clock, is one in which the hours or fractions are marked by a carillon. These inatruments wera first made in Germaay as early as d.d. 1580.
(c) A regrulator ls a watchmaker'a clock of superior quality for regulating time-pieces.
(d) An astronomical clock is one which has a compensating peudulun, and is otherwise of marked quality; it is used in determining tine when astronomical observations are being taken.
(e) An electric clock is one whose movements are regulated by electro-magnetic devices.
3. Astron.: [1. Horol.].
4. Elect. : [1. Horol.].
B. As adjective: (See the compounds)

## clock-alarm, s,

Horol.: A device in a clock, which is capalle of auch arrangement that when a certaio hour is reached a repetitive alarin shall be atruck upen a bell. (Knight.)

## clock-calm,

Naut. : A perfect calm.
clocls-aase, s. The frame or case in which the works of a clock are contained.
t alock-finger, s. The hand of a clock.
clock-maker, s. One whose business or profession it is to make and repair clocks and watches.

"There jelogo a) wintor ret to clown ap and unsts ile parts, and resture thin erstht to lo ia former compact II Figuratively:
II. Figuratively:

* 1. To guard, to protect, by encompassing.
*2. To contaín, to include.
"the hible lu which the lawe in closart"

3. To finish, to end, to bring to a conclusion, to consuramate.
4. To agree or settle on; to conclude: as, to $e^{\prime}$ 'ose a bargain.

* 5 . To include, to endow with.

According to the gitt which bounteona nature
6. To bring a matter to an end
" When it becana clear that this artifice was ernploved for the purpose of causing delay, the returning
ofticer tows on hlinself the responsibitity of cloting
the pouks. - If scaulay: Hist. Ang, eh. xxiv.
B. Intransitive:
I. Literally:

1. To shut, to unito or coalesce, to come together, as the parts of a fracture or wound.
"Tho she made his woundes close."
'In plants, you may try the forco of imagil 268.
"In plant*, you many try the forco of imagleation
2. To terminate, to end, to come to s conclusion, to conciude.
"That great disy closed In peace; and the restored WRnderer reposed asfe in the palace of hil ancestors" Telograph, Aug. $3,1881$. 3. To come to terma, to enter into an agreement.
IL. Fig. : To join in e hand-torhand fight, to irapple with.
"In yooder shout the volce of condict roared;
The ghadowy hosts are elasing on the plain-
Now. Gud end Sh. Iago strike, for the good esuse of
Spain!" Scott: The Jirion of Dow Etoderick, ver. 20.
C. In special phrases:
3. Toclase in with: The same as To close with (q.v.).
"These governours beot all their though 4 and ap2. To close on or upon:
(1) To ahnt over, to enelose.
"They, and ail that eqpertalnad to them, went down
alive into thin pik and the earth clowed upon them -
(2) To agree or come to terms npon certain points.
(3) To grapple with, to close with, to join in - hand-to-hand tight.
4. To close out: To exclude.

## Parro <br> 4. To close up:

(I) Transtive:
(a) Lit. : To ohut up gaps; to unite or join parte aeparated.
"The armpurers socomplishing the knighte,
(b) Figuratively:
(i) To do away with, to remove.

- (ii) To add.
"Still cloofng up truth to truth."-uruton $t$ Areopag. (2) Intrans.: To move closer to the uext person.
"When thoy wero a quarter of a mille from home the
three placed cloes up, and Spriagtide won . . Daily Telegrajh, Augh, 1881.

5. To close with:
(1) To come to terma or agree with enother. "Intire cownardice makes thes Wrong thla Firtuous
gentiswowan, to close with na "-Shakern: 2 Ben iV. " He took the time when Richard was depos'd, And high and low woith happy Harry closid.
(2) To agree to or secept terms proposed, to sccede to.

* (3) To agres or assent to.
(4) To unlte, to coalesce.
"This spifit porred apon Iron, lets go the weter: the acld sptrit in more attracted by the exxd inxy,
sid lets go the water, to clowe with the fixed body.
Bir I. Newton: Opticke.
(5) To grapple with, to engage in a haud-tohand fight, to join battle.

6. To close with the burd:

Naut.: To come near to the land.
If (I) Crabb thus distinguishes between to close and to shut: "Close ls to shut, frequently as the moans to the end. To close signities aimply to put together ; to shut signifies to put together so close that no opening is left. The eyes are shut by closing the eyelids; the mouth is shut by closing the lips. The idea of bringing near or joining is prominent in the aignification of close ; that of fastening or preventing admittance in the word shut. By the figure of metonymy, clase may be often substitnted for shut; as we may bpeak of closing the eyes or the nonth; closing a book or a door in the sease of shutting: but they are, notwithstanding, very distinet. Many things are clesed which are not to be shut. and are shut which cannot be closed. Nothing can be closed bnt what consists of more than one part ; nothing can be ahut but what has or is aupposed to have a cavity. A wound is closed, but cannot be shut ; a window or a box is shut, but not closed. When both are applied to hnllow bodiea, close implies a stopping up of the whole, shut an occasional stoplige at the entrance. What is closed remains closed; what is shut may be opened. A hole in a road, or a passage through any place is closed; a gate, a wiodow, or a door, is shut."
(2) He thus diseriminates hetween to close, to finish, and to conchude: "To close ia to bring to an end; to finish is to make an end: we close a thing by ceasing to have anything more to do with it; we finish it by really having no more to do to it. We close an acconnt with a jerson with whom we mean to have no farther transactions; we fnish the business which we have begun. It is sometimes necessary to close withont finishing, but We cannot finish without closing. The want of time whll compel a person to close his letter before he has finished saying all he wishes. . . Close and finish are employed generally, and in the ordinary transactions of life; the former in apeating of times, seasons, periods, \&c., the intter with regard to ocenpations and pursuits; conclusion is used particularly on moral and intellectual operations. A reign, an entertainment, ar age, a year, may have its close; a drawing, an exerelse, a piece of work, nay lie finished; a discourse, a story an affair, a megotiation, may be concluied." (Crabb: Eng. Synon.)
(3) For the difference between to close and to end, aee Eno

$\dagger(20)$ Truaty, trustworthy, secret, reticent, reserved.
$\begin{aligned} & \text { But ha, his own affectiona' counsellor. } \\ & \text { Is to hinself-I will not asy, how true }\end{aligned}$
But to bhmeeli so seeret and, ho clone,
so thr from sounding and ditscovery."
Shakesp. : Rom. \&'Jul., 1. 1.

* (21) Having the appearance of concealing nomething suspicious.

(22) Close-fisted, parsinnenious, near.
II. Technically:

1. Her.: Applied to a bird represented with the wings folded closely to the bedy.
2. Phonetics: Applied to a vowel pronounced
with a dipinished opening of the lips.
I Crabb thua diatinguishes between the djectives close and compact: "Proximity is axpressed by hoth these terins, the former in a general and the latter in a restricted sense. Two hodies may be close to each other, but a body ia compract with regard to itself. Contact is not essential to constitute closeness; but a perfect adhesion of all the parts of a body is essential to produce compuctness. Lines are close to each other that are ae parated but by a small apace : things are rolled together in a compact form that are brought within the mallest possihle space." (Crabb: Eng. Synon.)
B. As adverb:
I. Literally:
3. Near, close to, in proximity to.
"Behtid her Death

4. Tightly, securely.
-W Wuppose this bag to be tied close aboot, towards II. Figuratively:
5. In an exact mander; closely following an origital, or a rule or standard.

"Openilche nought so doos." -7 reetifa, i. 241

3. Constantly, alwaya, by a slight transition from the use of the teran in Eagish : as, "Do you ay get a present wheo you gang to see your auatie?" "Aye, close." (Scotch.)
T To keep close to a point : Not to waader from the matter or subject in question.
7 Crabh thus distinguiahca between close, near, and niyh: "Close is more definite than near: houses atand close to each other which are almost joined ; men stand close when they touch each other ; persons are near each other when they can converse together. Near and nigh, which are but variations of each other in etymology, admit of little or no difference in etheir use; the former however is the most general. People live near each other who are

In the same atreet; they live close to each other when their houses are adjoining. Close is annexed as an adjective; near ia employed only as so advert or preposition, We apeak of close raoks or close lines; but not near ranks or near llnes." (Crabb: Eng. Synon.)
I Obvious compounds: Close-barred, closeclasped, close-folded, close-pent, clase-ranged, close-woven.
closo-banded, $a$. In close order or array ; thickly ranged.

menth lis76. (HiLliveth.)
B. Parliamentary Rules: The power in cer fill circurnstanses of termiuating a debate in the Honse of Commons, whilst yet there are members willing to carry it on for an indeff-
tate, făt, färe, amidst, whãt, fâll, father; wē, wĕt, höre, camel, hẽr, thêre; pīnc, pĭt, sïre, sïr, marîne; gō, pơt,

iftely long period. The British Honse of Commons is the model on which all similar deliberative assembiiea elsewhere have been formed ; yet mooner or later every one of these has fonnd it impossible to carry on the huainess brought before it unless it has assnined to itaeif the power of dociding when a debate has lusted long enough, and ohould tarminate. Many years went by, and still the good senas and yoderatloo of the sucessively defeated minorities in the Britioh House of Commoum minorited it innecessary to taks any etank for rendered in uncecesary Hake of Cor the curtainnent of superntur till nearly fonr-fifths of the nineteenth century had run its courss, was any serious deslre felt on either side of the House to alter thi happy state of things. Shortly before the tine, however, the device of obstructing simply for obstruction's sake began to be cultivated as an art, and wess brought in a brief period to High perfection. Dsy by day time was intentinnally wasted by amall minoritiea of the house, and oftener than once when the members wished to go home, a section of the lrish representatives forced phon thsm "an stlnight sitting." New rules were adopted, to 1882 to overcome thie difficuity The first plit 1882, the gave permiss chairman of conaltio the wo house to ciose debate and go on if, wien a mution to that effect was carried by a majority, its aupporters appeared to amount to 200 , or, in the avent of the minority leiog less than 40, to amount to more than 100. These rules were altered in the direction of greater atringancy by the Conaervativea in 1887. Whatever ia under diacussion, tie usual form for puiting the closure now is "that the queation be now put, and it is voted apon withont debate. The word closnre has not been adopted in the Congress of the United States but aimilar methods of delaying business hove long axisted, and rules have recently been donted in the Honse to overcome them. Th ald rulea exist in the Senate, and obatruction may go on thare unchecked.
alot (1), "clate, * olotte, s. [The earlier apelling of clod (q.v.). A.S. clate $=\mathrm{s}$ burdock hur; Dut. kluit, klout $=\mathrm{s}$ clod, s iump; Icel. $k l d t=\mathrm{a}$ bail, a knob; Sw. $k l o t=\mathrm{a}$ bowl, a giobe ; Ger. kloss = a clot, a clod.]

A. As substantive:
I. Ordinary Language:

1. Literally:
(1) Any fabric woven for dress or covering, of flbrous material, whether animal or vegetable.
"In frokkee of fyn cloth."
(2) A plee (2) piece or pieces of such fabric applied to some particular use.
(a) A saii.
"Gederen to the gyde ropea, the grete ototh falles."
(b) A covering for a table; a table-cloth.
"Hil lolde bord and aprudde olorh" - Lifo of Beket, 892
(c) A canopy of state.
"The king stood yp under his cloth of stato. . . ."-
(d) The canvas on which $s$ picture is psinted.

Who fears e sentence or an old man's as.i.
eball hy a painted doth th be kept in ara.".
Shakesp.
Lucrece, 244.
(e) Pl. : The coverings of a bed; bed-clothea Oasing on her midnight foes
Ohe trind deach way her rrighted hend.
(3) Clothing, dress, apparel (obsolete except in the piural). [Clothes.]
"Thi cloth hi which thou were hlld fanlde not for
eldnasse."-Wyctife: Deut. vili. 4. (Purvey.) "III neer distrust my God for clath and hrend,
While illes fourish, and the raveu's fed."
2. Figuratively:
(1) The clerical profession.
"Strong sipeals were made to the priesthood.
Would they tanely permitsogross an hisult to be
offered to their cloth "-Macaulay.
(2) The clergy.
(3) The menibers of any profession.
II. Technically:

1. Textile Fabrics:
(1) Hist.: For the rise and progress in Engand and eisewhers of cioth manufactures, see Calico, Cotton, Silk, and Woollen.
(2) Present state: For the processes used in the manufacture of cloth, ree Weavino. After cloth has been woven it ia aubjected to the following operations: brsying or acouring, burling, miiling or fuliing, dressing, shearing, pressing, hot-preasing, bolling, steaming picking, flue-drawing, msrking, haling, and packing. Some of thess processes may be omitted, but in ail cases a large number of them require to be employed.
2. Naut.: The cinths in a saii gre the breadths of the canvas in its whole width
3. Law:

TI Court of Green Cloth, or Board of Green Cloth: [Marshalsea Court].
B. As adj. : (See the compounds).

Obvious compound : Cloth-making.

## cloth-binding, s.

Book-binding: The art of binding books in cloth. The materiai may be calico, embossed silk, or anytibing similar, often with gold or silver-foil ornamentation.

## cloth-creaser, s.

Fabrics: An appliance ciamped to a table or sewing-machine, and provided with a beveledged wheei, nnder which the fabric is drawn that it may beindented with a creass. (Knight.)
oloth-cntting, 0 . Catting or deaigned

Cloth-outting machine
Fabrics: A machine for cutting cloth into atrips or into shapea for making garments. Various devices lasve been adopted, apecislly knives mounted on a rectprocal plattem or a knife reciprocating vertically ou a constant part, like a acroli-saw, a band-saw, a rotatory outter, de. (Knight.)

## Cloth-aressing, s. The art or business

 of dresaing, clothCloth-dressing machine
Fabrics: A machine ln whleh the nap of woolien cloth is raised by teassls. . It in the same sa a teaseling-machine and a giggingmachine (q.v.)

## cloth-drying, $a_{\text {. }}$

Cloth-drying machine:
Fabrics: A mschine with heated rollers, over which cioth is passed to drive off the moisture acquired in dyeing, wsabing, sic.
cloth-finishing, a. Finishing or designed to finish.

Cloth-finishing machine:
Fobrics: A msching for tesselling and shearing cloth, raiaing the nap and bringing it to an even length. (Knight.)
cloth-folding, a. Folding or designed to fold.
Cloth-folding machine:
Fabrics: A inschine in which wide goods are folded lengthwise, troned, and pressed ready for baling. (Knight.)
cloth-hall, s. A hali at the great centrea of the cioth trade, where mannfactnrers and buyers meet for the transaction of businesa.
cloth-lapper, s. One who foids cloth.
cloth-measuring, $a$. Mesauring or deaigned to measure.
Cloth-measuring machine: A machine by which fabrics, made in great lengths, are meesured of in piecea of convenient length for sale. They are called in consequence piecegoods.
cloth-paper, s. A coarse kind of paper used in pressing and finiahitg woollen cloths.
cloth-plate, s. The plate in a sewing machine on which the work rests, through which the needle passes, and beneath which, ws the case may be, is the looper or the lowal spooi or shuttle. (Knight.)
cloth-press, s. A hydrostatic press io which woollen cloths are suljected to pressure.
cloth-prover, s. A magnifying giass nsed in numbering the threads of weft in a given space of cloth. (Ogilvie.)
oloth-shearer, $s$. One whn shears or trims cloth and frees it from superfluous map.
cloth-shearing, $a$. Shearing or designed to shear.
Cloth-shearing machine: A machine for cotting to a:i even length the filanents of wool drawn out in the process of teaseling. (Knight.)
oloth-smoothing, a. Smoothing or deaigned to smooth.
Cloth-smoothing machine: A device for snoothing and ironing cloth in the piece.
cloth-sponger, 8 . A device for dainping eloth previous to ironing it.
oloth-stretcher, s. A device in which cioth is drawn through a series of frictional stretching bars, sud passed over sprcading rollers so as to equalise the inequalities on its surface, and enable it to be firmly and amoothiy wound on the winding roll. (Knight.)
Cloth-tearing machine: A machino conaisting of a fluted roller and kuife-edges, the latter both pushing the cioth into the flutes and tearing it to pieces as it proceeds.
oloth-teascler, , A machine for raising the pap of cloth. [Teaseling-machine.]

## cloth-varnishing, $\alpha$.

Cloth-varnishing machine: A machlue for varnishing or cnameling cloth.

## aloth－wheel，$s$

1．A grinding or polishing wheel，conslating of heavy cloth，sometimes felted，charged with an abreding or pollahing msterial，such as pumice－stone，claik，rotten－stone，crocnis， patty－powder，roage，\＆c．
2．A form of feed－movement in sewing machioes．It consists of a serrated－faced wheel protruding upward through the eloth－ plate，and possessed of an intermittent mo－ tion．（Knight．）
cloth－worker，©．One engaged in the manafacture of cloth．
＊cloth－yard，s．A measure for cloth， differing slightly from the modern yard．
Cloth－yard shaft：An srrow a cloth－yard in leogth．

When clouds sre seen, wise men put on thoir ciokka"

## II. Figuratively:

1. A mass or volume of smoke or dust recembling a cloud and obscuring the sight.
2. The dusky veins or markings in marble, precious stones, \&e.
3. Aoything which causes temporary darkess or obscures the sight.
"I ignita the lamp; the tube for a moment seems

4. Any temporary depression or obscurity.

Yes all the clouds and conficts sintle at lest
Nor ask why ctouds of manes That Abencerrage.
. mber or multitudo.
. . . amongst $x$ cloud of witnenses, . . ."-.Atterbury.
6. A kind of light woollen shawl worn by adies.
It In the clouds: Applied to one soaring in tights of fancy and imagination far above terrestrial tbings; building castles in the sir.
Under a cloud: In temporary disgrace or misfortune.
"Gentlemen that are under a cloud,"-Fielling:

## B. Technically:

1. Botany: Clondberry (Rubus chamomorus)
2. Meteorology:
(1) Composition of clouds: A cloud is a mass of vapour condensed into minute dropa or vesicies, and differiog from fog chiefly in this respect, that fogs occupy the lower whilst clonds float in the upper regions of the atmo ophere. Both derive their origin from va pours which rise from the sea, from fresb water, or from the moiat earth.
(2) Different kinds of clouds: In 1803, Mr. Luk9 Howard divided clouds into four principal kiods, the Cirrus, the Cumulus, principal kiods, the Cirrus, the Cumulus, the Stratus, and the Nimbus. Two of these are frequently combined: hence he added
to the former list of clouds the thres folto the former list of clouds the thres following - Cirro - cumulus, Cirro-stratus, and
Cumulo-stratus. Tha Cirrus is a small fibrous or wisp-like cloud, composed of what are popularly called " Dlares'-tails," so high in the heavens that they are probably frozen. Their appearance io numbers often precedesa change of weather. The Cumnlus, resembling great mountains of wool, is not so high. Several large ones are often seen on a summer morning. If thess diminish duriag the day, the probability is in fayour of fios weather, but if they muitiply, and become surmounted by Cirri, the indfication is of approaching storm. Cumuli in winter are not so frequent or well Cumuli in winter are not so frequent or well
marked. The Stratus is a large snd conmarked. tinuous sheet of dark cloud, seeming to rest on the horizon at sunset, and often vanishing at sumrise. The Siratus is frequent in sutumn
sud rare in spring. The foregoing three all melt into one to form the fourth, viz., the Nimbus, or rain-cloud. Its sppearance is familiar to all. The Cirro-cumulus is, as its name imports, a coubination of the Cumalus and the Cirrus. It consists of a series of small round masses. The aky covered with them is popularly known as a "Mackerel" sky. It is best seen in warm and dry summer weather." In the Cirro-atratus the Cirri have deacended from their airy beight and become borizontal. The aspect is like that of shoals of fish. The Cumulo-atratus is like a cumulus of fish. The cumulo-atratus is like s cumulus Its tendency is to spread, settle down into a nimbus, sud ultimately disappear in rain.
(3) Height of clouds in the sky: The mean beight of clouds in winter is from 1,300 to 1,500 yards, and in sumntaer 3,300 to 4,400 . M. D'Abbadie observed a cloud in Ethiopia ouly 230 yards above the ground; and when Gay Lussao asconded in s balion to a height of 7,650 yards, tbers were cirri overhead apparently at a much greater elevation,
(4) Theories of the formation and suspension of clouds: According to Hutton, while the
temperature of a stratum of air saturated with moisture diminishes in an arithmetical progression the capadity of retaining the moisture In the form of invisible vapour diminiahes in a geometrical ons: hence, when the temperaa geometrical ona: hence, when the tempera-
ture of a saturated stratum of air falls, the ture of a saturated stratum of air falls, the
formerly invisibis vapour takes the aspect of $a$ formerly invisibie vapour takes the aspect of $a$
cloud. There are various opinions as to why cloud. There are various opinions as to why it floats. Halley and Saussure considered that each vesicle of water in the sky was hollow, and
that consequently it floated like a balloon ; a mora modern view is that the veaicles are carried upwands by ascending currents of air. Clouds also which appear stationary are realiy descending slowly; but their lower part being dissipated by more heated strata of air, and their upper parts increased by fresh condensation, their descent is diaguised so that they appear stationary. (Ganot, do.)
(5) Electricity of clouds: Ass rule the clouds are all electrified, some positively and others negatively: in soms there is more, in others less, of tension.
IT Compounds of obvious signiffcation : Cloud-break, cloud-covered, cloud-dispelling, cloud-fenced, cloud-girt.
cloud-ascending, $a$. Bo high as to reach almest to the clouds.

* oloud-born, a. Born of a clond.

cloud-built, a.

1. Lit.: Built up or consisting of clouds.
2. Fig.: 'Vislooary, imagiaary, chimerical.
"And so vanished may cloud-built palace."-Cold-
cloud-burst,
s. A beavy aad violeo downpour of rain over a very limited area.

## cloud-capt, cloud-capped, $a$.

1. Lit.: Capped or topped with clouds; reaching to the clouds.

## "The bolts that upare the mountain's wide

His clotad-capt emiueuce divide,
And spread the rull round."

2. Fig.: Dreaming ss one in cloud-land. "b. . in tha highest eathusiasm, amid polumes of
tohaco-smoke; triumphaut, cloudi-capt without aud tohacco-smoke; triumphauth coud-capt without aud
within the assembly broke up, each to his thoughtul pillow. - Carlyte: Sartor Resartus, bk. i., ch. \&
cloud-compeller, s. A translation of Homer's veqènүерєтa (nephelēgereta) $=$ ciouddriver, sn epithet applied to Jupiter.

cloud-compelling, $a$. Having power over the clouds to gather or disperse them.
"Th" uodaunted guard of cloud-ompolling Jove"
cloud-drift, s. Floating cloudy vapour broken clouds, cloud-rack.
cloud-eclipsed, a. Eclipsed or hiddeo by clouds

Why ber two sing were cloud-ectinsed so.
Wor why her falr cheeks overrwazhe with wo."
Shakesp. : Rape of Lucrece, 1,224,
cloud-king, $s$. A being who had supreme power over the cloudend the westher.
"One of these is termed the Water-King, nnother
the Fire Xlug, and a thind the Clourding. - Scott: Tie ErL-King. (From the German of Gocthe.)

* cloud-lxissing, $a$. Situated so high as almost to reach the clouds; very lofty.
'Threatesing cloud.kissing Illon! with annoy."
Shakesp.: Rape of Lecrece, $1,370$.
cloud-land, s. Dreamland; an imaginary locality conjured up in the mind, and dissipated as easily and quickly as a vapour.
matters could be bo arranged, without trespass on the the milrecolous, that the strean which threat-11ed him and his fookk ehopld be caused to shrink withim its proper
boundr. - Tyndall: Frag. of Science (isd ed.), 11. 33 .
cloud-piercing, $a$. Reaching into the clouds.
cloud-rack, s. Tho same as Cloud-onift (q.v.).
cloud-ring, 8. (See extract.)
"It is at bome distance. from about 50 to $200^{\circ}$ from their violence. They originate in or near thone ho the clond -y-ciouded apaces, sometimes spoken of es the times collected into heave rele (partly with vivid thectrical action, and a comparative vaconm is und.
denly anned. towarde which air rushes from on all sides, "-Lor. Avhburton: Address to the Geographical Society, 1882.
cloud-rocked, a. Rocked in the clond by the passing storm. (Moore.)
cloud-topt, $a$. Cloud-capt; topped or capped with clouds.
"Modred, whose mantiek nong
Made huge Plinimimmon bow hieloud-topt head."
Eray : The Bard.
oloud-touching, $a$. Rising so high as to touch the clouds.
"Cloudtouehing mountains atedfast stand."
Sandyb Ft. p. 102

## cloud-wrapt, a

1. Lit.: Enveloped in clouds
2. Fig.: Wrapt up in idle dreams and fancies; sbstrscted.
cloud, n.t. \& i. [CLOUD, s.]
A. Transitive:
I. Lit. : To cover, obscure, or overspread with clouds.
"The moon being clouded presently Is nilssed.
But iittio stara may hide them when they list.'
II. Figuratively:
3. To mark with veins; to variegate with colours or shades in a manuer resembling clouds.
"The clouted ollve's easy grain." Pope.
4. Tooverspread as with a cloud; to darken, to make gloony or sad.
"What willen tury ctouds his scorniful brow?"
5. To make less brigbt or sharp; to dull in intellect.
"So spake he, clouded with hie own conceit."
t4. To obscure so as partially to hide, on make less evideat and plain.
${ }^{4}$ If men would not exhale rapours to eloud and to keaven for want of light "-Decay of Piety.

* 5. To throw into the background, to surpass.
*6. To defame, to sully the reputation of to libel.

I would be not estander-by to bes.
My woverelgn mistress clowded so."
Shakesp.: 1Finter; Tale, i. a

* B. Intrans.: To grow eloudy or dull, to be obscured. (Lit. fig.)
* cloutd'-age, s. [Eng. cloud; -age.] A mass of clouds; the state of being cloudes or clondy.
ol6ud'-běr-ry̆, s. [Eng. cloud; -berry.]
Bot. : A dwarf bramble (Rubus chamomorus) It has herhaceous stems and orange-yellow fruit, the latter well flavoured when fresh The plant grows in turfy Alpiue boge.
"In some parts of the highlaods of Scotiand the rien or knot-berries, aud they are periaps the mot rien or knot-berrieg, aud they are periaps the mos Scoteh hishiauders. On the sidids Rnd near the base of the mountalise $1 t$ may be collected for several
months in succession."-Loudon: Encyelop. of Oarden mouths in
cloùd'-ĕd, pa. par. or $a$. [Cloun, v.]

1. Ord. Lang. : (See the varb).
2. Bot.: Having its colours nuequally bleuded together.
cloùd'-1-ly̆, adv. [Eug. cloudy; -ly.]

* t. Lit.: In a cloudy manner; overspread with clouds.

clŭb, *clobb, * clobbe, ciubbe, [reel. klubba, klumba; Sw. klubba; Dsn klub $=\mathrm{s}$ club $;$ klump $=$ \& clump, s lump.] L. Literally:

1. A heavy staff or stick, now generally of wood, thicker at one end thsn the other, sod fitted to be carried in the hand.
"Hanelok hauede withe a ciubbe
Hanelot hauede withe an ciubbe
2. One of the four suits at cards, represent ing a trefoil or clover-leaf.
TT The name is s transiation of the Span bastos = cudgels or clubs, which is the Spanish nams for the sutit. The figure by which the clubs are denoted on a csrd is a trefoll: the Fr. nams being trèfte $=$ (1) trefoil, (2) a club (st cards). Cf. Dan. klover = (1) clover, (2) s club (st cards); Dut. kiaver $=$ (1) clover, trefoil, (2) s club (at cards). (Skeat.)
3. A round, solid mass; \& knot, used of a fashion of dressing the hsir.
4. An associstion or number of persons combined for the promotion of some common object, whether political, socisl, or atherwise. The use of ths word in this sense probably comes from the preceding one (3), as meaning s knot or gathering of men. Another definition, interesting est all events, is suggested by Csrlyle in the extract given below.
IT The earliest London club of sny celebrity Wrs established about the beginning of the 17th century, st the Mermsid Tsvern, Fridsy Street. Annong its membera were Shskespeare, Sir Walter Raleigh, Beaumont, Fletcher, snd Selden. Ben Jonson figured at another club, which met at the Devil Tsvern, near Temple Bar. Of other clubs, the Literary one, estab. lished in the year 1764, had smong its mem. bers Johnson, Boswell. Burke, sud Guldsmith. There are numerous clubs in the cities of the United States, such as social, Iitersry, histuricsl, scientific, military, dramatic, meresntile, agricultural, eporiting, political, dc. some of thene Were of Colonial origin, sud others are based on colonial institutions, but the great majority of them are of recent origin and phrpoze.
French political clubs gained world- ceide the French political clubs gained world-wide notoriety from the sctive part which they took in the first French revolution. The most eclebrated wss the Jscobin Cluh, founded st Versailles in 1789, and called originally the Breton Club. This sind other political French clubs were sbolished on September 4th, 1597. They Were revived in 1848, but were suppressed sgsin in 1849 snd 1850

Clề'-nǐ-ăc, a. \& 3. [Lat. cluniacensis.]
A. As adj.: Of or pertaining to Cluny, a commune and town of France, is the depart ment of the Saône-et-Loire, 200 miles S.S.E. of Paris, and aeat of the monsstery described nader $B$.
B. As subst.: A monk belonging to the monastery fonaded at Cluny, or the order which aubsequeatly developed from it. In 910 , Guillaune (William) 1., Duke of Aquitaion and Count of Auvergne, and Bera or Berno, Abbot of Gigniac, under his auspices, founded in Cluny, then a mere village, an abbey of Benedictine monks. In the loth century, Odo, a French nobleman, being made Abbot of Cluny about 927 , rendered the diseipline of the monastery more atrict. Many other monasteries followed the example, and the Chniacensians became celchrated througli Europe, and soon aequired great wealth and power. In the 11th century they founded a community or congregation, separate from that of the ordinary Benedictines. In the 12 th century they were corrupted by the wealth they had acquired, and their discipline became greatly relaxed.
About 1077 or 1078 , William, Earl of Warren, aon-in-law of the Conqueror, brought Cluniac mooks into England, and erected for tbem a house at Lewes, in Sussex. la 1525, Cardiaal Wolsey diasolved four houses of Clumiacs. The monastery at Cluny itaelf was three times pluadered by the Huguenots, and during the Muadered by the Huguenots, and during the tirely destroyed.
Clû̀nĭ-a-çĕn'-sí-anş, s. pl. [Lat. cluniaconses, pl.] [Cluniac.] The same as Cluniacs.

cōaçh, v.t. \& i. [COACB, y.]
A. Transitive:

## 1. Ordinary Langrags:

-1. Literally:
(1) To convey or carry in a coach.

(2) To yoke or drive together, as horses in e coach.

- For wit yo may bo coachid together."-Somson: 2. Figuratively:
(1) To teach, to inculcate.
 quartore"-Watarhouse: Apok for Learning, 1633 ,
(2) To prepare for an examination; to act as a coach to.
 II. Aoving: To eet as a coach to during the training of a craw.
B. Intransitive:
I. Ordinary Language:

11. Lit.: To ride in a coach.
12. Fig.: To study or read with a coach.
II. Roving: To net as a coach.
"On the return Journey Mr. Mi. conchod from the
medde" - Dally Tolegraph. Jail, 30,1832
cōaçh'-ēe, s. A coachman. (Slang.)
cōagh'-fül, a [Eng, coach; -ful.] Enough to fill a coach.
"Under the Arot are comprebended an those who

- cōaçh'-rill-něss, s. [Eng, ovachful ; -rese] An abnndance of coaches.

©Öaçh'-ǐng, pr. par., a., \&\& [COACH, v.] A. As pr. par.: (See the verb).
B. As adjective:

1. Lit : Pertaining to the carriage of persons or goods in coaches.
2. Fig.: Acting as a tutor, Instructing.
C. Aa substantive:
3. Lit: The act or business of carrying goods, dce, in cosches.
4. Fig. : The act of preparing for an exam!nation.
"Oōaçh'-Iěss-něsts, a [Eng. coachless; -ness.] Absence or want of coaches. (See extract under corchfulness.)
t cōagh'-1ět, \& [Eng. coach, end dim. suff. -Let.] A little coach.
"In my little eoachise $t$ eonid bresthe froer."-Car
cöaçh'-mann, s. [Eng. coach, and man.] One whose trade or profession it is to drive a coach.
coasç'-mann-sh1p, s. [Eng. coachman ; -thip.] The craft or skill of a coachman; skill in drivIng coaches.
"His akm in coachmanship, or driving chatse",

- cō-ăt', "co-act-It, a. [Lat. coactu2] [CoAct, v.] Forced, constrained.
"I think my Lordeserpositiog coact, in that ho wm
admit nome to hane broght forth the bread and wine admit none to hand broght forth the brend and wine
bat Melchisedee allono--heusowing botua droerce guell ana J. $\mathrm{Knox}, \mathrm{F}$. $1 \mathrm{ilj},-\bar{n}$
*oo-act' (I), v.t. [Irat. coacto $=$ to force, intens. of cogo (8np. coactum) $=$ to drive tosether, to foree; cootracted from $c o=c o n$, and apo to drive. $]$ To drive, to force to. gether, to compel.
"In conalusion, both garrinong and the inhal
- obo-ăct' (2), v.i. [Prer. $\infty=\omega=0=w i t h$, together; and Eng act (q.v) J To act togethes or in concert ; to unite.
"Bot if 1 tell how these tro did coace
8bail 1 not lic in puhilishing \& truth?
Shakesp, Trorime F , L
00-Ăet'-ad, a. [COACT (1), v.] Forsed, con-
straiued. straiued.
- oó-ac'-tion, s. [Lat. coactlo $=$ (1) a driving together, (2) \& conpelling ; coacto $=$ to comper, to force.] [Conct.]

1. Compulsion, force.
 Bithop Wooton a Christlan NVanusth, D IH. 1576
2. A bringing or joining together.
 Englyda Vosarice, L 16 (1560)

* cō-ăé-tive (I), u. [Lat coactus, pa. par. of cogo $=$ (1) to drive togei..er, (2) to compel. Having a restraining or impeling power: compulsory, restrictive.
TThe Lovitical priets, in the old itw, pever arro-
gated puto themedves, any temparal or cacsesp gated mito them
power."-Ralelgh
" cō-ax'-tive (2), $a_{0}$ [Pref. $\infty=\boldsymbol{c o n}=$ with, together, and Eng. active (q.v.).] Acting together or ja union.

With what's nnreat thou coactive art
And fello "t nothime shakes, ivinter's Tate is

- cō-ăc'-tive-Iy, adv. [Eng. coactive (1); ly.] In a coactive manner, by compulsion or reatriction. (Bp. Bramhall.)
 $\Delta$ working or acting together; nnity of eetion milio objects in theit then pathy and coactivity, that trum zino pperelpient."-Morv: Philowophicail Writimes:
cö-ăd-ăp-tā'-tion, s. [Pref.co $=00 \mathrm{~m}=$ with together, sad Eag. adaptation (9.v.)] Metua) adaptation or suitability.

cö-a-dăp'-ť̌d, a, [Pref, co = cons, and Eng. adapted (q.v.). Adapted to one nowthes g . mutually adapted or anited. (Owen.)
- cō-ad-hër'ent, a. \& \& [Pref. cos=em and Eng. adherent (q.v.).]
A. As adj.: Clinging together, adheriafs adherent.
B. Aasubstantive:

1. Ord. Lang. : An edherent, a eupporter.
2. Ship-building: The fayed piece callen bilge-keel. (Smyth.)
† cō-ad-ja'-qěnçe, s. [Pref m, and Eng, ens jacence ( $\mathrm{q} . \mathrm{v}$. ) ] ] The quality or atate of being coadjacent; nearness, closeness of things ts each other.

tco-ad-jä-çent, a. [Pref. co, and Eng. ad. jacent (c.v.).] Mutually adjacent, clowe to each otLer.

* cō-ăd'-ju-my̆nt \& [Pref. co=con; Lat adjumentum, for adjuvimentum = helip; ad juvo $=$ to help, to aid. $]$ Mutual belp or ac atstance.
cō-ad-juist, v.t. [Pref. $c_{0}=c o n$, and Eng ndiust (q.v.).] To adjust by mutual adaptation.
oō-qd-jŭs'-tĕd, pa. par. or a. [CoAnsner,]
có-ad-jŭst'-mĕnt,s. [Eug, coadjust; -ment.] The act or process of coadjusting; the stato of being mutually adjustet or adapted.
- cö-ad-fû'-tant, a. \& s. [Pref. $c o=c o s$, and Lat. adjutans = helping, assisting.]
A. As adj.: Co-operatiog, assisting. "Thractus coadfutant, and the roar
Phatpo
B. As subst. : An assistant, a co-operator. "Oates or mome of his coadjulanis"-Norti: Rxoman p 198.
* cō-ădi"-jut-tā-tõr, s. [Pref. $\quad \infty=c o n$, and Lat. adjutator $=$ a helper.] An assistaut, a condjutor.

－co－ad－j ${ }^{\prime}$＇－ting，a．［Pref．$\infty=$ con，and Lat． adjuto $=$ to help．）Mutuslly assfating or aid－ tag；co－operating．

＊coaks（1），s．［Coke］
cōar．（2），s．［Etym，doubtful．］
1．Carpentry：
（1）A projection of the nsture of a tenor from the general face of a ocarfed timber．It occupies a recess or mortise in the counter－ occupies a recers or mortise in it is called psist fsce of the other timber．it is called． （Knight．）
（2）A joggle or dowel by which pieces are united to pravent them alipping past each other，or to tasten them together．（Knight．）
2．Mach．：The hole gnsided by metal in sheave through which the pin goes．
3．Naut．：A small perforated triangular hit of brass inserted into the middle of the shiver （now called sheave）of \＆biock，to keep it from splitting and gatling by the pin whereon it turns．Called also bush，cock；or cogg，and dowel．（Smyth．）
＂Coaks or dowelk，are fitted lata the beams and
coees of vesuels to pravent their sllppling．＂－Smaych
cōakr，v．t．\＆i．［СоАк（2）．］
Ship carp．：To perform the process of coak－ ing（q．v．）．

Cōal'-Ing 's. [COAR, v.] Uniting pleces of spar by means of tabular projections, formed by cutting awsy the solid of ons plece into a boliow, so as to make a profection tn the other
fit in correctly; the butts, the pisces from drawing asunder.
cōal, * coale, ${ }^{*}$ col, ${ }^{*}$ cole, ${ }^{*}$ coole $\rightarrow$ coylle ${ }^{*}$ oolll ${ }^{*}$ coyle, ${ }^{*}$ coll (sing.), Gells, ${ }^{\text {Golys (pl), s. \& a. [A.S. col ; O. H. }}$ Ger. chol, cholo; M. H. Ger. kol; Ger. kohle;
Dut. kool; Sw. kol; Dan. kul; L. Ger. kaal.] A. As substantive:

I Ordinary Language:

1. Charcoal; a piece of wood or sny other combustible, Ignited and hurning, or charred or extinguished. (Generally qualified by an adjective, as a live coal, a burning coal, a dead coal.)
"gharparrowe of the mighty, with cocale of jualper."
2. In the same sense as II. I.

I Pit-coal (Germ. Steinkohl $=$ stone.coal) (Speed, Wallis, \&c.) ; Sea-coal (Shakesp.) ; Shipcoal (Old chartera) : Carbo maris, Carbo fossilis, te., used as distinctive terms. [11. 1.]
T To blow a coal: To tan a quarrel

## "I do bellave

You are mine enemy and make my challoage
You shall not be my judge: for it fo you
Hhre stown this coal betwixt my lord and me;
Shakesp. : Hen. VIII, it.
(1) A carld conl to blaw at: A proverhial phrase still cominunly used to denote sny work sat eventually is quite unprofitable. (Scotch.)
"If I had no more to look to but your reporta I

(2) Precious coals! An exclamation of surprise. (Nares.)
"Lot me see how the day goes (hee pults his watch

(3) To bring over the coals. [To haul over the coals.] (Scotch.)

Bnt timo that trien such proticks part
Brought me out oer the coals fu' fisti"
(4) To carry coals: To put up with insults, to submit to any degradstion. The origin of the phrase is this : thst in every family the cullions, the turnspits, the carriers of wood and coals were esteemed the very lowest of menlals. The latter in particular were the drudgea of sll the rest. (Nares.)
shakesp.i Rom. my word, well not carry sonla"-
(5) To carry coals to Newcastle: To do snything stuperfluous or unnecessary.
(6) To haul (or bring) over the coals: To cold, to call to account.
II. Technically:
I. Min.: A carbonaceous mineral aubstanca, blsck, shiny or dull, easily broken, often splintery, infammable, and used for fuel. It is composed of carbon ( 75 per cent.), hydrogen, oxygen, snd soms nitrogen, with siliceous and other earthy impurities (ash). It consists of compressed and chemically altered vegetable matter, chiefly extinct kinds of lycopodiaceous trees. As the successive junglegrowths [Coalmeasures] sccumulated their stems, leaves, and spores, hydrogen and stems, leaves, and spores, hydrogen and
oxygen were evolved with some of the carbon. oxygen were evolved with some of the carbon.
The relative proportion of carbon in the mass The relstive proportion of carbon in the mass
Was increased, the woody fibre reduced in Was increased, the woody fibre reduced in
volume to one-ninth, or even one-fifteenth, of its original bulk, snd the mass became black, shiny hydrocarbons, with imbedded chsreoal ("mother-coal"), due to decomposition of trees lying exposed to the air or dull black hydrocarbocs, resulting from the consolidation of decomposed vegetrble pulp, like soft
.
7 Dana divides whst may be called the species, termed by him Mineral Coal, Into the following varietics: (1) Anthracite, (2) Native Coke. (3) Csking Coat, (4) Non-caking Coal, (5) Csnnel Coal (Parrot Coal), (6) Torbanite, (7) Brown Coal (Llgnite), (8) Earthy Brown Coal, (9) Mineral Chsrcoal. The first variety has only $3-46$ per cent. of bituminous matter, the sccond has none, snd the rest vary in this respect.
2. Geol.: Geologically cosl oceurs as s stratifled rock, interbedded with clays, ironstones, sandstones, snd limestones, in what are termed cosl-messures. The best coals are termed cosi-messures. The best coals
belong to the Carboniferous series of the belong to the Carboniferous series of the
Palæozoic system ; hut much cosl of ister
(Neosoic) ages is found in various parts of the
world, though, in that case, eithermixed with world, though, in that case, either mixed with
or passing into lignite, e far less valushle fossil or passing into lignite, a far less valushle fossil
fuel, because little of ths hydrogen, oxygen, Inel, because little of ths hydrogen, oxygen,
and nitrogen has been oliminated hy chemical and nitrogen has been oliminated by chemical
chenge, and thus as much as 90 per cent. of water remains in lignite, whils good coal has seldom mois than 5 per cent. When lateral pressure has zoms into operation on the coalmeasures, more hydrogen (with soms carbon) has been driven off, and thg coal metamor phosed intoantliracite, which has 90 per cent. of carbon. Soms coals bsve becoms merely anthracitic. Other coals have had very much carbon ("mother-cosl") in them orlginally. Hence the conditions producing "Steamcoal," that is, either (1) coal good for raising coal, that is, either (1) coal good for raising oteam quickly, or (2) smokeless coal, suited
for steam-ships. According to the decontposition of the vegetalle metter, and the resulting combinations of carbon and hydrogen, fossil fuel is more or less bituminous when burat.
3. Comm : The following are the chief kinds of cosl and associated carbonsceous substances used in trade and msdufactures:-
(1) Highly bituminous (Gas-cosls): Albertite, produced (like rock-oil, \&c.) from coal by natural causes; Dysodil or Tasmanite, and "Better-bed" coal, made up of spores; Csnnel, Parrot coal, Boghead coal, Torhanitevegetabls mstter much altered.
(2) Common bitnminous (Honsehold coals) : Caking, Coking, Cherry, Splint, and other coals-layers of charcoal (" mother-coal ") snd hydrocarbon.
(3) Semt-bituminous (Free-burning Steamcoals) : (a) Charcosi, sbundant in origidal formation ; (b) Hydrogen and carbon partially lost hy chemical chsnges.
(4) Anthracitic (Steam-coal, \&c.): Hydrocarbon nearly all lost by chsnge.
(5) Anthracite: All the hydrocarbon lost by pressure, \&c.
(b) Coke: (a) Nstural, and (b) Artificialhydrocarbon lost hy direct heat.
I Linormons beds of coal exist in the United States, principally of the hituminous variety, States, principally of the hituminous variety,
though this country pussesses what are probahly the largest deposits of anthracite in the anly the largest deposits of anthracite in the
world. The entire ares of these coal beds is World. The entire ares of these coal beds is
about 200,000 square miles, being 83 times as about 200,000 square miles, being 83 times as
great as those of the British 1slads. The quantity of coal mined in the United States is small in proportion to the size of the beds, but is anoually increasing.

A mase of coal when broken splits in three directions: (1) Along the planes of hedding, commonly presenting dull black surfaces which soil the fingers. (2) Vertically across the strstification ; the broken surfaces are bright snd smooth, and do not soil the fingera; hright snd smooth, and do not soil the ingera;
the direction along which these joints run is the direction along which these joints run is
known as the "face" of the cual. (3) A third known as the "face" of the coas. (3) $A$ third
set of planes at right angles to both of the set of planes at right angles to both of the other sets, and less perfect, so that the fracture here is more irregular; this direction is called the "end" of the cosi. Thus it yields blocks more or less regular in shspe, and roughly resembling cubes or dies. (Huxley: Physiography, ch. xiv., p. 238, 3rd. ed.)
B. As adj. : Consisting of coal ; in any way pertaining or relsting to coal. (See the compounds.)
I Compounds of obvions signification : Coal-barge, coal-fire, coal-mine, coal-sack, coalshed.
coal-backer, s. A man employed to carry cosls from a ship to the wagons. (May-

* coal-basket, s. A hasket or scuttle
or carrying coals. for carrying coals.

## coal-basin, s

Geol. - A hasin-shaped depression with cosIbeds deposited in it. It has been slmost always produced by subsidence of the strata previous to the deposition of the cosl.

## ooal-bed, s.

Geol.: A bed of cosl.
coal-black, * oole-blacke, * coleblak, $a$

1. Ord. Lang. : As blsck as coal; jet-blsck.
" He hadde a bere's skin cole-black for ord.".
2. Bot. : Blsck s little verging mpon blue.
coal-boring blt, s, A bit with an entering point and a series of cutting edgee of stope of increasiug radius. (Knight.)

* coal-box, s. A box for carrying coals to the fire; a coal-scuttle.
coal-brand, a. A name for smut in wheat.

## coal-brass, $s$

Mining: A populsr nsme given to the irom pyrites found in the coal-measures, It contains no brass, bnt only sulphur and iron. [Iron Pyrites.]
conl-breaker, s. A mschine for crush ing lump-coal as taken from the miI.e. Also a building in which coal is broken, sorted and cleaned, usually situsted at the morih of a mine.
coal-breabing, 2. \& $a$. (See the compound term.)

## I Coal-breaking jack :

Mining: $\Delta$ jack or wooden wedge used for bresking down coal. Jscks are ingerted in a small recess in the seam, s few feet of tobint small recess in the seam, $s$ few feet of tobing
ara used to connect this with an adjacent ara used to connect this with an adjacent pamp, and great pressure being obtained by means of a lever, the
quinntities. (Knight.)

## coal-bunker, s.

Naut. : The closed room around the boller and engine-room of a steam vessel for keeping the fuel. (Knight.)
coal-car, s. A freight-car designed specially for coal ; s coal-truck or coal-wagon.
ooal-eart, s. A cart used In conveying coals.
coal-chute, s. A spont by which coal in bunkers or elevated boxes is loaded into carta or cars. (Knight.)

* ooal-crimp, s. A fictor or middleman who sefls slip-loads of coals on commission to wholesale dealers.
ooal-outting, s. \& a. (See the compound term.)
Coal-cutting machine: A mschine for undercutting coal seams in the mine or at ths bank.
coal-drop, s. A broad, shallow inclined trough, down which coals are discharged into the hold of a vessel. (Ogilvie.)
coal-dumping, s. The act of loading coal or other vessels from s cart. The cart is made to descend by a rail so as to enter the vessel, when it is of course easy to discharge its contents into the hold. (Kuight.)
coal-dust, s. Sraall fine coal, the siftings of coal.
 Trip in Hungury and Transylpanta, p. 192
coal-eyed, a. Black-eyed

## ooal-field, s.

1. Ord. Lang: A bed of coal.
2. Ord. Lang. \& Geol. $:$ A distriet where coal shounds, or which is worked for coal - a number of coal mines worked.
coal-fish, 8
Ichthy.: Gadus carbonarius, a native of the Baltic, Northern, and Mediterranean Seas. it is a coarse fish, deriviag its name from the dusky pigment which tinges the skin, and which soils the fingers like moist coals. (Buird.)
"The coazrish in most decidedly a northera gah, but being hardy speches is not wathoat a considerahl by Lord Mulgrave on the shoros of Spitalergen. This fish has more provincilit polnes than auy otiher

 cudden, sethe, sey, and grey-lord. In Rdiuburgb, and Newcantle the fry aro called coadsey (icoalzie), and
whent twelve inches long poodlers. -Yarrall: Britioh Fhishes
coal-fitter, s. A middlemsn who scts as agent in the sale of coal betwoen the owner of s pit snd the shipper.

## coal-formation, s.

1. Geol.: The same as the Carbonifemode formation (q.v.).

## 2. The same as the Coal-measurgs.

coal-gas, s. A mixture of gases prodnced by the deatructive distillation of coal at regulated temperatures. It ia used in lighting streets, houses, de., and for cookiag sid heating purposes Coal-gas is colourless, and has a dissoreeable smell. It is purified from $H . s$ by ferric hydrate, which is moistened with $\mathrm{FeSO}_{4}$ and $\mathrm{H}_{2} \mathrm{SO}_{4}$ to remove amened with $\mathrm{FeSO}_{4}$ and $\mathrm{H}_{\mathrm{g}} \mathrm{SO}_{\text {ph }}$ to remove sm-
monia. The carbon disulphide can be remonia. The carbon disulphide can be re-
moved by passing it through an iron tube moved by passing it through an iron tube flled with iron turniags and heated to redness. Coal-gas consists of a mixture of hydrogen, 40 to 50 per cent., carbon-monoxide about 5 per cent., marsh gas $\left(\mathrm{CH}_{4}\right)$ about 40 per cent., which contribute nothing to the illuminating power of the gas; it depends upon the presence of heavy hydro-carbons, principally $\mathrm{C}_{2} \mathrm{H}_{4}$ ethene, ordinary gas coataining about 4 per cent., and caonel gas taining about 4 per cent., and canam gas about 8 per ceat. Coal-gas slso contans small quantities of acetylene, butylene, se., and aromatic hydro-carbons, as bell zene, \&c. The perceatage of nitrogen is very variable, and the $\mathrm{CO}_{2}$ is nearly all re moved from gas made in England. When gas is burat a large quantity of water is formed, hence, if a gas stove is used to dry a room, there must be eufficient ventilation to carry off the aqueous vapour. The sulphur in coal-gas is converted into a alphuric acid when burnt, which greatly damages books, furaiture, \&c. The escape of coal-gas from pipes into the coil is very injurious to the roots of trees and shrobs. The admixture of s. very small quantity of air greatly impairs the illuminating power of coal-gas. Three causes are capable of decreasing the lumino. causes are capaole of decreasing the lumina eity of fiamee, Viz. : (1) withurawal of heat (2) dilution; and (3) oxidation of luminou material. (See FLAME, Watts: Dict. Chem. Brd Suppt., p. 787.)
coal-gum, s. The dust of coal. (Scotch.)
coal-head, s.
Ornith: : The Cole-tit, or Cole-titmouse, Parus ater; also called Coal-mouse (q.v.).
coal-heaver, s. A porter employed to carry coal, and especially to discharge it from ships.
"I went to the Jerushlem Coffee Honse ... I there suw iny captain, who looked as huch like a captain as Gurney.
coal-heugh, s. A coal-pit. (Scotch.)
t coal-hod, s. a ecuttle to hold coals. (Nuttall.)
coal-hole, s. A hole or cellar where coals and ciodera are ulaced.
"O... the types were fung loto tho coalhole, and xvi.
coal-hood, coally-hood, coal hoodle, 3.
Ornithology:

1. A name given to the Bullfinch, Pyrrhuld oulgaris, from his coal-black hool or cap
2. Tha Black-headed Buatiog, Emberiza schueniclus.
coal-house, \& A house in which coals are storel.
"Bonner's consclence made his pelace a coal-hou
coal-man, s. A collier.
coal-master, s. The propietor of a colliery ; a coal-owner.
coal-measure, s.
3. Ord. Lang. (Sing.): The measure used in scertaining the quantity of coal.
4. Geol. (Pl.): Strata of coal with the ottendent rocks. If the great Carboniferons fonnution be separatad futo three divisions, these, in the descending order, are (1) the Coalmeasures, (2) the Milistone-grit, and (3) the Mountain or Carboniferous Limeatone. If by the omission of the Millstone-grit they be reduced to two, then the Coal measures constitute, with the Mountain Limeatone slready stitute, With the Mountain Limeatone siready In the United States the Coal Measures attain In the United States the Coal Measures attain an unusual development, equalled nouthere
else in the wurld. The strata here are divided else in the wurld. The strata here are divided
iato two grouls. Oae of these, the Lower or Sub-Carboniferons, curregpends to the Carboai-
feroue limestene of England. The apper groups, comprixing the Carionaifenons proper,
inchuder the Dillstone-grit and the Coal Measures. According to Professor Dana, the conl-bearing area of North America is approximately as follows:

Rhode island area
Alleghany area 59,000
e, 700 Michigan area
Hituots Indiao 47.000 Hitoos, Iadiaoa, west Keatock Missoori, low.. Kaasa, Arkansas, Texas 78.000
18.000 Total, $\overline{209_{r} 200}$
Thla table doee not include the coal fields of the Rocky Mountaine and Pacific States, nor those of Yanconver Islaad, which would add considerably to the oum total. It ia worthy of note that Cos] Measures have been detected in the Arctic regious, in several localitles. The Coal Measures are largely developed io eevera] parts of Europe, In China, and elsewhere. They are large and rich in England, in comparison with the area of the island, and to the cosl produced from them is due much of the prosperity of that kingdom. The measures prosperity ot that kingdom. there comprise fresh water beds, includiog the Upper and the Middle Coal Measures, and Mpper and the Midade Beds, the Gannister Beds or Lower Coal Measures.
"Tho black ahales of tho conal-mearutres are here dis. tilled for variouk mlaersl oils and paraitn" "-Anse
coal-merchant, $\%$. Ooe who trades in coal.
coal-meter, $x_{0}$ An official appointed to measure coal
coal-miner, s. One who works in a coalmine; a collier.
coal-mining, $a$ \& $s$.
A. As adj.: Adspted for or occupied in mining.
B. As subst. : The set or process of mining for coals.
Mining: Coal-beds ueuslly lie at a slight slope, aod, when reached from the surface by shafts, are dug ont together with sufficient of the upper and under strata to allow of ver tical room for the miaer. At the foot of the pit long galleries (boards) are cut to the ex tent of the property, then cross galleries (narrows), narking out aquare spaces or dis tricta (panela). These are dug away, ond the coal pieked ont and removed; the oolid in tervals, gradually reduced to walls and pillars, are ultimately removed, wooden props sup porting the rool until it is allowed to fall in. This is called the "pillar and atail," or "board snd pillar," working, and was invented by Mr. Buddle in the beginning of this century. Formerly the conl was removed from the sides of intersecting galleries at the beginning of the mine, on the "rise end" of the ceam and great pillars were left behind comprising nearly sixty per ceat. of the cosl. Sompetimes the hewing is begun at the "rise end" of the "winning;" is a gailery all along the edge or face of the conl-seam, which is then cut graduace of the and the roof of the hollow behimi lly away, anort by atanes and timber for is partiy supportod bily silowed to fall in roadways, and partly nilowed to fall in. This is the "long-way," or "loog. wall," plan. The methods gnd terms vary in different coal-flelds. Ventilation is secured by a second 6Laft (engine-pit or upeast-pit), and by longitudinal divisions (brattices). making doutle currenta, In shafta and galleries; by stoppings nad trapdcors regulating the direction of the draught, and by other appliances. Mines are termed "fiery" when carburetted-hydrogen gas issues from the coal. This is frequently continuous ; sometimes, when reservoirs are opened, sadden, and then, il the miner has a naked light instead of a Davy or aafety lamp, the usual accidents take place.

## coal-mouse, colemouse, s.

Ornith.: A stnall species of titmouse, with black head : the Cole-tit (Parus ater)
coal-maphtha, s. An oily liqnid obtained by the distination of coal-tar. It is aold as benzole (q.v.). It is purtifed by agitating with caustic soda to extract the phenol and cresols; then rectified, by which It is separated into a heavy oil containing much naphthalene, and a liquid which is purifed by agitation with sulphuric acid and redistilled. By fractional distination it yields firat a mixture of benzene and carbon disul-
phide, and olefines, de., at $80^{\circ}$ chiefly benzeos
$\mathrm{C}_{6} \mathrm{H}_{6}$, about $113^{\circ}$ tolueas, at $142^{\circ}$ xylene, and at $170^{\circ}$ impure cumene.
conl-oil. s. The uaval name in this country for Pstancecm.

* coal-pann, * colo-panne, s. 4 brasier or yan for charcoal.
coal-passer. s. One whe passea on or supplies cal to the furnace of a atean-eugine.
coal-pipe, $s$.

1. The carbonized bark of a fossil plant.
2. Mining:
(1) The cylindrical cast of a tree formed of aolid aandstone, its inass in creasing gradually towards the base, and with no branches left to support it in its position. When cohesion of the external layer, which alone holds it np, is overcome by the force of gravity, the "coal-pipe" talls perpendicularly urobliquely, often crushing unhappy miaers at work below. (Lyell.)
 tha minersen "cont
1873 , ch. vi. p. 14 L .
(2) A very thin sean of coal.
coal-pit, .
3. A coal-inine: a pit suak lu the earth for the purpose of digging out coals. [Coal. MININo. 1
"A leat of the poljpody kind, found in the atnkinc
4. $A$ place where chsrenal is made. (American.) (Webster.)
coal-plants, s.pi.
Geol.: Plants, the remains gl which are found in the strata of the coal-formation, and from the stems, leaves, roots, de. of which from the stems, leaves, roots, de. of which
coal itseli has been produced. Brongnian coal itselt has been produced. Brongnian often in a stata of high preservation, exhibiting the most delicste nervurea of the lesves and cortical markings of the stems. (Craif, \&c.)

If Of the most common coal plant-nemains, Stigmaria was conjectured hy Prot. Brongniart and Sir William Logan to have a relation to Sigillaria, and Mr. Binney proved it to le the roots of that plant by finding the twoin actoad roots of that plant by finding the twoin actoa
continuity. (Q.J. Geol. Soc. 11. (1846). pt. ii., continuity. (Q. J. Geol. Soc. II. 1346). pt. No.s

Seotia, aiso saw a probable Sigillaria Eith Stigmaria roota. (Ibid., 393-6.) What Sigil laria itself is has been a matter of dispute Broagniart, Goppert, and Unger conaider it as prolably s cycad. SirJ. Dawsom, of Montreal, thinks that this may be ita affinity, or that it nay be a connecting liak betweea the Gymurn sperins and the higlier Aerogeas. ( $Q$. J. Geol. Soc., XV. (1859), pt. . ., p.76.) Mr. Carruthers F.R.S., dc., of the British Museum (Natura, F.R.S., ec., of the Briders it one of the LycoHistory), considers it one of the LJco-
podiacex, and consequently an Acrngen. He piaces Calamites uader the Equisetacere, and thinks that Asteropliylites, Anmmlaria, and Spheaophyllum are the leavee of three sjecies Akio to it is the genus Volkmannia. generally sgread that Lepidodendron shonld be placed under the Lycopodiacez. Among the plants of undisputed affinity are fertis of verious geaera: Suhenopteria, Pecopteriz, Nouropteris, Cyclopterts, \&e., but with the fructification as a rule destroyed. There are also genuine Conifers in the Coal-measure which prabably grew upon the hillis whilst the plants previously described had their habitat pants previously (carruthers: Lect. before the

Toynt Inctitution, on April 19, 1869. Q. J.
Grol Soc. XXV (1869), pt. i., pp. 248-253.)
coal-rake, "colo-raira ' colraike, a An iustrument used for raking out the ashes of a furnace.
coal-screen, \& a sifter for coal. (Knight.)
coal-souttie, s a box or utensil for holding cnals for present use.
Coal-scuttle bonnet: A bonnet oo called from ste resembling a onal-scuttle in shape.
"Olennofg fromp the deptha ut her coar-tcuatt bonnet
coal-shart, s. The shaft forming the ontrance to a coal-mine. [SHapt.]
coal-ship, s. A ehip employed in carrying eoal; a collier.
 hnt lein Ay at the rich merchanta "Juntusi Sin Exigm: p.
coal-slack, a. Dust or grime of coal ; tine coal.
coal-smut, s. The bame as Coalrslack (q.v.).

## coal-stalk, 8.

1. A name given to the vegetable Impressions ound on stones in coal-mlnes. (Scotch.)
"Those inpresslons ahoand in conl countrien; and

2. Extended, In Ita application, to the effects of recent vegetation.
coal-stone, s. Anthracite (q.v.)
"Coat-stone farmes esenly, and hurne treely; but
Woodward
coal-tar, s. Tar produced in the destructive distillation nf bituminous coal. It is a thick, sticky, dark-coloured aubstance, snd is used in the msnofacture of printer's jnk, for asphalt pavements, coating ships, \&c. The composition of coal-tar varies according to the ternpersture at which the coal is distilled, the higher the temperature the larger being the yield of solid bodies. Coal-tar when distilled first gives off gas, then water conaining ammonjacal salta, then a hrown light on which, when purified, is calied eoalnaphtha (q.v.); st higher temperatures yellow, hesvy, foetid oil called dead-oil (q.v.), or kreasota oil, then nsphthalene (q.v.) ; afterwards the black residne in the retort solidiffes on coollag and forms pitch, which is used to form asphalt, sad a black varnish to protect form asphalt, and a black varnish to protect tinued the pitch yields s yellow substance like bntter, containing antliracene, phenanthrene, luorene, sc. ; afterwards, at red best, s bright orange powder, consisting chiefly of pyreae $\mathrm{C}_{16} \mathrm{H}_{10}$ and chrysene $\mathrm{C}_{18} \mathrm{H}_{12}$; the residue forms s hard, porous coke.
Coal-tar colours: Dyes prepared from aniline ( $q . \mathrm{v}^{\prime}$ ), naphthslene, phenol (q.v.), and other compounds contained in cosl-tar.
coal-tit, s .
Ornith.: A species of titmonse (Parus ater), also called coal-head and coal-mouse ( $q . v$.).
coal-tongs, s.pl. A pair of tongs for grasping coal in lumps.
coal-trimmer, s. One who is employed to trin sud stow the coal for the fres of marine steam-engines.
coal-under-candlestick, s. A Christmas game mentioned in the "Declaration of Popish Impostures," 1603 . (Nares.)
coal-viewer, s. An overseer or superin tendent of a coal-mine.
coal-washer, 5. A machine in which cosl which hss beed broken and assorted is foslly waslied. (Knight.)
ooal-whipper, s. One who raises coal out of the hold of a ship.
"Here were colliers by the noore and *core with the
coal-whipping, s. The act or occupation of raising coals from the holds of ships.
coal-woriding, s. A place where coal is worked ; a coal-mine, a colliery.

oonl-worke, s. A colliery, with the neces sary machinery appertaining to it.
"There is a veat trensurs in the old Eagllab, trom
 and the mulves:-Felton
coal-yard, s. An enclosure set apart for the deposit cr sale of coal.
oōal, v.t. \& i. [COAL, z.]
A. Transilive:

- 1. Tu burn, char, or rednce to chercoal. "In fotching [the wood] when It is ocoated."-Careses

2. To supply with coal.
"A steam-versel to anid to be coaleat when the has received on board the nocessary fuel for any voy age."
-3. To write, mark, or delineata with charcoal.
"Marvilinng, he coaiod out rhlmes upon the wall, near to the plictars
B. Intrans.: To take in a supply of coals. which veaseolif ras has hetely been built, alongelae of

cōal'-ër-y̆, a [Eng. coal; ery.] a coalpit, a coal-mine : Dow superaeded by colliery (q.v.).
"Two fine italactito wore found hanving from a Woodward.
cö-a-lěs'g̣e, v.L \& t. [Lat coalesco $=$ to grow together, to conlesce, to units: co =con; alesco (incept. of alo) $=$ to nouribh.)
A. Intransilive:
I. Lit.: To grow together; to unite in masses or groups spontaneously.
"When rapoure aro raised, they hinder not the
trunsparency of the air, belng dirided into parts too trausparency of the air, being dirided into parts too smeil to exuse any reftection in their naperifies; but When they begin to coadeocn, and conatitute glohalea, some coloura. "-Newton
IL. Figuratively:
3. To combine, to joln, to agree.
"Mathematice nand phyatcs have beer tong accuaed., vol. vi., p 110.
4. To jolu a party, to become one of a party.
"He had langsined that, as soon as he chose to opposed, all his followera would hoiltate his oxampla, -Hacaulay: Hist. Eng., ch. xVi.
5. To unite In society in a more general sense ; to become incorporated with.
"The Jows were incapabio of coalescing with other

* B. Trans. : To cause to nnite or join.

I Crahb thos distingulshes between to add to join, to unite, and to coalesce: "We auld by putting a part to any body so as to form a whole; we join by sttaching two whole bodies to each other; we unite by putting two bodies to or iuto one snother, so that they lecome one body; things coalesce when their parts mingle together so as to form one substance. $\because \cdot$ Adding is opposed to subtracting or diminishiog; joining to separating, uniting to dividing, sud coalescing to falling ssunder." (Crabb: Eng. Synon.)
cō-a-lĕs'çed, pa. par. or a. [Conlesce, v.]
cō-a-1ăs'-çẹnçe, s. [Lat. conlescens, pr. par. of coalesco $=$ to coalesce, to unite.] The set or process of coalescing or conbining; union, concretion, combination.
" Like that of ssits with lemon Jolce,
A friendly ooalescence.
Coxper : Prlendahip
cō-a-1ĕs'-qen-sy̆, s. [Eng. coalescence; ;y.] The same as Coalescence (q.v.).

$\dagger$ cō-a-16s'-cent, a. \& s. [Lat. coalescens, pr. par. of coale, $\dot{c}=$ to coalesce, to unite.]
A. As adj.: Orowlng together, uniting, combining, coalescing.
"The human and divine natare of Christ being Orient. $1681, \mathrm{p}$ 159. ${ }^{2}$.
B. As stbst.: One who or thst which coalesces.
oō-a-lěs'-ging, pr. par., a., \&s, [Coalesce.]
A. \& B. As pr. par. \& particlp. adf.: (See the verb).
C. As oubst. : The act of combiulng or grow. ing together ; coalescence.

- cōal-z-ब̃r, cōall'I-Ẽr, s. [Collufin]
cöal'-这g, pr. par., a., \& \& [CoAi, v.]
A. \& B. As pr. par. a particip. adj. : (Bee the verb)
C. As substantive:

1. The act of supplying or providing with coals
2. The act of taking $\ln$ a supply of coals.
coalise, v.i. [Conlascre]

- cō'-al-ite, v.i. \& t. [Lat. coalitum, sup. of coalesco $=$ to coalesce, to unite.]
A. Intrans. : To unite, to coalesce.
"Let the frlends af liberty loy naside the groundiene
diatinctiona which are employed to ditinetiona which are employed to amuse and hitray On Partien, Let 19.
B. Trans. : To unita, to cause to coslesce. "Tlue han by degrees in all other placee and periods
blended and coallich the conquered with the cult-queroxi"-Burite : Yo Sir H. Langrishe.
cō-al-r'-tion, s. [Fr. coalition; Low Lat. coalitio, from coalitum, eup. of coalesco $=$ to coalesce, to unite.]

1. Ord. Lang.: A nnion or coalescing of separata bodies into one body or mass.

The world sa mnse of heterogeneopan consintemeles, and every gret thereof a coultion of distinguisuable
2. Polit.: A combinstion for temporary parposes of persons, parties, or states having different interests.
Ti The edininistration of the Duke of Portland, which commenced on April 2, 1783, and that of the Earl of Aberdeen, which began in December, 1852, were coalition Ministries.
must hove been that ove of athearition wet ween then must heve been that ove of them would have beec, yind
the tool of the other."-Afecaulay: Bivt. Eng, ch,

- cō-al-І'-tion-ẽr, s. [Eng. coalition; er.] The same as corlitionist ( $\mathrm{q} . \mathrm{v}$. ). (Byron.)
cö-al-i'-tion-ists, s. [Eng. coalition; -ist.] Ohe who promotes or joins a coalition.
$\dagger$ oōal'-1ĕss, a. [Eng. coal; -less.] Wanting or deatitute of coal.
- cō-al-lied', par par, or a. [Coally, v.]
* cō-al-lỳ', v.t. [Pref. $\omega=\infty=c n$, and Eng. ally, v. (q.v.).] To join or associste together.
"Buch elvll mociety cay never secretty or homorably
act with a total diseregard to that co-allied rellgion" Harburton : Ditine Leg.; Dodic
- cō-al-1 $\mathbf{y}^{\prime}, s$. [Pref. $\infty=$ con; ally, s. (q.v.)] An slly, a co-operator, an assistant.
oōal'-ăy, s. [Eng. cool, and Sc. sey = coalfish. (.famieson.)] The coal-fish (q.v.). in sume places the name is restricted to the fry.
cōal'-y̆, a. [Eng. coal; -y.]

1. Of or pertaining ts coal, of the nature of or resembling coal.
2. Full of or discoloured by coal ; blsck

Or rocky A von, or of sedgy Lee.
Or coaky Tyae, or aucltrit hallowed Dee."
cōam'-inggs, s. ph. [Сомеілая.]
Naul.: Certain raised work, rather higher than the decks, shout the cllges of the hatchopenings of a ship, to prevent the water on deck from running down. (Smyth.)
Tategraph, Jan. 1 an, liski.
"cō-ann-ne้x', v.t. [Pref. co=con, and Eng. annex (q.v.). To annex with or attach to something else

## * coap, s. [Copr.]

- coo-ap-pëar, vi. [Pref. $c o=c o n$, and Eng. appear (q.v.).] To appear at the same tinio with.
"Hesyens scornfal Asioes and thine can nevar cor
appear."-Quarles: Smblems.
cō-ăp-prĕ-hĕnd; v.t. [Pref. $\omega=\infty$, sud Eng. apprehend (q.v.).] To spprehend with auother, to comprehend.
"They assomed the shapes of animale common unto all eyob. and by their conjunetlous and eorapatitlona were able to communicate their oonceptiona anto any Bronone: Fulgar Errours, bl. v., p. 288 .
- oo-apt', v.t. [Lat. coapto = to fit.] To adapt, to make fit or suitahle.
cō-ap-tiction, a. [Lat. coaplatio, from coapto = to fit or join together; from co $=\infty$, and apto $=$ to adapt, to fit : apius = fit.]

1. Ord. Lang. : The adaptation or adjustment of parts to each other.
"The amme method makes both prove and verse beastiful which consliste in the jod
2. Anct. : A form of angular movement, in Fhich, as in the movement of the patella on the femur, the articnlar aurface of one bone travela over that of another so as to bring dif rerent parts of the surface successively into contact in the manner of wheel roling on the ground, this movement being usually ac companied by a cortain amount of gliding. (Quain.)
cō-ăp-tā'tõr, s. [Lat.]
Surgery: An apparatus for fitting together The enils of a fractured bone and holding thera in position while the bony jnnction is proceeding. (Knight.)
cō-arct', v.f. [Lat. coarcto; from $\infty=$ con, and $\alpha$ reto $=$ to draw or press close together from arclus = narrow, strait ; arceo $=$ to shut op, to enclose.]
3. To conflne, to enciose in a narrow compass; to contract, to restrain.
4. To constrain, to restrain, to confine.

- If a man conrects himself to the extromity of an oct, he must hiame ond impute it to himeell, that, he bas this
cō-arc'-tāte, v.l. [Coarctate, a.] The same as Coarct (q.v.)
"They ooarctate the breast, and antringe the belly" Tenner: Yin Recta ad Fitam Longom. p. 132.
cō-arc-t̄̄'te, * cö-arc-tā'tĕd, a. [Lat, corrctatus, pa par. of coarcto.] [Consct.
L. Ord Lang. : Pressed together; straitened, confined, shut in.
II. Technically:

1. Bot.: Contracted, drawn closely together.
2. Entom. : Compressed; greatly attenuated, especially at or towards the base.
Coarctate Metamorphosis :
Entom. : Such metamorphosis as occurs in the Diptera, in which the larva sheds its last akin hefora the growing legs and wings have akin hefore the growing legs and wings have
impressed their forms upon it, and the exnimpressed their forms upon it, and the exnlvium constitutes an ege-shaped harny case,
upon which there is not the least indication of upon which there is not the least indicat
the parts of the perfect insect. (Owen.)
cō-arc-t̄'-tion, s. [Lat. coarctatio, from coarcto $=$ to restrain, to confine : $c o=c o n$, and arctus = narrow, sirait ; arceo $=$ to restrain.] L Literally:
3. The act of confining, contracting, or resiraining within a narrow space.
4. The state or condition of being confined or restrained.
5. The act of confracting, straitening, or narrowing; that which contracts, straitena, or narrows.
II. Fig.: A restraint or resiriction of liberty.

- Election Ls opposed not anly to coaction, but also to
- cō-arc'-téd, pa. par. or a. [Солкст.]
$\mathbf{c o ̈}^{\prime}$-arc-türe, s. [From Lat. coarcto $=$ to press together.] The neck of a plant. (Treas of Bot.)
oöarse, " course, * cowrse, a. [Etymology doubtful. Prabably it is a contraction for in course $=$ in an ordiuary manner; henceordinary, common.] [Course.]

1. Literally:
2. Unrefined, impure, containing impurities or baser parts.

Of what coarme metal "I ye are montded.
Large in size or texture; composed of large or rough particles; not fine or soft.

- In eloth ti to be conuldered wool, the matter of Drapery. p. 6. (L6:su)
II. Figuratively:

1. Of persons:
(1) Rude, rough, nucivl, unpolished in manuers.

(2) Inexpert, inexperienced; uninstructed in art or learning.
 tram obliged to make vie of.-A $A$ rbuchnok
2. Of language, manners, \&c.: Gross, inele gant, rude, anpolished, unfinished.
$\therefore$ the giboin on Wuliam'e person and governmeal were decidody leas coarne and rancoroda daring the letter hali of his reign than duri
3. of things generally:
(1) Gross, rough, unrefined.

$$
\begin{aligned}
& \text { Tia not t to coarer tye of buman isw } \\
& \text { That binds their pesce. }
\end{aligned}
$$

(2) Mean, disagreeable ; not delicate.

II (1) Crabb thus distinguishes between coarse, rough, and rude: "These epithets are equally applied to what is not polished by art In the proper sense coarse refers to the cumposition and materials of bodiea, es coarse bread, coarse meat, coarme cloth; rough respects the surface of bodies, as rough wood and rough akin; rude raspecta the make or fashion of things, as a rude bark, a rude ntenail. Coarse is opposed to fine, rough to smooth, rude to poliahed. In the fgurative application they are distinguished in a similar manner: coarse language is used by persons of naturally coarse feeling; rough language by those whose tempera are naturally or occasionally rough; rude anguage by those who are ignorant of any better." (Crabb: Eng. Synon.)
(2) For the difference between coarse and gross, see Gnoss.

## coarse-grained, a.

1. Lit. : Having a coarse grain, as wood.

Bot. : A gemus of planta, onder Polemoniacea (Phloxworts) The species are fast-growing cllmbers, with tendrils. Cobasa scandens, the best known species, is from Mexiso. It grow here in conservatorles, or may be made to run op the front of a house with rough walls.

- corb-po-à-č-a, s. pl. [Mod. Lat cobwe (q.v.), and fem. pl. adj. вufl. -acere.]

Bot. : An order of plants fonndert by Don, bnt now merged in Polemoniacer.
cō'-bãlt, s. [Pr. cobalt; Ger. kobalt, kobolt, from Kobold, the dermon of the German mines; M. H. Ger. kotole = demon; Low Lat. coba, lus=a monntain eprite; Gr. *ósialos (kobalos) $=$ miechlevous gollin. A name given to the ore by the miners from its being so pironous and troublesome to them. It is found in a msarcasite frequent in Saxony.]

1. Chem.: A metallic element, atomic weight 69, aymbol Co. The metal was first olitsined in so Impure state by Brandt. In 1733 . It oceure as spelas cohalt, or thowhite colsalt $\mathrm{COAs}_{2}$, and cobalt-glance COA6S. Cobalt occurs in meteoric iron. The ore is tirst roasted to expel the arsenic, then dissolved in equa regia, the excess of acid evnporsted off: $\mathrm{H}_{2} \mathrm{~S}$ is then passed through tha bolution to precipitste copper, bismuth, and the remainder of the arsenle; the filtered uquid is boiled to expel the excess of $\mathrm{H}_{2} \mathrm{~S}$, boiled with $\mathrm{HNO}_{3}$ to convert the iron into a ferric salt; it is then cupersaturated with ammonla, which preciphtstes the iron as $\mathrm{Fe}_{2}\left(\mathrm{HO}_{8}\right.$, and the cobalt and
 nickel remain in uolition. Cobalt can we
separsted from nickel hy Rose'a prucess. The separsted from nickel by Rose'p prucess. The
solution of the inixed oxides is dissolved la 11 Cl : the solution is dunted with unuch water, and supersaturated with chlorine gas, which converts the cobaltous chloride CoCl ${ }_{2}$ Inte cobaltic chloride $\mathrm{Co}_{2} \mathrm{Cl}_{\text {e }}$ while the nickel in unaltered; excess of barium carbooate $\mathrm{BaCO}_{3}$ is then added, and left to stand for eightee hours, when the cobaitic oxide ia prectpitated: the nickel remains in solution. The precipitate to dissolved in boiling HCl , a ad Nasin is added to precipitata the barium as BaSo ${ }^{\text {a }}$, and the cobalt is then precipltated as $\mathrm{Co}(\mathrm{HO})_{2}$ by caustic soda. The metal is obtained by heating cobaltous oxalate in a covered crucible Metallic cobalt is a hard, magnetic, ductie, Metalice cubalt is a hard, magnetic, reddish-grey metal, with a high meitiug point
lits ap. gr. Is 8.9 . It is not easily oxddised by the air. when pure. It in dissolved by dilute the air, when pure. It it dissol ved by diluta Cobalt forms two oxides: Cobaltous oxide CuO end Cobaltic oxide $\mathrm{Co}_{2} \mathrm{O}_{3}$ ( $\mathrm{q} . \mathrm{v}$.). The alloys of cobalt aremnimportant. Zaffre is no mupure oxide of cobalt prepared by rousting cobalt ores with twice their waight of sand. Susilt is prepared by fuaing partially roasted cobalt orea with a mixture of powdered quartz and potassinm carbonate ; while hot it is ioured Ints water and then gronnd to a fine powder ; it is used as a pigment ; thin colour wus known to the anclents. The cobaltous salts are the toost stable in which cobalt acts as a dyad element. Cobelt compound givea blue colour to a borax bead.
2. Min.: There ts no native cobalt known, but many orea of the metal. Arsenate or Arseniate of Cobalt $=$ Erythrite $;$ Arsentical Cobult $=$ Smaltite: Black Cobult $=$ Asbolite: Bripht-white cobalt $=$ Cobalt-glance: Carbomate of Cobalt $=$ Remingtonite ; Earthy Cobalt $=$ Asbolite; Grey Cobalt = Smaitite: Red Coball $=$ Erythrite ; Uulphate of Cobalt = Bteberite Sul, huret of Coball $=$ Syeporite, Linurite White Cobalt $\equiv$ Smaltite; Cobalf ond Lead Selenite $=$ Tilkerodite.

## I Cobalt-Ammonia compounds ; Cobalt Buses:

 Chemistry:(1) Ammonta cobaltous salts are formed by tha union of cobaltoua aalts with smmonia in excess, the air being excladed, $2 s, \mathrm{CoCl}_{8}{ }_{6} \mathrm{NH}_{3}$, rose-coleured crystals.
(2) Ammonia cobaltio salts are formed when an ammoniacal solation of cobalt is exposed to the air, as - Tetrammonio-cobaltic salts, as $\mathrm{Co}_{2} \mathrm{Cl}_{6}{ }^{\circ} \mathrm{NH}_{3}$. Haxammonlo-cobsitic salts, as $\mathrm{CO}_{2} \mathrm{Cl}_{8} \cdot{ }_{6} \mathrm{NH}_{3}$. $\quad$ Oxy-octammonis - cohnaltic (fusco-cobaltic) saits, $8 \mathrm{~B} \mathrm{Co}_{2} \mathrm{OCl}_{4} \cdot 8 \mathrm{NH}_{3}$. Decammoniso-cobaltic (roseo- and purpureocobaltic) saits, as $\mathrm{Co}_{2} \mathrm{Cl}_{6} \cdot 10 \mathrm{NH}$. Dinitro-decaminonio-cobaitio (xantho-cobaltie) salta, $\mathrm{Co}\left(\mathrm{NO}_{2}\right)_{2} \mathrm{Cl}_{4} \cdot 10 \mathrm{NH}_{3}$. Dodecammonio-cobaitic (Inteo-cobaltic) salts, $\mathrm{Co}_{2} \mathrm{Cl}_{6} \cdot 12 \mathrm{NH}_{3}$. (For preparation and propertiea of these compoands see Wattr's Dict. Chem., and Suppts.)

## oobalt arsenate, s.

Min. : The same as Erythane.

## cobalt arrenide, 8.

Min.: The same aa Smaltite. (Brit, Mus. Cat.)
oobalt-bleom, \&.
Min.: Acicular arsenate of copper. The same as Erythrine (Brit. Mus. Cat.), or Erythrite (Dana).
cobalt-blue, so Alao called Cobalrultramarine. a fine blue pigment prepered by adding an alkaline carbonate to a peired by of pure alum mixed with pure cobalt sointion of pure alum mixed with pure cobalt
salt. The precipitats ia washed and ignited. It is s componod of oxides of aluminium and It is s componod of oxides of aluminlum and
cobalt. Thenard's blue is prepared by heating cobalt. Thenard's blue is prepared by heating phate of cobalt, with five times ita bulk of gelatinous aluminium bydrate $\mathrm{Al}_{2}(\mathrm{HO})_{\mathrm{A}}$, and beating the mixed precipitates in a closed vessel. The presence of iron or nickel givea these pigments a greeniah tint.
cobalt-orust, s. Earthy arsenate of onper.

## cobalt-glance, s.

Min.: An isometric brittle mineral, with cubic cleavage, occurring also massive. The hardneas is $5 \cdot 5$, the sp. gr. $6-6 \cdot 3$; the lustre is metallic ; the colour silver-white, inclining to red, ateel-grey with a violet tinge, or greyish-black, the atreak being of the lastnamed bue. Compos. : Sulphur, 19.08 to 20.86 ; grsente, $42 \cdot 53-44 \cdot 75$; cohalt, 8.67 $89 \cdot 10$; and iron, $1 \cdot 63-24 \cdot 99$. Dana makes two varietiea, (1) the ordinary, and (2) ferriferous. [Ferrocobaltite.] It is found in Cornwall, in Sweden, Norway, \&o. In the Britiah Museum Catalogue cobalt-glance figures as the accepted name of the mineral described by Dana ss Cobaltite. (Brit. Mus, Cot. of Mir.; nleo Dana: Min.)
oobalt-green, s. A permanent green pipment prepared by precipitating a mixture of sulphates of cobalt and zinc, by carbonat of sodium, washing and igniting the precipl. tate. Also called Rimman'a green.
cobalt-hygrometer, s. A hygrometer, made by dipping unsized paper into a aolution of cobaltous chloride, sodium chloride, and a of cobaltous chloride, sodium chioride, and a scopic, and will absorb the moisture from the atinosphere. It changes colour as follows :-Rose-red indicatea rain; pink, very damp; bluish pink, moiat; lsvender, slightly damp ; violet, dry; blue, very dry. It may also be used to test, whether a room, \&c., is dsmp. Artificial flowers are often dipped in this solution.

## cobalt-manganese, s.

IT Cobalt-manganese spar:
Min. : The same as Rhochroaite (q.v.).
cobalt-nickel, s.

- Cobalt-nickel pyrites:

Min. : The same as Linneite.
cobalt-cohre, s.
Min.: The red variety is the same as Ervtarite; the black one aa asbolite, the watter a variety of wad. (Dana.) Tha same ss WaO. (Brit. Mus. Cat.) $^{\text {a }}$
cobalt-pyrites, в.
Min.: The same as Linnnerte.

## cobait enlphate, s.

Min.: The sama as Bieserite.

## cobalt eniphide, $s$.

Min. : The same as Cosalt-alange (q.v.).
cobalt-ultramarine, s. [See Совaltbude.]
cobalt-vitriol, s.
Min. : The same as Biererite.
cobalt-yellow, \& A besutiful permanent yeliow pigment prepared by gradually adding a concentrated solution of potassinm nitrite $\mathrm{K} \mathrm{NO}_{2}$ to an acid aolution of cobalt nitrate. lits compoaltion varies.
cō-bãl'-tic, a. [From Eng., \&ce cobalt ; -ic.] Having more or leas of cobalt in lts composition; pertalning to cobalt.

## cobaltio oxide, s.

Chem.: Cobaltic oxide, or besquitaxide of cobsit, $\mathrm{Co}_{2} \mathrm{O}_{3}$, is obtsined ss a black hydrate $\mathrm{Co}_{2}(\mathrm{OH})_{s}$ by auapending cobaltous oxida in a aolution of potasaium hydrate aod passing a atream of chlorine gas through the liquid. It is rendered anhydroua by a gentle heat. At higher temperaturea it ta converted into a black oxide $\mathrm{Co}_{3} \mathrm{O}_{4}$, which is insoluble in aqua regia. It is used sa s pigment in cnamel painting.

## cobaltic salts, s. pl.

Chem. : Cobaltic salts are prepared by disaolving cobaltic oxide in acids. They are not important, and easily decompose. Cobait acta as a tetrad in these componnds, the two atoms of Co being united to each other by one pair of bonds.
ō̄-bãlt-1-¢y'-an-ide, s. [Eng., \&c. cobalt; $-i$ connectlvé; and cyanide.] [Cosaltjcyanooen.]
Chem.: Cobalticyanide of potasaium $\mathrm{K}_{6} \mathrm{Co}_{2}(\mathrm{CN})_{12}$ is obtained by dissolving cobaltous cyanide $\mathrm{Co}(\mathrm{CN})_{2}$ in exceas of potassiuin cyanide KCN and boiling it for aome time. Colalticyanide of potassium cryatsllises in anhydious flattened yellow prisms, which are solible in water; it is not decomposed by dilute acids. It givea precipitates with moat metsllic salts. Cobalticyanide of cobalt is might red ; of nickel a light green-blue ; copper light red; of nerkel a hght green-blue; copper aky-bine; ferroua, mercurous, manganous,
gilver, zinc, and atannous, white. Cobaltigilver, zinc, and atannous, white. Cobalti-
cyanides of lead, ferric and mercuric, are cyanides of lead, ferric and mercuric, are
soluble in water. Cobalticyanide of hydrogen, or hydrocobaltic acid $\mathrm{H}_{8} \mathrm{Co}_{2}\left(\mathrm{CN}_{12}\right.$, is obtained by decompoaing the copper salt by $\mathrm{H}_{2} \mathrm{~S}$. It crystsillises in colourless deliqneacent needies ; ita aqueous aolution is not decomposed by boiling. No corresponding nickel compound has been formed, thic double cyanide of aickel and potsssium being decomposed by HCl .
 brlt;-i connective; and cyanogen.] A radical contained in cobalticyanides.
co'-bâlt-ine, s. [Eng. cobalt; -ine (Min.).] The same as Cobalt-Glance (q.v.).
$0^{\prime \prime}$-bãl-tite, s. [Eng. sc. cobalt, and suff. -ite (Min.) (q.v.).]
Min.: Dana's name for a mineral, the same as Cobalt-olance (q.v.) ; aee albo Cobaltine.
cō'bãl-tó, in compos. [Eng. \&c. coball, and $o$ coonective. 1
cobalto-cyanide, s. [Cobalto-cyanide of Potassivm.
Cohalto-cyanide of potassium
Chem.: $\mathrm{K}_{4} \mathrm{Co}^{\prime \prime} \mathrm{CN}_{8}$, a red, deliquescent, easily decomposed substance. it can be formed by the reduction of cobaltic cyanide of potassium. (See Watts: Dict. Chem.)
cobalto-cyanogen, s. A radical contained in cobalto-cyanides.
oō'-bãl-tolus, a. [Eng. cobalt ${ }_{1}$ and anff. ous.] [Cobalt.]

Chem. : Belonging to cobalt.
cobaltous chloride, s.
Chem.: CoCl2. Obtsined aa a blua snhydroua volatile substance by passing chlorine over metallic cobalt, also in solution by disaolving cobaltoua oxide CoO in HCl ; its solution ia pink, but whan concentrated it turns blue. it la used as a sympathetic ink, the writing becoming blue on the paper being
exposed to heat, and fading away ou absorbiag moisture from the alr.
cobaltous nitrate, s.
Chem. : $\mathrm{CO}\left(\mathrm{NO}_{3}\right)_{2}: \mathrm{SH}_{2} \mathrm{O}$. Prepared by dissolving CoO in nitric acid ; a red cryatalline daliqueacent salt, nsed in blowplpe reactions.

## cobaltous oxide, s.

Chem.: COO , obtsined by igniting the hydrate $\mathrm{Co}\left(\mathrm{OH}^{( }\right)_{2}$, or the oarkonste $\mathrm{COCO}_{3}$. out of contact with the air. It is a greeniahgrey powder wbich, when heated in tha alr, takea up oxygen and ta converted into a black mixed oxide $\mathrm{Co}_{3} \mathrm{O}_{4}$ which at a atronger heat givea off oxygen. It is osed in preparing blue pigments for china painting.
cobaltous salts, s. pl.
Chem. : Cobaltous salts are precipitated hy sulphide of smmonium aa $\operatorname{CoS}$ (see analysis), and can be separated from other aulphidea of this gronp, except nickel sulphide, by the inaolubility of cos in dilute HCl . Potash pre. aoluitantes a blue basic salt, which turna green cipitstes a blue basic salt, which turna green on expoaure to the air; on beating the prech pitsts it is converted into the red hydrate $\mathrm{CO}(\mathrm{HO})_{2}$, which is insoluble in excess of RHO, but aoluble in ammonia, forming a red brown aolution. Small quantitica of cobalt salts can be detected by adding cyanide of potsasium in excesa, then nitrits of potsasium, and after warda aciditying with acetic scid, an intense red cherry juice colonred liquid is formed. Cobelt salts give a bloe colour to a borax bead.

## cobaltons sulphate, $s$.

Chem. : $\mathrm{CoSo}_{4} 7 \mathrm{H}_{2} \mathrm{O}$. Cobalt vitrinl, ob tained by dissolving CoO in $\mathrm{H}_{2} \mathrm{SO}_{4}$. It eryatallises in red rbombic priam 180 morphona with magneaium sulphate. It forms double salts.

* cobbe, a \& v. [Cos, s. \& v.]
črbbed, pa. par. \& a. [Cos, v.]
oobbed ore, 8
Curnish Mining : Ore hroken with aledgehammers out of the rock, and not put in water, it being the best ore. (Weale.)
colb'-bẽr, s. [Eng. cob; er.] A bruiser of tin. (Cornish.)
* oŏb'-bĭng, pr. par., a., \& s. [Сов, v.]
A. As present participle: (See the verb).
B. As adj.: Holdiog up the head abovo others, proud, conceited.

Amongat thoee notailite, famons, noturfous, cobsing C. As substantive:
. Ord. Lang.: The act of beating in the manner described under the verb; the beating thus given.
2. Mining: The act of breaking up ore tosort out its bétter portions.
cŏb'-ble (1), s. [Eng. cob (q.v.), and dimin. suff. -le.]
I. Ordinary Language:

1. A small round atone or pebble; a boulder, used for paving streets, court-yarda, \&c.; a piece or lump of coal.
"Their handa shook sworde, their slinge held cobsbled
ound" Fatrfax: Tasso. Xx. 29. round-Fairfax: Tasso. XX. 29.
2. An apparatus for the amusement of clinidren : a beain being placed across a wall, with the ends equally projectiog, so that thoos who are placed at each end may rise and fall alternately; a aee-saw or titter-totter.
3. The smusement itself.
II. Technically:
I. Metal. : An imperfectly pudaled ball which goes to pleces in the aqueezer.
4. Coal trade: Small round coal.
"Derby. ${ }^{27 \mathrm{~s}, ~ ; ~ c a b b l e s, ~ 19 \% ~ D e l i v e r e d . ~ . ~ . "-T i m e s, ~}$ Nov. 11, 1875. Advt.
cobble-stone, * cobylstone, cobyll stone, * cobbylstone, \&
5. Rounded stones.
6. The stone or kernel of fuit.

Cobyltotone or cheryatone. Petrilla."-Promph
aro.
cobble-tree, 8. Tha aplinter-bar or wingie-tree of a plough.
 ceubal $=$ a ferry-boat, s skiff; couo $=$ to excavate, to hollow out; boats beling originally cavate, to hollow out; boats being originally made of hollowed trees. (Skeat.)] A low, flat-
floored boat with a aquare stero, used in the floored boat with a gquare stero, used in the
cod and turbot fiahery, twenty feet long and

Ive feet broad, of about one ton burden, rowed with three pairs of oars, and furnished with a lug-sail. It is admirahly constructed for encountering s heavy swell. 1ts stability is eecured by the rudder extending four or fivs

cobble.
feet ander her bottom. It belonged originally to the atormy coast of Yorkahire. Thare is also a smail boat under the sanis name used by saimon fishera. (Smyth.)
${ }^{-1}$ He has suiled the coble wi' me ninee he was ted
©かb'-ble (3), s. [Etymology doublful.)
Ornith: A local nsme for the Red-throated Diver, Colymbus septentrionalis.
cobb-ble (1), cob-bill, v.t. \& i. [O. Fr. cobler, coubler = to couple, to join together Lst copulo $=$ to couple; Ger, koppeln; Dan kobble.]
A. Transitive :

1. Lit.: To patch or mend clamsily, to botch. Generally used of shoea
"II you bo out, 8ir, I can mend you-Why, Sir.
2. Fig.: To put anything together, or do anytbing clumsily nr awkwardly; to botch.
"Believe not that the whole universe is mere hang. ing and bundering nothin: effected tor auy purpoee مgether. - Bentley.
B. Intrans. : To act as a cobbler; to mend, patch, or botch (itit. \& fig.).
"Leaves his sang shop, forsakes hin store of shoes,
Crispin quits nod cobbles for the muke"
Byron: Ergtith Bards and scotch Reviewert.
† cób'-ble (2), v.t. [Cobrle (1), s.]
3. To pave with cobble-stones.
4. To shake or move as a stone when trodden on.
5. To play at the game of cobble ( $\mathrm{q} . \mathrm{v}$.).
eđb'-bled (1), pur. par. or a. [Cobble (1), v.] 1. Lit.: Mended or patched.
6. Fig.: Clumsily or awkwardly pat together; botched.

Refect the nauseous praikes of the times;
Dryden

* őbb'-1ed (2), "abb'-Ied, a. [Cobble (1), a] Rounded like s pebble.

> Gir Torrent gulerid good cobled atonys, Girnt and handsom Tor the nonys, That good and round were Torrene of Portugal, 1 soo.
eơbb'-lẽr, "cobbe-Ier, ${ }^{*}$ cobe-ler, ${ }^{*}$ cobelere, * oob-ler, s. [Eng. cobble (I), v. ; er.
A. Ordinary Language:

L Literally:

1. A mender or patcher of shoes.
"Clowter or cobelere. Sartorius, robroocator."Promes. Pase.

Smith, cobbler, loiper, he that plies the shearn
All hearned and all arunk. cowper: Task, iv. $47 \%$.
2. A mender or patcher generally; s clamsy Torkman.
"What trade aro yoa - Traly, sif, in respect of * ane workman I am hot, as yoo would kay, a cobbler." Shateop: Julius Casar, i 1

## II. Figuratively

1. A low-born, mesn person.

As if what wa eatcem in cobbters base Dryden: Jufenars satires.
2. A drink mach in uss in the United States. It is compounded of wine, sngar, lemon, end ice, and ia sucked up through a straw. Sherrv-cobbler.]
B. Technioally:

1. Naut.: An armourera rasp.
2. Metal.: A puddler who has produced ax insufficiently puddled ball of iron.
3. Weapon-making: A bent rasp for straightening the shaft of s marod.
cobbler's-awl duck, s. A local asme for the a yocet (q.v.).
cơb'-blẽr-y̆, s. [Eng. cobbler; -y.] The trade or work of a cobllier. (Sir J. Lubbock in Pop. Sci. Monthly. xxx. 331.)
cöbb'-ling, pr. par., a, \& s. [Cobrle (1), v.] A. As pr. par. : (See the verb).
$\dagger$ B. As adj.: Cohbler-like, awkward, clumsy.
"Such cobbling verrean no poetaster before ever
C. As subst.: The art or trade of a cobbler.

- Many underlayers, when they euld not live npon tuxims. - Sir $\kappa$. Li Estrange.
$\mathbf{c o c b}$-b̆y, $a$. [Eng. cob; -y.]

1. Like a cob.

* 2. Stout, hearty; lively. (Webster.)
* 3. Headstrong, obstinate. (Webster.)
corb'cōals,s. [Eng cob, and coal.] Round, clear coal, also called cobbles (q.v.).
* cobeler, " cobelere, \&. [Conbler.]
$\dagger$ cō-bĕl-líg ẽr-ent, a. \& s. [Pref. co= com, end belligerent (q.v.).]
A. As adj.: Wrging war in conjunction or alliance with another.
B. As subst.: Ons who joins another in waging war.
cób'-iron (iron as i-ürn), s. [Eng. cob, and iron.] An andiron with a knob at the end.
"The impierneats of the kitchen, as syita, ragen
cobtrons, and yota. -bacon: fhysicar hemains.
cō-bissh'- $\mathbf{o p}, s$. [Pref. $c o=c o n$, and bishop (q.v.).] Aa assistant or coadjutor bishop. "Valerius, advanced in yerm, and a Grecian by made use of Austin as a poosdohop, for the benffit of the church of Hippo." $-4 y^{\prime}$ iffo.
co-bi'-tis, s. [Gr. кwßirts (hobitis), fem. = gudgeon-like.]

Ichthy.: A genus of îshes, family Cyprinidx. It contains the Loaches. Cobitit barbatula is the Loach, Loche, or Beardje, common in streams in England. C. tenia is the Spined Loach or Groundling. It is much less common. [Loach.]

* cŏb'-le (1), v.t. [Corale (1), t.]
cŏb'-le (2), v.t. [CoRle, s. 2.] To steep malt.
"Crais, p. 188 calls aquam, et ignem pati,- that in
killing and cobleing."-Fountainhould: Decin., i, 25.
cớb'-le (1), s. [Cobrle (2), a]
cơb'-Ie (2), s. [CoBle (2), v.t.] A place for ateeping malt.
cǒb'-Ie (3), s. [Etym. doubtful.] A square seat, sometimes called a table seat, in a church (Scotch.)
"cǒb'-lẽr. s. [Congler.]
"cơb'-lingg, pr. par., a., \& s. [Cobrliwo.]
cŏb'-10̄af, s. [Eng. cob, and loaf.]

1. Lit.: A word of doubtful meaning, but probably a largs coarse loaf, or a loaf with many knobs.

> 2. Fig.: A caarse, rough, loutish fellow.
> - Ajax. Coblout
> Ther Ho breaks a pus thee into abivera with his fish
b-nŭt \& [Bg ins and Creerida, iL A. I. (6).]

1. Ord. Lang.: A variety of the cultivated Ilazel, Corylus Avellana, var. grendis. A llazel-m nut or Master-mut.

- Jamaica Cobnut: The same given in Jsmaica to the sceds of Omphalea iriandra. It is called also Hog-nut. It requires the embryo to be extricated, otherwise it is tou cathartic for food. When this is done, then, according to Mr. W. Macleay, it is delicious and wholesome.
* 2. Games: A game which consisted in throwing with a nut called a "col " at a sunall pyramid of cohnuts, the thrower taking all wich he might knock down.
"Chateiles. The childiath garme cobnul. or (rather) the throwing of a ball at a heape of outh which doue the
thrower taked am many ha he hath hit or scattered. Cotgrave
cob-oi-schoun, cob-o-schonn, cab-o8choun, a. [САвосноя.]
-0't-boũrg, s. [COBURG.]
cobourg cloth, $s$. The ssme as Costra (q.v.).
cö'-bra, cō'b-ra cap-è'-la, cō'b-ra ca-
 dî ca-pěl'-1ó,s. [Port, cobra di capello $=$ the Snaks of the Hood, i.e., the Hooded Snake. Capella is wrong, that word in Portu guess meaning a chapel and not a hood.
Zool. : A species of snaks, the Coluber Naja of Linnæus, now called Naja or Naia tripudians. It belongs to the family Viperidæ. The head has nine plates behind sad is broad, the neck is very expransile, covering the hear like a hood, the tail round. The colour is brown sbove and bluish-white beacath. When the disc is dilated the hinder part of it exhibits dark roarkings like a pair of apectacles reversed, or rather s pair of barnacles,

cobra.
whence it is sometimes called the Spectacie Snake. The common aeme is, however, the Portuguese one, Cobra, Cobra capella,Cobra ds or di capello, bortowed from our predecessors in Iadis. The Hladoos call it Nag, a word which occurs in Nagpore, s eity formerly the capital of the Bhonsla dynasty of Mahrattas in Central India. It is from two to four or even six feet long, is commos in India, and is so venomous that it causes the death of more people than does the tiger. Notwithstanding this, it is kept in various temples, fod with milk and sugar, snd wor shipped. Many cobras are killed and eatem by a amall mammal, one of tie Viverridse Herpestis griseus, called in India the Mungoos

## cobra-monil,

Zool. : Daboia mussellii, from the East Iadies Called elso Russell's Viper. [Ticpolonoa.]

## cobra poison, s.

Chem. : The poison of the Cobra de Capello (Naja tripuitians) may be obtained by pressiag the parotid glands of the anake while tis fangs are erected. It has been examined by A. Pedier and by A. W. Blyth. It is an ambercoloured, syrupy frothy liquid. Sp. gr. 1.046. it has a feeble acid reaction. The cobra poison containa albumen, a minute trace of poison containa albumen, a minute trace of fat, and a crystalline body called Cobric acid
(q.v.). It dries up, on exposure to the sir, to a yeliow acrid pungent powder.

Comim. : A superior kind of indigo, prepared in Sonth America.
©ō'-bric, a. [Eng. cobr(a); -ic.] Pertaiaing to, or derived from, the cobra

## cobric acid.

Chem.: An acid obtained by dissolving the yellow powder [COBRA poison] in water and coagulating the albumen by alcohol, filtering, the alcohol evaporated off at a gentle heat. the liquid concentrated to a small bulk and precipitated by basic acctate of lead; the precipitated is washed, and decomposed by $\mathrm{precipitate}_{2}$, filtering off the lesd aulphide, and eva porating. Cobric acid cryatallises in needies, which ars desdly poisonous ; it forms abou 10 per cent. of the anske poison. It forme a platinum salt, haviag the composition $\left(\mathrm{C}_{17} 11_{25} \mathrm{~N}_{4} \mathrm{O}_{7} \cdot \mathrm{HCl}_{2}\right)_{2} \mathrm{PtCl}_{4}$ - The platinumssit is much leas poisonous. The addition of potassium permanganate ja said to destroy the phytiological activity of ths poison.
co'-bri-form, a. [Eng. cobra, and form.] Resembling or connected with the cobra having the poison-fangs grooved.
cób'-stōne, s. [Eng. cob, and stone.] A rounded stona, a cohhle or cobble-stone.
fíte, făt, färe, amidst, whãt, fâll, father; wē, wơt, hëre, camel, hẽr, thêre; pine, pǐt, sīre, sīr, marine; gō, pơt

-chbr-swann, \& [Eng. cob, and soan.] The bead or leading swan; s male ewan.

With a cobproan, or a highom not taken

Coj'bũrg, oō-boũrg, \& [From Coburg, in
Fabric: A thin material of worsted and cotton, or worated sad ailk, twilled on one side, for ladiea' dressea ; intended as a aubstitute for merino. (Ogilvic.)

co'-ca, s. [Sp.]
Bot. \& Pharm. : The dried leaf of RrythroxyLon Coon, a shrub, 4-8 feet high, growing Andes between and cuitivated there on the Andes, between 2,000 and 5,00 feet high. It those who uae it to a greater extent, it is said, than opium in China or atrong ifquor here. It is oped chiefly by the Peruvian miners, who chew its leaves mixed with the ashea of Chenochew its leaves mixed with the ashea of Chero-
podium quinoa. It is said to give them great podium quinoa. It ia said to give them great
power of eaduring fatigue on a acanty aupply of food; thirty mililon ponnda of the dried leavea are consumed annually. The leava eontain an alkaloid Cocaine (q.v.), a varrety of tannic acid, and s waxy aubstance called Cocswar $\mathrm{C}_{33} \mathrm{H}_{66} \mathrm{O}_{2}$, which melts at $79^{\circ}$.

Cбo-ägié (g ailent), s. [Cockaynf.]
©o'-ap-ine, s. [Sp. coca; snd auff. -ins.] Chem.: An alkalold, $\mathrm{C}_{17} \mathrm{H}_{21} \mathrm{NO}_{4}$, extracted from the leavea of the coca plant by alcohol acidifled with a amall quantity of suiphoric acid. Cocaine, which is odourless, and has a bitter taste, cryatalliaes in white monoclinic prisms, which melt at $92^{\prime \prime}$, and are very soluble in ether, but only aparingly ao in water. It is extensively used as a local snesthetic in minor operationa, especially, of the eye.

1. The habit of paing cocaine as a stimuiant.
2. The morbid condition induced by auch habit.
0 0 -ca-in-İ-zä'-tion, 2 [Eng. cocainiz(e); -ation. The act or process of subjecting to the influence of cocalne.
cōf-can-in-ize, v.t. [Eng. cocain(e); -ize] 1. To anesthetize by means of cocaine. 2. To suhbect to tha influence of cocalne: to impregnate with cocaine.
co-call-lêr'-g, s. [Brazilian.]
Pharm.: One of the names for a decoction of Croton perdicipes, used in Brazil as a cure for syphilía, and as a diuretic.
 kernel.]

Eniom: A large cocoon of a weak character. (Ogilvie.)
 TRICE.]
coo-qül'-an\%, 8. pt. [Named from Jchn Cocceius, or Coeken, who was born at Bremen, on Atguat 9, 1603, sind died, Professor of Divinity at Leyden, in 1665.]

Ch. Fist: The followers of John Cocceins [etym.] He belleved that the whole Oid Testament bistory mirrored forth the hiatory of our Saviour and of His Church. It was said that Cocceius finda Christ everywhere sud Grotius nowhers in the Oid Testament. The atatement sbont Coccelas was correct: that regarding Grotina was not so. The followers of Cocceina were for a conslderable lowers of Cocceina were for a considerable Ch. Hist., Cent. XVII., de.)
ơé-ǧi-dse, a pl. [From Lat. cocoum; Gr. коккоs (kokkos) $=\mathrm{s}$. kernel, the cochineal berry, te insect, and ferm. pi. adj. suff. -idee.]

Entom.: A family of Homopterous inaects, called by Latreille Qallinsecta, Le, Gall Insects. They have apparently but one joint to the tarsi, sud it furnished with only s single claw. Tbe males have no rostrum but two wings, which when st reat lie borizontaliy on the body; the femalea are provided with $s$ roatrum snd are wingless. The species live on treea or plants, adifferent speciea on each. Their larve are like oval or round ecsies, on which account they are sometimea called Scale insects. Many are British. [Coocus.]
 коккis(kokkis), genit коккi8os (kokkidos), dlmin. of ко́ккоя (kokkos).] [Coccus.]

Bot. : A form of conceptacie consiatling of a globular tobercle with a free or confluent ceiInlar wail, and nct as a rale opening by a terminal pore. It occurs in the rose-spored Alge.
©ő--̧ı̆fr-ẽr-oŭs, a. [Lat. coccum; Gr. кóккоs (kokkos) $=$ a berry, and Lat. fero $=$ to bear. 1 Bearing or producing berries; bacciferous.
coo-ci'ma, s. pt. [Mod. Lat. coccus (q.v.), and neut. pl. adj. auff -ina.]

Entom. : A tribe of the aub-orderHomoptera, type Coccidæ.
*oðo-gin'-̨̌-an, a. [Lat. coccineus.] Dyed scarlet or crimson colour. (Blount.)
OXo-çin-a1'-1a, \& [Dimin. of Lat. cocoinum, s. $=$ ercarlet.]

Entom.: A genue of Beetlea, the typical one of the family Coccinellidx. They are generally beantifully coloured, having as a rule the elytra red with white spota. Sharpe enumeratea eighteen apecies as Britiah. Coccinella septempunctata is the Common Lady-bird.
 nella (q.v.), and fem. pL adj. suff. -idac.]

Entom. : A family of Beetlea, tribe Trimera, i.e., having apperently only three joints to the tarsi. They are oo convex shove, while tiat belcw, as to reaembie littio hemispheres. The antennæareclsvate. The animals when taken feign death. They are known as Lady-hiria, and sometimes appear in large rumbera. They sra not merely harmlesa but uaful to man, feeding on the Aphidea, or Plant-lice, which destroy the plante. Sharpe enumerates twelve genera and forty-one apecies as British.
coo-čin'-el-liñe, as [Mod. Lat. coccinella, and Eng. auff. -ine.] Pertaining to, or characteristic of the Coccinellidg (q.v.).
oбc-çin'-1-a, \& [Lat. coccineus, cocolnus $=$ scarlet.]
Bot.: A genns of Cucurbitacex, with dicecious flowere, having five stamena united into a columa; the anthers in three parcela. The fruit is cblong, and has on it ten white lines. The fruit of Coccinia indica, s common wild Indian apecies, is eaten by the natives in their curries.
oXe'-ǧn-In, s. [From Mod. Lat, oocous, and suff. ine (Chem.).]

Chem. : $\mathrm{C}_{14} \mathrm{H}_{18} \mathrm{O}_{5 .}$ A substance obtained by fusing carmine-red with potash, and dissolviag the mass in water, acidifying with suiphuric acid, agitating the filtrate with ether and eva porating. Water extracts from the residue oxalic and anccinic acida, and leavea Coccinin undissoived; it crystallizea from hot sicoho in microscopio rectangular tablets, which are very aoinble in dilute alkalies, forming a yellow solution which on expoaure to the air turns green, vioiet, and purple-red.
ơo'-ç̆n-ite, 8. [In Ger. coccinit, from Lat. coceinus, ooccineus ; Gr. ко́ккıvos (kokkinos) $=$ scarlet, and anff. -ite (Min.) (q.v.).]

Min. : A mineral of adsmantine lustre and doubtful composition, occurring in reddiah brown particlea on selenid of mercury. (Daka.)
cơo-cŏb'-ry̆-ð̆n, s. [Gr. ко́ккоs (kokkos) = a kernel
the cochinesl insect, snd $\beta$ pevo (bruon) $\dot{\operatorname{s}}$ mossy sea-weed, a ichen, a catkin.] Bot.: A genus of plants, order Plperaceæ. Coccobryon capense is nsed at the Cape as a atomachic.
 $k 0 s)=$. . . the cochineal insect ; карпós (kar. $p o s)=$ fruit, aod Lat. pl. adj. auff. idoe.]

Bot.: A family of Algals, order Ceramiacem (Roae-tanglea), aub-order Cryptonemex
cǒc-có-chlör'-i-dæ, s. plo [Mod. Lat. coecochloris, and fem. pl adj. auff. -idce.]
Bot.: A family of Confervacex, sub-order Palmeilez. They have the elimy subatratim evident.
ç̛-có-chlör-1s, s. [Gr. ко́ккоs (Kokkos) = .. the coclineal insect, and $\chi^{\lambda \omega}$ pós (chioroc) = pale green.]

Bot.: A genna of Algals, the typicai one of the family Coccockiorioe (q.v.). Thene are aeveral species apreading on the ground, in moiat aituationa or aquatic.
 $=\mathrm{a}$ keriel, and кv廿éגך (kupsedè) $=\mathrm{a}$ hollow veasel.]
Bot.: A genus of Cinchonads, with s vase llke fruit Cococypselum repens is a creeper with bluish-purpie berries, a native of the West indiea, but cultivated here.
oŏo-ç̆'-nic, a. [From Gr. ко́ккоs (kokkos)= a kernel, and Lat. gridium, with granum Gnidius $=$ pertaining to Gnldus or Cnidus, a town of Caria, now in ruina.]

## coccognic acld, s.

Chem.: An acid contained in the seeds of Daphne gnidium. It crystallizes io colourlesa priama.
oठc-cŏg'-ninn, s. [From Gr. ко́ккоя (kokkos)= a kernel, and Lat. gnidium.]

Chem.: A crystallina colourless aubstance $\mathrm{C}_{20} \mathrm{H}_{22} \mathrm{O}_{81}$ contained in the seeds of Dophne Mezereum. It is aparingly aoluble in water and aublimes when heated.
oðe'-có1-īte, s. [Fr. coccolite ; from Gr. «о́ккоя (kokkos) $=$ a berry $; \lambda i \theta o s($ (ithos $)=$ a stone.]

Mfin: A white or green granular variety pyroxena srranged by Dana underhis variety Time Magnesia Pyroxene or Malacolite (q.v.). The British Musenm Catalogue makes it a variety of Diopside (q.v.).
 kerned .. the cochineal insect, and $\lambda$ toos (whos) =a stone $]$

Biol ( $p \mathrm{l}$. ): The name given in 1858, by Prof. Huxley, to one of certain minute oval or globular calcareous bodies found in countless numbera to the ooze of the Atlantic, either detached or adherent to amall pieces of protodetached or sdherent to small pieces of protoplasm. They have since been dredged np acourding to Guembel, in limestone of all acourding to Guembel, in in is now generally considered that they are Unicellar Alga.
 kernel ... the cochineal berry, now known to be an insect and not a berry, and no,ós ( 10 oos) $=8$ lobe, with reference to the character of the fruit.]

Bot. : A genas of plants, order Polygonaceas. The calyx is 5 -parted and nltimately becomes enccalent; the corolla is wanting; the stamens are five, anited by thic fitamenta into a ring: the stylea 3 ; the stisma simple; the oue-seeded mot being enveloped in the sncculent enlarged calyx. Cocooloba uvifera is the Sea. side Grape, which grows on the ahores of the West Indian Isladds, Bermuda, and the continent of America It has large glossy green leaves with red veins. The herries are eatable. It is an evergreen. It helps to bind together the sandy sea.coast, and protect it against the destnictive effect of wind and sea. The wood is used firr cabinet work. A red colouring matter in it is employed as a dyo. The wood, Jeaves, sud bark are astringent, and a decoction of them evaporated forms Jamaica Kino.
cocc- cómil'-1-a, cŏca [1tai.] A kind of plum growing in Calabria, the hark of which-especisliy of the root-is gits virtues in interninttent fever. (Ogilvie.)
eče'-co-neis, s. [From Gr, ко́кко $(k 0 k k 0 s)=$ a Eernel $\cdot$ a berry, and mints $(n \overline{e r i s})=$ unpractised fo a thing . . . powerleas, feetle (?)]
Bot.: A genus of Diatomscer. Various species are British, some fresh-water, others . narine.
 $=$ a kerinel...a berry, and mua ( $n \overline{m a n}$ ) $=$ that which is spun, yarn.]

Pot.: A genus of Diatomsces. Cocconems tencentatum and C. cistula are common in fresh water.
cơc'-cós-phëre, \& '[Gr. ко́ккоs (kokkos) = a herry; Eng. sphere (q.v.).] The name gived by Wallich and Huxley to a apberical mass of sarcode, or protoplasm, enelosed in a delicate calcarsous euvelope, and bearing coccoliths on its external aurface. They are found in profusinn ln deeprses coze, or flosting in tropical countries.
©ǒc-cŏs'-tĕ-ŭs, s. [From Gr. коккоs (kokkos) =akernel. the berry like the cochineal insect, and ojariov (asteon) =a bone.]

Patoont.: A genus of ganoid flsbes, section Placodermata, Bub-order Ostracostei. They have, however, sfffinities, as Prof. Huxley has pointed out, to the Teleostean Siluroids, with which, perhaps, they should be placed. There is a cephalic buckler covered with small hemiopherical tobercles, the notochord was persistent, but the rays of the dorsal and ventral ens, as well sa the neural snd hæmal spines, are ossified. The tail was heterocercal. Coc costeus is a very characteristic organism of the old Red Ssndstone, occurring at Gamrie, in Grkney, Caithness, \&c. It is found also in the Eifel country and in the Hartz. The genus eeems to have come into existence, however, in the Upper Silurfan; species of that age lhaving been found hy M. Barraxde in Bohernia.
ơocó-thrânsi-tēs, TFrom Gr. коккоs a karnel . . a berry, and opaiv (thraub), fut. epav́gw (thrauso) = to crush.)
Ornith.: Grosbeak. A genus of birds, the typical one of the sub-famfly Cocenthraustinge, There ars two British species: Coccothraustes vulgaris (the Hawfinch) and C. chloris (the

Greenfinch or Green Grosbeak). (See these English words.)
oơo-ct-thrâug-ti'-nee, a pl. [From Mod. Lat. coccothraustes ( $q \cdot v$. ), and fem. pl. odj. suff. -ince (q.v.).]
Ormith.: A sub-family of Conirostral Birds, family Fringillidow. It contains the Grosbeaks. As their names import, they have thick bills fitted to crush berries. They have large wings, short tails, and stout feet. ${ }^{(C 00}$. cothralistes.]

* coc-cow, a. [Cucsoo.]
oбd-cnle, s. [Dimin. of Gr. кбккоs = . . . a berry.] (For def see extract.)
 any, bk, L., ch. IL.
oбc'-cu-1ǔs, a. [Coocule.]
Bot.: A genus of plants, order Menisper. maceæ. Sepals 6 In 2 whorla, petals 6, etemens 3 or 6 , ovaries 3 , 6 , or more; drupes one-celled, one-seeded. The geaus consists of clinubing plants with small, generally whlte or green, dicecious flowers snd beart-shaped leaves. In general the spectes are bitter febrifoges. Cocculus criopus, a twining species with tubercles or warts on the stem, found in Sumatra and the Mollocea Islands, is used by the Malays in intermittent fevera. used by the Malays in intermittent fevera.
The root of what was formerly called Cocoulus The root of what was formerly called Cocoulus palmatus but is now designated Joteorhiza the Calumha-root of commerce, from which a bitter is ohtajned. [Calumba.] a decoction of the fresh roots of C. villosus, with \& few heads of long pepper in goat's milk, is administcred by the Hindoos in rheumatism and old venereal complaints, os is a green jelly for beat of urine. An ink is made from its fruit. In Arabia a spirit is distilled from the acrid berries of C. Cehatha.

## cocculus indicus, $s$.

Comm., de.: A popular name given to s species of Menispermscex, which furnishes eertain dried berries constitnting an articie of commerce. Thsy are imported into this country from the East Indies. There is no botanical species with this exact name. The plant which furnishes the berries, the Menispermum Cocculus of Linnæus, was called by De Candolle Cocoulus suberosus, but Wightand Arnott have since removed it from the cocculns genus, and term it Anamirta Cocculus. The drupe resembles a round berry, the aize of a pea or larger, wrinkled externally, and with a brittle husk. The keroel is intensely with a brittle hask. The keroel is intensely weight of s powirful bitter narcotic poison Weifht of a powniful hitter narcotic poison
called Picrotoxin (q.v.), also basca called called Picrotoxin $(q . v$.$) also basca called$
Menispermine $\mathrm{C}_{18} \mathrm{H}_{24} \mathrm{~N}_{2} \mathrm{O}_{2}$, s crystalline base, Menispermine $\mathrm{C}_{18} \mathrm{H}_{24} \mathrm{~N}_{2} \mathrm{O}_{2}$, \& crystalline base,
Paramenlspermine, and several organic acids, dic. C. indicus is a deadly poisorg, Is nsed to give a bitter taste to beer, and is thrown into rivera to kiil the fah. it has been nsed in form of ointmeut in certain skin diseases. The populsr notion that these berries were used to iacrease the intoxicating properties of pirter is said, on ths authority of an eminent analyst, to be erroueous.
©o'-cйm, ${ }^{8 .}$ [Lat. coccum =a berry ; Gr. кúxos (kokkos).] [Coccus.]
Bot.: Gærtner's name for $s$ kind of fruit, the same as Coccuts, 2 (q.v.).
cŏc'-cŭs, s. [Gr. ко́ккоs ( $10 \mathrm{ok} k o s$ ) $=$ a kernel, is . the cochineal insect, the female of which is solike a berry that to was long mistaken
for ons.] for ons.]

1. Eutom. : The typical genus of the family Coceldar (q.v.). Mspy species are lurtful to plants in greenhouses snd elsewhere. Gardeners call them bugs. Coccus adonidum (the Mealy Bug) does damage in hothouses, as does C. Testuds. C. Vitis (the Vine-scale) injures vines, and C. Hesperidum oranges. They may be destroyed by painting the branch on which they congregate with spirits of turpentine, or fumigsting them with turpentine, tobacco, or oulphar. Others, however, sre of value as dyes. C. Cacti, found on the Cactuses, is the Cochineal Iosect [Cocrineal.] C. Ilichs, found on Quercus coccifsra, an evergreen oak in the south of France, furnishes a crimson dys which has long been koown to msnkind. C. Polonicus is used by the Turks as a red dye. Co Lacos yields lac. [Luc.]
2. Bot.: A shell; a carpel separating eles-
tically from an axis common to it and other carpels. (Trease of Bot.)
 Gr. xórcrus (kohikux) $=\mathrm{a}$ cuckou; 80 called from ita rescinhiance to a cuckoo's beak.]

Anat.: Pertsining to or connected with the coccyx, as the coccygeal bones, the coccygeal artery, the anterfer and postarior coccygeal nerves, de.

## coccygeal gland, a

Anat : A gland rarying in size from that of a lentil to that of a small pea, occupying a boliow at the tip of the coccyx.

## cono-gy̆'s'-ă-ŭs, z. [Cocovoral]

Anat.: The musele which retaino the coccyx io its place, and preventa it from being forced backward doring the expulsion of the faces. (Dunglisoma)

## 

 MORPHE]A. As adj.: Belonging to or claracteristic of the Coccygomorphax (q.v.).
B. As subst.: Any individual of the Coccygomorphz.
cǒe-çy̆-got-mor'-phee, 8. pl. [Mod. Lat,
 kugos) $=$ a cuckoo, sad цopфij (morphe) $=$ form.]

cock'-a-tôc, * cac-a-to, * ccck-a-toon co-ca-to, s. [Fr. kakatou, kakatoes. Ger kakadu; from the Malsy kakatuo $=$ a cocks too, an onomatopoetic word.]

1. Ord. Lang.: Any species of the subfanily of birds described under No. 2.
2. Ornith (pl. Cockatoos) : The name given to the birds of the femily Psittacide, Eubfamily Cacatuine, the same that was called by Swsinsoo Plyctolophinæ. They hsve a arge head, ornamented with a folding or procumhent crest, s short very broad bill with the calmen of it very much curved. The tail is lengtheoed and broad, the festhers not narrowed. "Besides their peculisr utterance "cockatoo," from which they derive tbeir vame, sureamed out harshly, they are not sble to aequire more than a few words, their imitative power being buts slight. They inhabit Australia and the Eastern lslands, living in woods, and feediag chiefy on seeds and fruits, which their bills are well adsnted to crush They also est insects. The species most irequently bronght to England are the Great Sulphur-crested Cockstoo, Cacatua galerite, ad the Small Sulphur-crested Cockstoo, $C$ sulphurea. They are white with yellow crests. They become thoroughly doncesticated.
"Here are also-[In the Manritius] herons white and
beautiful :-cositoen may well take name from kaxoly tov, whore oature and so indoultalian"-Sir $T$. Herbert: Travels, p. 383
cơck'-a-triçe, " cǒc'-a-tryse, * kŏk'-atriçe, s. [O. Fr. cocutrice $=$ s crocodile; from Low Lat. cocatricem, acc. of cocatrix $=\mathrm{s}$ crocodile, a Dasilisk : a curruption of Low Lst cocodrillus $=s$ crocodtle. "The $r$ being dropped, as in Sp. cocodrilo, Mid. Eng. cokedrilt, the fable that the animal was produred fronn a cock's egg was invented to account for the name." (Skeat.)] [Basilisk, Crocodilir.]
l. Ordinary Language:
3. Lit. : A basilisk, a fshulous serpent supposed to have been produced from a cock egg hastched by a serpent. Its bresth sud aven its look were believed to have beeu fatal to any who cams within their infuence.

Cocaryse Basiliscus, cocodrillus."-Prompt. Part. Por, behold, I will send serp, ents, cockatrices, amons you, mith the Lord."-Jer. Fifil 17 .
*2. Figuratively:
(1) Anything venomous or deadly.
"This wha the end of thin little cockatrice of $n$ Eing first. ${ }^{\text {that }}$ - Bacm
(2) A courtesan, a hariot.
II. Technically:

1. Her.: For the difference between s basilisk snd an amphisien cockstrice, see Babilisk.
2. Scrip.: The word "cockatrice" occars four times in the text snd once in the margin of the suthorised version of the Bihle. In four of these passages, viz., Prov. xxiil. 32 (msrgin), lasa. xil. 8, lix. 5, Jer. viii.

17, the word is ? vize, Isa, xiv. 29, it is עएֻ (tsepha). Tsiphoul means that which is generated from a serpent hence s serpent itself. Tsephs, which is from the same root, is a serpent's progeny. It ovidently means a very venomons serpent, but it will be ohserved that no conntenance is given in Scripture to the pable about the origin of the cockatrice, or to say other of the origin of that cockatrice, or to say other of the that animal of now fallen fame.

Cơck-āyne, Coc-agne, s. [Fr. cocaqne, O. Fr. cocaigne; ltal, cucagna, cuccagna; from cucca = dainties, sweetmests; from Lat. coquo $=$ to cook; froni the kelief that the housea in this fabulous land were covered with cakes.]

1. A fabulous or imaginsry land, the home of luxury and juleness.
2. The land or home of cockneys, cockneydom.
oock'-chāf-ẽr, 5. [Eog. cock, and chafer (q.v.).]

Entom. : Ths popular name of a lamellicorn beetle, Melolontha vulgaris, found in England. It crawls awkwardly on the glound, and when it flies does so heavily sud with a whirring hum. The larva are found in dung or in decayiag vegetabls mattor or buried in the ground.

2. Some Lepidium. (Brillen Holland.)
 stuck-up, impudent.
cocky-baby, s. A popular name for a plant, Arum maculatum.

* cŏck'- ${ }^{-5}-$ obl-y, a. [Prob. from cock, and yellow.] Only used in the compound cockyoly bird $=$ a bind of bright plunage, a Yellow Hammer.
"The charming little cockyoly-birda"-C. Eingniey :
cō'-cō (1), in compos. [CocOA (1).]
cō'-cō (2), s. [CocoA (2).]
I Le Petit Coco: A name given in San the pio a tree, Theophrasta ussiet, from
có'-cōa (1), s. [Iu Fr. coco, but Littré con siders that the French worl comes froal the English one; Port. coco, probably a contraction of macooo, macaco $=$ a kind of mankey, to the face of which the cocoa-nut, with the three scars upon one ead of it, was thougit to bear a resemblance.)

1. Of the forms cocoa and coco (but of these coco exists nuly in the componnd coco-nut cocoa-nut): The fruit of the paliu described under 2. [Cocon-Nor.]
2. One of the best known and the most prized of all the palm-trees. It is the cocos nucijera of hotanists. [Cocos.] Its appropriate habitat is the coast of islands or contipriate habitat is the coast of entand the sama parallel of Southern latitude; thus it abound plong the coasts of the South Sea Islanda, of India, of South America, and other phaces. It is sometimes found inland, even to the eleva tion of 2,900 feet above the sea, but it dees not sbound or Hourish sway from the sea; thus while there are many milliona of them slong the sea-coast of India, coasideralle regions in the interior may be traversed without more than two or three cecoa-nuts being been. The tree rises to the height of aixty to minety feet. The stem is slender and narked by transverge rings, being the scars left by lesve now fallen. At Bounbay and elsewhere tha natives may be seen climbing up the cocna-nut trees by means of those rings, and descending sgain with the fruit, their frail support against falliag being a rope made into a large loop encirching their waist and the stem of the tree. encirchag their waist sha the leaves, others are "feathery palm-trees." The cocoa-nut belongs to the latter category; its leaves, generally 12 - 15 in aumber, like gigantic ostrich-feathens exist In a buuch or tuft at the aominit of the unbranched stem. A tree produces about 80 or 100 nuts anamally. The uses of the cocoenut tree are innumerable. For those of the
trait see Cocon-nut. The juice which flows from its wounded spathes is cailed in Indis toddy (q. v.)., and masy be fermented into excellent wine, and an Intoxicating iiquor made from it, arrack. Or the sugar itself may be separated, when it is cailed Jaggery. The anexpanded terminal bud is a delicate article of food; the ieavea are made into thatch for dwsllings, or into baskets and buckets, or materials for fences, or as sulistitutes for paper to write on. The midrib of the lesves serves for ours: their ashes yeld potash; and from the reticulated substance at their base a coarse kind of cloth is manufsctored. The hard cuss of the stem is usde iuto drums, hard cass belag ased in the construction of hats; the lower part is so lard ss to take on a polish makiag it resemble agate. The root ${ }_{i}^{2}$ polish making it resemble agate. The root is sometimes uasticated instead of the arecanut, a ad the fitires mads
beskets. (Linulley, oc.)

## The dreanis is past; and thon hast fooud again <br> Thy ere mas and lemannes palme aud yaum

cocoa-nut, coco

1. Ord. Lang., Bot. \&e.
(1) The frnit of the palm described under No. 2. The ovary contains three ovules, hut two of these are unlformly abortive. They leave three acsrs on one eud of the fruit one of which is so soft that it may be pricked with a pin: from this the embryo comes The other two are hard and impenetrable Its ose for food, and the deliclous beverage it contains, are oniversally known. The fihres which surronnd the rind are made into a kind of cord, called coir-rope, which, from it lasticity and streagth, is well sdapted for cables. See slso Cocoa-nut Oil.
(2) The tree furmishing the fruit. [Cocoa (1), 2.]
"The most precions tuheritance of E Singhalose la Which wand declacidin the dibtrict court of Gulle, with in $A$ very short period, the ribleceurt of din dipute, with elain to the 2, spith part of tea $0000-\mathrm{nus}$ trisek "Ten-
2. Chem.: The colourless, slightly opslescent thid contsined in the interior of the seed of Cocus nucifera is called the mik. It consists of 91.5 per cent. of water, 0.46 protein, 07 fst, 6.78 nod-nitrogenous extractive matter, and $1 \cdot 19$ ash. The ash of the kernel of the cocos-nut contains sbout $43^{\circ}$ per cent of pot ash, 8 - soda, 4.l lime, $9 \cdot$ magnesia, $13 \cdot 5$ chlorins. 169 phosphoric scid, 5 sulphuric acid and 0.5 of silicic acid.
f The double cocor-nut: A pslm, Lodoicea Seychellarum.
Sea cocoa-nut: The same as Double Cocoa nut (q.v.).

Cocoa-nut fibre: The flbre in which the cocoa-nut is enveloped.
"The beds are staffed with cocac-nus fibre, a material Fhich Ls more ex pensive than foock."-The ${ }^{\text {Fmigrama }}$ Cocoa-nut oil:
Comm. : The fstty substance extracted from Coeus nucifera, de. A whitish peculiar smelling fat, melting at $25^{*}$, and remsining liquild for some tinue. It easily turns rancid when ex posed to the air, snd consists chiefly of glycerides of caprylic acid, $\mathrm{C}_{7} \mathrm{H}_{10} \cdot \mathrm{COOH}$, isuric acid, $\mathrm{C}_{11} \mathrm{H}_{2} \cdot \mathrm{CO} \cdot \mathrm{OH}$, myristic acid, $\mathrm{C}_{13} \mathrm{H}_{27} \cdot \mathrm{CO} \cdot \mathrm{OH}$, and palmitic acid, $\mathrm{C}_{15} \mathrm{H}_{31} \mathrm{CO} \cdot \mathrm{OH}$. It was formerly thought to contain cocinic acid, $\mathrm{C}_{13} \mathrm{H}_{36} \mathrm{O}_{2}$ melting at $35^{\circ}$, but it has been found to be a mixture of lauric snd myriatic acid. Cocoa-llut fat is chiefly used in the manuface ture of soap, the refuse of the nuts being lormad into a cske for feeding esttle. Some of the fatty scils sre said to be uncombined with glycerin. The more solid portion can be separated from the minre liquid fsts by pres. sure, and used for the manufacture of candles.
cocoa-plum, s. The name given in the West indies to the fruit of Chrysobalanus leaco.
*-OOB (2), s. [Corrupted from Spanishmericsi, \&e. cacco (q.v.).]
Chem-: A beverage prepared from ths roasted ceeds of Theobroma cacao. Its chemical composition, according to Mr. Wanklyn, is as follows: Cocoa-butter 50 per cent., theobromin 1.5 , starch $10^{\circ}$, albunien, fibrin, and gluten $18^{\circ}$, gum $8^{\circ}$; colouring matter $2^{\circ} 6$, water $6^{\circ}$, ash $3 \cdot 6$, loes, stc., 0.3 .
TForms of cocoa sre ohtained at the shops as rew, roasted, and flaked nuts, and
cocos nibs. The introduction of the method of preparing these is sttributed to Sir Hsns Sloane. It is alwsys prepared with other substsnces. The nibs are the parest form in which it is supplied to the public. Next come cocos essence, cocoa extract, cocostina, aud chocolatine, which are the groaud wibs deprived of half their fat. Thea come flaked sud ruck cocoas, which are compused of cocua, sugar, and arrowroot or sago. Lastly, we hsve the so.calied soluble cocoas, which consist of 40 per cent. of ground cocoa, the remainder codsisting of sagar and starch. These sre sold codsisting of sagar and stsrch. These sre sold

ơd'-dẽr (1), s. [Eng. cod (1), s. ; -er.]
I. One who fishes for cod.

2. A boat or vessel engaged in the cod fishery.
cơd'-dẽr (2), s. [Eng. cod (2), s.; -er.] One who gathers pease in the pods.

Odd-der-ar, s. [Etymol, doubtful.] A vagrant, a vagabond.
"To ceras, vesy, se all maner of oodderaris, vage
boundis, a puyr loddels."-Aberd. Reg., A. 1539, v. 16.

- odid'-dĭng, a. [Etymol. douhtful.] Meaning douhtful, perhsps lecherous.
"That oodding epirit had they from their mother,"
Codi-aling-ton, s. \& $a$. [The name of a celebrated opticisn.]

## Coddington lens.

Opt. Instr. : A spherical lens having a deep equstorial groove eround it in the plane of a great circle perpendicular to the axis of vision. The grovere is of such $s$ depth that the stem connecting the hemisi, heres has a diamster equal to oue fifth of the focal length. This kind of lens was invented by Dr. Wollaston, who called it the periscopic lens. It was afterward greatly improved hy Sir David Brewater.
cơd'-dle, cod'-le, v.t. [Etymol. doubtful.] I. To parboil or soften by boiling.
2. To pamper, to fondle, to cocker.
cod'-dle, s. [Condle, v.] One who coddles or pampers himself; on effeminate, luxurious person.
cod'díy. a. [Eng. ood (2), s.; -y.] Full of code or pods, lunsky.
coddy-moddy, s. A name applied to a gull in liss first year's plumage.
"The hran, with a hrown and grey bnck and white
hrenst, the coddymoddy."-Hill: Hiut. Animals, p. $45 i$.
oōde (1), s. [Lat. codex, caudex $=$ a tablet.] A systenastic collection or digest of laws, classified and simplitied.
digest wis that the furiner deatroyzed anme existing laws and conflrmed others with which new laws were hiendod, While the latter merely collected and atated 18 Ies. II (1) Code Napoleon:
Law: The nams given to a code promulgated in France in 1804, originaliy under the name of Code Civile des Français, but altered to Code Napoleon when the first emperor of that name came to the French throue. The term is sometimes used in a more general sense.
(2) Code of Justinian: [Named sfter Justinian, who was born of obscure parentage in A.D. 482 or 483 ; became emperor at Constantinopls In April, 527; hy means of his sble generala, Belisarius snd Nurses, added Italy and Africa to his empire, and died Nov. 15 , 565.$]$ A coile of law drawn out under tha suspices of the Emperor Justinisn. In April, 529, was iszued a connpilation of useful laws 529, was isened a conupilation of useful laws
or constitutions from Hadrian to Justinian. In December, 594, a revised code was pubIn December, 534, a revised code was pub-
lished, sind was accorded the force of law. It was called "Was accorded the force of law. It lectionis." In December, 533 , a commission,
headed by the celebrated jurist, Treboning published en elaburate work called "Digestre publis hed an elaborate work called "Digestre" (things digested) and "Pandecte" (embracing
all). This also received the force of law, and all). This also received the force of law, and old jurista. Just before the Digest appeared, there came flrat, hy direction of Juatinian, an abstract of the greater work. To this wss given the name of "Institutiones " (Institutes). New laws aubsequently enacted were published under the nsme of Novee or Constitutiones Novellas, or Authentice. They are often quoted as his "Novels," which word here must nat be Interpreted works of fiction. The expression "Code of Justinian," used in a general aense, comprehends the "Code pro perly so called, the "Institutes," the "Di geat, and the Novels; used in a more specito sonse, ith Code of Justlnian la a very essential part of the clvil law.
(3) Code of Theodosius: [Named after Theodosius II., generally called the younger, who was born on April 10, A.D. 401, and died emperor at Constantinople on Jnly 28, 450.] The Code of Theodosins (Codex Theodosianus) was a collection of laws gublished in hia reign. They came forth and acquired legislative force in A. D. 438.
cōde (2), s. [Cude.] A chrisom-eloth. "With eoodal and with code"
code (3), s. $[\operatorname{Cov}(3)$, s.] A pllinw.
code (4), * coode, s. [Etymol. doubtful ! Cobbler's wax.

cöde (5), s. [Cun.]

* code'-bĕc, s. [Fr. caudebee, from the name of a town in Normendy.] [Cavoesec.] A kind of hat.
cō-dĕ-fĕn'-dąnt, * cō-d㐅-f̌n'-dent, *. [Pref. $c o=$ con, and defendant (q.v.).] Ono who is joined with another as defendant in sny cause.
"Aoy landlord may, by leave of the court, be mude
a co-defendent to the actonn."-Blackstone, bk. in."
cō-deī'a, cō-deī'ną, có-deīne, s. [From Gr. кẃdeta (ködeia) $=\dot{\&}$ poppy head.]
Chem.: $\mathrm{C}_{18} \mathrm{HI}_{21} \mathrm{NO}_{3}$ or $\mathrm{C}_{1} \mathrm{CH}_{18}\left(\mathrm{CHI}_{9} \mathrm{CNO}_{3}\right.$ methyl morphine. An alkaloid ohtained by digesting opium with warm watar, pre cipitating the meconic acid with calciun chloride, sud concentrating the filtrate; the hydrochlorater of morphine snd codieine crystallize out first, and may be separated by treating their squeous oolution with ammonis, which precipitates the morphine the liquid is then evaporsted, and the co deine is precipitated by caustic potash, and recrystallised from ether; it forms colouries prisms when crystallised from water, which lose their water of crystallisation at $120^{\circ}$; the anhydrous alkaloid melts at $150^{\circ}$. Corlcing is a tertiary monamine; heated with ooda lime it gives off methylanine, $\mathrm{NH}_{2} \cdot \mathrm{CH}_{3}$, and tri methylamine, $\mathrm{N}\left(\mathrm{CH}_{3}\right)_{3}$. Codeine dissolves in methylamine, $\mathrm{N}\left(\mathrm{CH}_{3}\right)_{3}$. Codeme concentrated sulphurie acid without cnlour,
if the solution is warmed to $150^{\circ} \mathrm{C}$; a trace of molybdic scid turns it a dirty green colour, becoming blue; and a drop of nitric acid turns It a violet-red colour.
oó-dĕt'-ta, s. [Ital., dimin. of coda (q.v.).]
Ifusic: A few notes subjoined to the subject, though they do not reaily form an essential part of it, in order to lead melodiously into the counter-subject. (Ouseley.)
 of a tree, the same ass Caudex; (2) a book, a manuscript; (3) an account-book, a ledger.]

1. Law: A roll or volume, specially nsed In the suhjoined compound terms.
(1) Codex Justinianus: [Code of Justinian].
(2) Codex Theodosianus: [Code or Theodo givs].
2. Bibl. Criticism: A manuscript of any prr tion of the New or of the Old Testament, espe cislly of the former. The original menuscripts of the two Testamenta have been lost, sud thers is little hope of their recovery. In ou inability to ohtain them for parposes of con sultation, it is needful to fall back on other copies as fow removes es possible from the original. When in copying the Scriptures the

[^148]ancient tranacribera detected an ermr com－ mitted by some one of their predecessors，they did not simply erase it，but placed it as an erratum on the margin of tielr copy．As frratum on the margin of their copy．As were similarly noted，till at length the margin were similarly noted，till at length the margin restore the original text great value is attached to the acquisition of any manuscripts made in one of the earller centuries，from the power it gives one of eliminating errata belonging to subsequent periods．Manuscripts are divided into two classea：uncuas，writtan in canitals and with no apsces between ths words［UN－ cala，and cursives，writtan more in conform ity with modern practice．The line between hem ahould be drawn about the tenth cen－ tury．In this respect the modern Biblical critic has the advantage of his predeceseal When the N Tonta or When the New restament was rendered into English for the authorised version of the Seriptures，the Greek text used，that of Eras mus and Robt．Stephens，was based on MSS more modern than the tenth century．Now some of much earlier date are available，pro minent among which are the flve noted be low．
Codex A（called also Codex Alexanirinus） The Alexandrian，or Alexandrine，MS．of the New Testament．A MS．yent hy the Patri arch of Constantinapie as a present to the English king Charles L，and believed to be－ ong to the middle of the fifth century．A correct edition of it was printed in I860．
Codex $B$（called also Codex Vaticanus）：The Vatican codex，or MS．；no named because preserved in the Vatican．A very valuabie IS．，belonging，it is thought，to the middle of the fourth century，if not even oilder．It was discovered in the iatter part of tife four teenth sentury，but was a long time with held from the examination of scholars．It was only in 1868 that it became practically accessible by the publication of a facsimile．

Codex C：The Ephraem manuscript．so called becalse some of the compositions of Ephraem the Syrian had been written over it．［PaLIM PaEst．］It is supposed to be dated at least as early in the fifth century as Codex A．
Codex D：The mannscript of Beza，called after this eminent reformer，who presented it to the University of Cambridge in 1581．It is supposed to belong to the sixth century．

## Botany:

J. A genus of plants, order Cinchonaceax, tribe Coffer, family Paychotride. The corolla
is tubular, with four or five spreading seg jnents, the starnens coming from its throst, the berry succuleot, with two cells, each with single seed. About forty or fifty species are known, the majority from the Western hemt sphere. Coffea arabica is the coffee tree or shrub. It is an evergraen, with ovsl, ahining harp-polated leaves, and five-cieft white fra projecting stamens the berry is first red and then purnie. Though called arabica and abundant in Arabla, yet it s said to have been bronght at firgt from s said to have Abyss. lodies, Bermuda, and the hotter parts of Anierica,
2. (Pl. Cofece): A section of Cinchonaces, containing those whose ovary has only one or two seeds in each cell, whereas the Cinchones proper havo a many-seeded ovary.
cơr-feĕ, * cơf-fê', s. \& a. [Fr. \& Sp. cafe: 1tal.' caft. Corrupted from Arab. kakwa $=$ coffee.]
A. As subst.: The ground roasted seeds of Caffea arobica. The seeds or beans are imported into this country chlefly from the East and West Indies, but the finest quality, Moche coffee, comes from Arabla. In the raw state the beans are destitnte of fiavour, but oh roasting, a peculiar brown oil, caffelioe, is developed, and it is this body which gives to the coffee its charscteristic aroma. The most valuable constituent of coffee is caffeiue, $\mathrm{C}_{8} \mathrm{H}_{10} \mathrm{~N}_{4} \mathrm{O}_{2}$, an alkelold identical with the

COFFEETHEE,

1. Single flower. a Stamen a Single frust
alkaloid theine found in tea. In the roasted bean it never exceeds 1 per cent. Taken in moderation, coffee is one of the most wholemomeration, cofee known. It assists digestion, some bevcrages known. It assists digeation, exhitarates the sipirits, aud was not known to the Greek a and Romans but has been used fron time immemorial in Abyssinia and Ethiopit. In Arabia it is known to have beeo uzed in the 15th century and thronghout Asia in the 16th. It is a native of Abyssinia, Arabia, and parta of Africa. It was brought to the Weat Indies in 1720 , and ita cultivation has spread into Brazil and other parts of Central and South America. The annual production at present in varions countries is: Africa, 36,400 tons: Brazil, 333,000) tons: Ceylon, 63,000 tons: Java 00000 tons; Manilla, 35,000 tons; West Indies, 4.0010 tons with considerable quantities in 4, 0 e the Central American States, Vene aome of the chery outher sulstances are znela, dc. Chitory and other sinistances are often usea as subatites, or adulterationa Nooe of these substituter colitailis any snbstance analngons to the alkaloid caffeine found in coffee. In fact their only use appears to be to give the coffec infusion ${ }^{3}$ greater deptht of colour. The sale of a mixture of coffee and chicory, or any substitnte for chicory, is leerfectly legal, providecl such mixture is properly labelled. It is only when a mixture is sold as pure coffee that any admixture becomes an adulteration. Any of these substitutes wheo mixed with coffee can be readily identiffed by means of the microseonc, even when present n very smali quantity. (W. Harkness, Esq. F.C.S.)

## II. Technically:

1. Afonet. : A piece of metal on which certain claracters are atamped by authority, giving the plece a certain legral current value. min - - A whito ribwid to whleht wa fastened s gold

2. Law: By 24 and 25 Vic. c. 99 it is a felony to counterfe:t coin, or Imanair or lighten it, or have in one's possession clippings of coin.
3. Arch.: A quoin.

IT To pay one in his own coin: To return tít for tat; to treat a person as he has treated you.

## B. As adjective: (See the compounds)

coin-assorter, s. A machine which separates different kinds of coins by size, or colns of the same kind by wcight. (Knight.)
coin-connter, ${ }^{g}$ An arrangement by which the prucess of hand counting, picee by piece, is dispensed with. A shavel or tray has shallow depressions of a given leagth, width, and depth to hold so many coins of a given $k$ ind. The coins are shovelled into the tray, which is then skilluliy agitated untii the coins have shagly occupied all the spaces. The remainder are brushed off, and the complete quota is thrown into a scale to verify the count by weighing. (Knight)

## cooln-made, coyne-made, a. Mercenary or simoniacal. <br> "Coyno-m/ude Psitors let the Sock decay." <br> Danjes: Huse's Toars, ph is. (Davicen)

coln-weighing, $a$. Weighing or designed to weigh coin.
If Coin-weighting machine: A machine for weighing coin and assorting them accordiog to their full or light weiglit. (Knight.)
coin, "coigne, "coyne, v.t. \& ఓ. [COIN, s.] A. Transitive
I. Literally:

1. To mint or stamp pieces of metal for money.
"And elke to cotpne the money of mandry motal" $\begin{gathered}\text { Gover, } 1 \mathrm{l} \text {. si }\end{gathered}$
2. To stamp a piece of metal, as a medai, \&c.
.'.i.. thif mednl was really ooined by an artifioer
II. Figuratively :
3. To make or acquire, as money.
"Tenants annuot cofn rent just at quarterday, but
4. To originate, to invent (not in a bad sense).

Let hlm that thinka of me mablectly.
Know, that thle gotd must erina a stratiagem."
Shakerp: Tut. And., IL 8
oodn worde . . ." Shakesp. : Cortoranue, ill. 1
2. To fibricato, to Invent (in a bed sense)
"Your creruplee and arguagenta bring to my mind
Comper. Pity for por
B. Intrans: To furge or make connterfols money.
-6in'-ase, s. [King.coln; age.]

## L. Literally:

1. The act or process of coinling money.
"The care of the cofnage wnu committed to the tufe
siour magistratise . . "-Atterbury.
2. The coln or money coloed (generally in a collective sense).
".... great erowds of poople continualiy otiting to
3. The aggregate amount or value of money coined in a certain period.
II. Figuratively:
4. The act of inventing or originating anything.
of Words, rums ioto affectation..."-Dryden : Juvarah m Dodication.
2 An lnvention, a new or original prodaction.
5. A fabrication, a forgery.
"This is the very eotnaje of your brain".
oō-in-çide', v.i. [Fr. coincider: Low Lat coincido: $c o=$ con; incido $=$ to fall in , cado $=$ to fail.]
L. Ordinary Language:
6. Lit.: To fall upoo or meet is the asme point; to fail together or agree in prosition.
 enrtb ubeless."-Cheyne.
7. Figuratively:
(1) To agree, to concur, to correspond or be Identical with.
"Trbe rules of right Jodgement and of good ration
cinntiou often oovencide with ench other." Watts: Logick.
(2) To happen at the same time.
II. Geom. : To fall upon the same apot:thus, if one triangle be applied to or placed upon another triangle equal to it, the painte of the one triangle are said to coincide with those of the other triangle and the sides with the sides.
I Crabb thas distinguishes hetween to coincide and to concur: "Coincide implles simply meeting at a point: concur rulsing towards a point ; the former seema to exclude the idea of design, the latter that of cliance: twn sides of different triangies coincide when they are applied to each other so as to fail on the same points; two powers concur when they both act so as to produce the same result." (Crabb: Eng. Synon.)
cō-in'-çi-dençe, * cō-in'-¢̧i-dẹn-̧̧̆, s. [Fr. coincidence, from Low Lat. coincilens, pr. par. of coincido.]
I. Lit. : The set or state of coinciding or falling together, or in the same joint or position.
IL. Figuratlvely:
8. The act of agreeing, corresponding, or being identical io nature or character.
"The very ooncurrenon and colnotdence of so many
ovidences. .
If With with
-The coinctience of the planes of this rotation wetch one nnother.
9. The state of happening at the same time as something else.
10. Anything which coincides, corresponds, or happens at the same time with another; a cnitheiding or corresponding combination of circumstances.
TI Crabb thas distinguishes between a coincidence and a concurrence of circumstances: "A coincidence of circumatances is aometling so striking and aingular that it can hardly be attributed to pure accident; a concurrence of circumstances, which seemed all to be formed to combine, is sometimes, notwithstanding, purely casual." (Crabb: Eng. Synon.)
ō-In'-gi-dẹnt, $\alpha_{0}$ \& e. [Fr. coincident, from Low Lat. coincidens $=$ falling together, pr. par. of coincido $=$ to fall together.]
A. As adjective:
I. Lit. : Cninciding; meeting or hlling together in the same point or position.

II. Figuratively:
11. Happening at the same time, coinciding with, concurrent.
*xed hy an artificial relation of the two colne beling Exed hy low near to, but scarcely ever oxactly coinThe ed. (1558) $\frac{1}{919}$.

+ cō-lăt'-1-tūde, s. [Pref. co = con, and latitude (q.v.). $]$ The complement of the latitude, or the difference between it and minety degrees.

* col'-a-türe. s. [Lat. colatus, pa. par. of colo $=$ to straln, to filter.]

1. The act or process of etraining or filtering ; colstion.
2. The matter etrained off or filtered.
3. A strainer or filter.
"The virtue theroof may be derived to it throuth e
colature of natural earth."- Fvelyn.
cōl'-bẽr-tinne, cōl'-bẽr-tēen, s. [From M. Colbert, superintendent of the Franch Royal lace mannfactiries in the seventsenth century.] A kind of lace.
"Instend of homeprun colfs were seen.
sroift: Bauch and Philemon, 140 .
 fsm. pl. adj. suff, -ke.]
Bot.: A tribe of Melanthaceæ, type Colchf$\operatorname{cum}(\mathrm{q} \cdot \mathrm{v}$.).
cðl'-chì-qēine, s. [Lat. colchio(um), e connective, sad Eng. \&c. suff. -ine.]
Chem. : $\mathrm{C}_{17} \mathrm{H}_{19} \mathrm{NO}_{5}$. An organic substance isomeric with colchicine, obtained by bolling colchicine with baryta water, or with diluto sulphuric scid. It is obtained in colouriess plates, melting at $155^{\circ}$, by recrystallisation from aicohol. Colchiceine is soloble in chloroform, alcohol and boiling water. Stroag nitric acid gives a yellow colour with colchiceine, which turns violet, then again yellow; if the violet solution is diluted with water sind soda added, an orange-red colour is produced; ferric chloride gives a green colour. Concentrated aulphuric acid dissolves colchiceine, forming an intenae yellow solution; by the addition of a drop of nitric acid it turns violet.
cri'-ghíçine, s. [Lat, colchio(un), sud Eng. suff. -ine (Chem.).]
Chem.: $\mathrm{C}_{17} \mathrm{H}_{19} \mathrm{NO}_{\mathrm{B}}$. An slkaloid which occura in all parts of the plant Colchicum autumnale. Colchiche is an anorphous yellowisb-white, bitter, very poisonous powder, which meltast $140^{\circ}$ and is soluhle in chloroform, water, and in alcohol ; when dissolved in dilute acids or alkalies, the solutions turn yellow. Tannia appears to be the best antidote to this poison. It gives a white precipitate with mercuric chloride.
col'-chìcuim, \& [Lat. colchicum; Gr. xо入x<kóv (zolchtkon). From the country anciently called Colchis, east of the Euxine (Black Sea) where it was said to grow abundantly.]
4. Bot.: A genua of plants, order Melan-

colchicust.

## $\begin{array}{ll}\text { 1. Plant in fower. } & \text { a. Styles and ovary } \\ \text { 2. Leavea and fruit. } & \text { 4. Silugio itrit. }\end{array}$ <br> 2. Leavea and fruit. 4. Singie fruit.

thacea. The perisuth is tubular, aud very long, rising from a spathe, the limb campanulate, 6 -partite, petaluid, the capsule 3 -celled, with the cells united at the base. C. autumnale. the Meadow Saffron (not to be confuaed with Crocus sativus, the saffiron of the dyy), is found in meadows and pastures. The leavesand fruit attract little sttention in spring when they are in perfection; both wither before the aummer is faradvanced. The flowers, on the contrary, which sre pale-purple, flourish fron August to October. To s superificial observer the plant looks a crocus, and in fact it has received the erroneous name of autumual received the erroneous name of autuminal
crocus; but it has six stamens, while the crocus; but it has gix stamens, while the
crocus genus has but three. The corms of the crocus genus has but three. The corms of the Meadow Safron ara poisonous, but much use
has been made of them in medicine. [Colchr has been made of them in
cum conm, Colchicine.]
2. Pharm. : For the pharmaceutical uses of the Meadow Saffron, see Colchicum cosm. Colohicum variegatum is found along the

[^152]Mediterranean. Its corms constituted the "hermodactyls" of the Arabs used to soothe pains in ths jolnts.

## oolchicum corm.

Pharm: Colchici cormus, the fresh corm of Colchicum autumnale, or Common Meadow Saffron, which ls collected about the end of June, and stripped of its coat, elliced transversely, snd dried at $150^{\circ}$ F. The fresh corm is about the size of a chestnut flattened where it has an undeveloped bud. The dried slices are abont o line thick, firm, fist, and amylaceous. The taste is bitter and acrid. Used to maks extract, su acetic extract, snd Vinum colchici. According to Garrod, Colchicun increases the flow of the bile, sud diminishes the beart's action; it possesses the power of controlling the pain sud inflammation power of controling the pain sud inflammation in cases of gout. Ths aeeds, Colchici semina,
are used to form a tincture which has the ssme are nsed to form \& tincture which has the ssme
medicinal properties. They are hard, reddish mrown, apherical seeds shout the aize of musbrown, aph

cold-finch, 3. (The first element is unexplainerl.) The Pied Flycatcher, Muscioapa atricapilla.
cold-hearted, a. Unfeeling, callous. "'. - : the coldhearted and scofling Grammout.
cold-heartedly, adv, [Eng. cold-hearted; ly.] In a cold-hearted, unfeeling manncr; callously.
cold-heartedness, $s$. The quality of being cold-hearted; callousness.
"cold-lind, a. Uniting coldness and kinduess. (Milton: Death of a Fair Infant.)
cold-pale, $a$. Cold and pale. (Shakesp.)

* cold-roast, * cold-roste, s. An expression naed figuratively for anything very poor or insignificant.
"A begerie littie toune of cold roste in the monn-
tainos of Sunoye"-Udal: Apopkcheg. Irammus, p . ${ }_{297}$ 297.
* celd-seeds, s. pl.

Old Pharm.: Seeda of variona Cucurbitacex, as the cucumber, the pumpkin, \&c

* cold-served, a.

1. Lit. : Served up cold.
2. Fig.: Dull, tedious, tiresome. (Young.)
cold-shorti; a. \& 2
A. As adjective:

Metal. : A term spplied to lrou which cannot be hammored la a cold state without breaking or cracking. The presence of a small quantity of phosphorus or silicon imparts this property to iron; also minute quantities of tin, antimony, or arsenic render iron cold-short.
"The arse which was pascd wie quite coldshore"
B. As substantive:

Founding: A void or seam in a casting occasioned by the too rapid congelation of the metal which failed to fill the mould perfectiy.
cold shoulder, s. A rebuff. (Oniy used in the phrase, To give a person the cold shoulder.)
cold-shut, a. A term meaning that a link is closed whils cold without welding.
cold-storage, s. Storage, in refrigeratIng chambers or any artificially cooled contrivance or building, of thinga damageable hy heat.

## cold-water, s. \& a

* Cold-water ordeal :
old Law: An ordeal by which a common peraon, accused of a crime, might have him guilt or innocence eatablished by ths simple process of tying a rope round him beneath his arms and plunging him foto deep water, If arms and plunging him into deep water If he sank he was deemed innocent and at once
pulled up, but if he floated it was manifest pulled up, but if he floated it was manifest that the water rejected him, which it was supposed it would not have done except he had been gullty.
Cold-water pump: A pump by which the condenser cistern is sapplied with cold water.
cold-wave, s. The progreesive moving of an area of low tomperature, genarally caused In ihis country hy an ontpour of cold dry air from British America; hence also called (in the Soath) a norther.
cold withont,s. A slang expression for a glass of spirits mixed with cold water, and without sugar.
cold-white, a. Of a cold-lookiog colomis like snow
oold, * calde, " colde, " kelde, * chelde, 8. [A.S. caldu, cealdu; 0. H. Ger. kalti; Icel. kaldi.] [CoLD, a.]
I. Ordinary Language:

1. Absence of beat or warmth; coldnese, coolness.
"As might affect the earth with coid and heat."
2. A sensation of sbsence of heat or warmth ; coldness, chlliness.
I Cold is aimply low temperature. It it produced by nocturnal snd other rsdiation, by the passage of a body from the solid to the liquid state, by evaporation, by the exyansion of gases, and by cbemical decomposition.
II. Med.: The populsr tern used to signify a condition of body characterised by olle or more of the following symptoms, viz., minning or discharge from tha eyes and nose with a sense of fulness and oppression of these larta; a feeling of rawuess or soreness of the throat with possibly some expectoration of mucus or nuco-purulent matter; some of mucus or muco-purulent matter; some difficuity of breathing and tightness of the chest, if the cold lias descended into the
windpipe and bronchial tubea, somes disrrioea, Windpipe and bronchial tubea, some disrrhoea, affected. Besides the foregoing symptems which rather indicate the Iocality of th malaly, there sre also wandering peins, more or less severe, about the body especiaily th back, loins, and legs ; the spirits are low snd depressed; there is either incapacity or un willingness to make sny exertion, and ebove all a general feeling, which cannot be well deflned, of being out of sorts, but which has received the anme of malsiae
cōld, colde, v.i. \& t. [A.S. dealdian.] [CoLo, a.]
A. Intransitive:
3. Lit.: To become or grow coid.
"Hwenne thi strengthe Fokoth, and ;thl noon
4. Fig. : To grow cold, to sink in apirt.
B. Trans. : To make cool or culd (lit. \&ff.)

tooldi－qn，v．t．\＆in．［Eng．oold，and suff．en．］ 1．Trans．：To cool，to maks cold．

Entomology：
I．Sing．（of both forms）：A coleopterous insect，a beetle．

2．Pl．（of the form coleopteran）：An English term for the order Coleoptera（q．v．）．
coll－ĕ－ठp＇－tẽr－a，a．pl．［Gr．колео́ттера（kole－ optera），nom．ph．of колеб́ттероs（koleopteros）＝ heath－winged ：колеоs（koleos），колєov（koleon $=$ a sheath，a scabberd，and $\pi r e p o{ }^{\circ}$（pteron）
 （petomai）$=$ to fiy．］
1．Entom．：The name given by Aristotle followed hy all modern naturalists，to a grea order of ansects，characteriser！by the pooses－ sion of＂sheathed wings．＂Of the four wings which the Coleoptera，likg the other more highly organtsed insects，as a rule posaess， the lower，i．e．the hinder pair，are membranous，
and so large that when not in use they require to be folded both longitudinally and trans－ to be folded both longitudinally and trans－ versely．The anterior winge，which are horny or leathery in textnre，are much smaller，and folding over the others，protect them as a aheath does the sword or other instrument which it contains ；hence the name Coleoptera （Sheath，or Sheathed－winge）．［See etym．］The head has mandibles which move horizontally for biting purposes．It posseaser in addition all ths accompaniments and appendages of a mandibnlate mouth．［Mannibolata．］The segtnents of the therax ara clearly separated， the prothorax bearing the first palr of legs， whilst the mesothorax and the metathorax （gee these words）sustain the two other pairs， with the elytra and wiags．The metsmorphosis is complete，the larva consisting generally of grubs with six genuine legs，and sometimes grubs wrolegs，the latter auggestive of the simi－ lar limbs in an ordinary caterpillar．The lar limbs in an ordinary caterpillar．The everything popularly called a beetle is not a coleopterous insect．［BLatтa，Соскяоасн．］
The Beetle order is，in the recent period，the most nnmerons ot any，it being believed thet not less than 100,000 epecies exitt；nor has it as yet been proved to have been other－ wise in geologic times．The basia of mont classifications of the Coleopters in that of Latreille，who mads his principle of divisien the apparent joints in the tarsi，the following being the sections，in ascending order ：－
Section I．Trimera ：Tarsi apparently with three joints．
Section II．Tetramera：Tarei apparently with four foints．
Section Ill．Heternnera：The first two pairs of tarsi with five joints，the remaining pair with four
Section 1V．Pentemera：All the tarsi with five joints．
Mr．Stephens divided them into six sec－ tione：（1）Adephaga，（2）Chilognathomorpha， （3）Helminthomorpha，（4）Aooplurimorpha， （5）Heteromera，（6）Brachelytra
Swaiason arranged them in five tribes，viz． Lamellicornes，Predatores，Malacodernes， Monilicornes，and Capricornes．
The Coleoptera pass into the Orthoptera by means of the Earwigs（Forffentidx），which hy eome are placed within the latter order，whilst Kirby and others elevated them into an order of their own，Dermapters（q．v．）．

2．Palcont．：The oldest known coleopterous insects are from the Carboniferous formation． They have been called Curculioidea［Cus－ culiol，and Troxites［Trox］，but whether the affinitiee thus suggested are correct is as yet doubtful．In the Liss and Oolite，beetlea are more numerous．Many also have been found in the Tertiary，chiefly in the Miocene aod Pliocene beds．（Nicholson．）

A. As substantive:

1. Med.: A disease of which the primary eest is apparently the colon, snd which is characterised by severe but remittent pain of the bowels with obstinate constipation, but unattended by fever. The abdominal pain is allayed by pressure, showing that it is not inflammatiou of the normal kind, this being, as a rule, increased by pressure. Vomiting is generally present, as is also flatus. Sydenham called the disesse belly-sche. It arises from various causes, specislly from spasm, obstruction, over-distension, or inverted action. Gne notable variety of it is known as Devonshire colic, painters' colic, and plumbera' colic. It arises from the action of lead on the humsn body. In medical Latin it is termed colica Pictonum, i.e. the colic of the Pictones, an old tribe existing in Romsn times near Poitfers or Poicton, where s severe epidemic of the form of colic produced by lesd once prevailed.
2. Anat. : Pertaining to the colon or large intestine.
IT There are an ileo-colic artery, s right colic artery, sad a middle colic artery.
B. As adj.: Of, pertaining to, or of the nature of, colic; affecting the bowels.
"In testine stone, and ulcer. colick pangg.".
colic-roots s. Aletris forinosa. A North American plant, order Hæmodoraceæ. It is intensely bitter, and being used sa a tonic and stomachic, may be held to produce a beneficisl effect in colic, whence ita name.
col'ric-al, a. [Eng. colic; -al.] The ssme as Colic, a . (q.v.).
"The oppreselon of calical pains."-Sivift: Carresp.

* cơl-1̌cked, o. [Eng. colick; -ed.] Griped; attacked with colic
of "A fulh meni of strong ment, in tender persong, goes off with the hurry and irritation of a purge, leariag
col'-1ck-y, a. [Eng. colick = calic; -y.] Pertaining to or suffering from colic.
"A Acolicky disarder, to which she is too sabject:"-
cŏ1-1-cō-děn' drǒn, s. [Gr. кwhexás (koflikos) $=$ suffering in the colon, and sévopov (dendron) $=$ a tree.]
Bot. : A genus of Cspparidacex, consisting of trees or shrubs, found in tropical America They have clnsters of flowers with fonr or flve petals, $8-20$ stamens, sad a long-stalked ovary. Msrtius says that Colicodendron Yeo is dangerous to mules and horses owing to the scrid principle which it contains.

Collugition appearod terrible, ..."-Continuation of Knoles, 1,478 r. (Latham)
cơl'-legè 2. [Fr. collège; Ital. collegio; Lat. collegium, front colligo $=$ to collect.]
A. Ordinary Language:
I. Literally
I. A collection, body, or commonity of persons, having certain rights and privileges, and devnted to certaio pursuits.

Gnther'd froun all the firmous colleges
Almost in Christendam.
Ienty PIII., tiL 2
2. A number or commuaity of persons iacorporated and living in society for the purposes of atudy or teaching.
3. The building or estsblishment io which anch persous reside.
"Hiz quiet observatory over the gnte of Trinity 4. Any building or establishment used for purposes of higher instruction.
-5. A course of lectures.
Being fixed at Utrecht for atydy, $\frac{1}{\text { had } t w o \text { or three }}$ corlepes of civill lsw under Vander 'Muyden."-Liso of Catams

* 6. 4 debtors' prison. (Slang.)
*II. Fig. : A number, assemblage, or swarm.
Thick as the college of the been in May.
B. Technically:
I. Old Roman Empire: Colleges in the aense A. I. 1 existed io Old Rome. A collegium was rometimes called also a corpus. [Conponate.]

2. Universities came into exiatence before colleges, and the original atate of things may still be seen in Scotland, where the immense mass of atudents reside where they like. The prsctice of living in common is oaly now beginning to creepin. Nevertheleas, the word college has long been used to that country in
conaection with the Universities, though in s vague sense. In Americs slso the words university and college are not well discrimi nated. In England, on the contrary, the two words are very precisely distinguished. It is thought that colleges first arose in connec tion with the University of Paris about A.D. 1140 or 1215, sad that irom Prsnce they spread to England. Mr. Mark Pattison was of opiaion that the motive aad design of college foundstions in connection with the English Univarsities may be divided chronologically into three periods. In the first of these-the 1sth century -themotive was purely academical. A college was an eleemosynary institute designed to col lect indigent students into a house snd provide lect indigent students intos house snd provide tended the university exercises. Of this type tended the university exercises. Of this type offer a pure specimen. In the second period, of which New College, Oxford, may be taken as the most developed form, the early motive is still preseat, hut the statutes now imply a rule of life. The collegea of this type are modelled ou the best pricedents of the monastic iastitutions, only that instead of making contemplation or evangelisatioa the motive for associatiag into z community, it is the cultivation of knowledge which is made the busiaess of life. In the third period, that of the Reasisaance, learning stands ont as the supreme ohject of the foundera. Of this type Corpus Christi, A.b. 1516, and Cardinal College, now Christi, A.D. 1516, and Cardiaal colege, now (Mark Pattison: Acad. Organisation, 1868.)
Till lately ail members of the two older English Universities were required to belong to a college; now there are number of studeats uosttached. Uaiversity College, King's College, \&c., ars affiliated to the London Uaiveraity, which, however, is an examiojag and nots teaching body; it therefore graats its degrees to anyone of merit enough to receive them, careless whether he obtained his knowledge at a college or not. Colleges for women have been recentiy built at severs Engiah and American Uaiversities.
A college consists first of a head, sometimes called by thst name, in other case designated a Provost, \& Master, a Rector, Prineipal, or a Warden. Next in dignity follow Fellows of the college snd Scholars of the college: generslly these are students as well. The tesching afforded by the colleges Oxford and Cambridge is provided by the Tutors, who appoint Lecturers with the sanction of the head of the College. The law of the college is that expressed in the will of the Founder, and some one geaerslly possessea visitatorial powers to see that such regula tions are carried ont.
Prior to the Reformstion the clergy regarded the colleges of Oxford, Cambridge, and other Uaiversities as clerical corporations; the right of visitation was therefore claimed by the ordinary of the diocese. Blackstons, however tates that now they are legally viewed as civil corporatione. In the United States Collegs is ften confuned with Cniversity, the titles being applied somewhat indiscriminately. The UniFersities of Harvard and Yale, for instance are commonly called Colleges, while many Colleges are entitled Uaiversities
IT College de Propaganda :
Ecclesiol.: A nsme sometimes given to what is more fully add accurately termed Congregatio Propazanda Fide, and popularly the Pro paganda (q.v.). (Mosheim : Ch. Hist., Index.)
College of Arms: [Herald's Colleoe.]
College of Cardinals. [See Cardinal.]
College of Doctors' Laws: The same as Doctors Commons.
College of Piety: [Trasaslation of Lat, Colegia Pietatis.]
Ch. Hist. : The English rendering of the nsine given to certain religious meetiaga, in vsrions reapects rebembling modern revival gatherings, stablished in the 17 th century by the Pictistic party in the Luthersn Chureh. (Mosheim.)
college-like, $a$. Of the nature of or resembling a college; managed like a college.

For private geaticnien and cudets there be divern

college-pudding, s. A kind of smsll plum-pudding.
colloge-youths, s. pl. A London society of bell-ringers, formerly confliaed to members of the universities. It dates back to the early
part of the 17 th century, sad is still the most fourishiag of bell-riaging societies. (Stainer \& Barrett, de.)
 a college or university. (Scotch.)

* ơl'-lĕge-nar, " cơ1'-lěg̀-in-õr, s. [Eng. college; suff. -ner.] A student at a college.

coll-1e'-si-al, a. [Low Lat. collegialis, from collegium.] Of or pertaining to college; collegiste.
"The eollegral corporationa had usurped the exclno
cơl-1é'-gi-an, s. [Fr. collegien.] 1. A member of a college.
"He has his warmth of sympathy with the fellow *2. An Inmste of $s$ debtors' prisou (Dickens: Little Dorrit, ch. vi.)
cơl-1ē'-gili-ans, cǒl-lē'-ǧ-ants, s. pl. [So named becsure when they met in assembly or convention, which they did twice s year, it was near Leyden Colleges.]
Ch. Hist.: A sect founded in Holland in A.D. 1619, by three brothera, John James, Hadrian and Giabart koddeus. They invited all to join them who desired improvement in acriptural knowledge and piety, without binding them down to any definite creed. When Socinianisu was proscribed in Poland and other parts of the Continent, its adherenta were obliged to join sects professing other teaeta, sad some became Collegiants. (Mosheim, dec.)
col-lē'sci-ate, a. \& s. [Lat. collegiatus, from ollegium.]
A. As adjective:

1. Of the nature of or contaioing $s$ college instituted or regulsted after the maner of college.
Prajicice the state of collegiate societien. . . ."-Heoker
2. Pertaiaing to or conaected with $\%$ coliege "a. ब A Collegiate Church:
(1) In England: One which, white not being a cathedrsl, nevertheless poasessea a college or chspter of dean, canons, and prebends. Such sre Westminster Abbey and St. George's Chapel, Windsor.
(2) In America \& Scotland: A church served by two or more clergymen jointly.

* Collective.

Conjolaed and collegiate."-Bacon: Esoay 39.
B. As substantive
I. A nember of a college; a collegian or university man.
" Rlgorone customs that forbid men to marry at eet times, and lo some places; me preutices, servant
legiates."-Burton : Anat. of Nelancholy. p . SB5.
2. An inmate of a debtors' priaon.
 fellow-couz
(Davica.)
corl-le'-ma, s. [Gr. кódia (kolla) $=$ glue, the apeeies being gelatinous.]

Bot. : A genus of lichens, the typical one of the order Collemsceæ (q.v.)
cơl-1ēm-ä'-ceč-m, 8. pl. [Mod. Lat. collema, and fem. pl adj. suff, -acere.]
Bot.: An order of lichens, proposed by Lindlcy, who coasidered that the lichensl alliance, geaerslly held to contsin only one order, should really be divided into three Graphidaceæ, Collemaceæ, at Parmeliacea [LICHENALES.] The clarscter givea of th Collemacese 18-Nuclena besring asci, thallus homogeneous, gelatinous, or cartilaginous. They have, he says, the thallus of ao alga and the fruit of a lichen.

* collemase, s. [Colmose.]
"A collemase Alcedo."-Cathol, Anglicum
cól-lèm'-bō1-a, s. yl. [Gr. кó $\lambda \lambda a(k o l l a)=$ glue, and $\dot{\epsilon} \mu \hat{\beta o \lambda \dot{\eta}}($ embol $\overline{\hat{e}})=\mathrm{s}$ throwing or puttiag in, so called because they have a pro ection or ma milla enabling them to attach or gine themselves to the body on which they are ataadiag.]
cite, făt, fiare, amidst, whãt, fâll, father; wë, wĕt, hëre, camel, hẽr, thêre; pine, pĭt, sīre, sīr, marine; gō, pot,

Zntom. A name proposed, in 1872, by Sir John Lubbock for ona of two orders into which he divlded the wingless tasects, calied by Latrelle, Thysanura. For the other order the latter name was retained. They have a the latter name was retained. They thave a semt-masticatory or suctorial mouth, the irst abdominal aegment rurnished with a ventral tabe or suctorial organ, the last abdominal segmeat but one with an spparatus for lesping. constitute small leaping insecta found in numbers when one ahakea a bough over a pocket-handkerchief, or aweeps buaher with s hand-net. Sir John Lubbock dividea the Col lembola into the following aix familiea : (1) Pa piriidx, (2) Smynthuridæ, (3) Degeeriadæ, (4) Poduridæ, (5) Lipuridæ, (6) Anouridæ, leaving under the restricted order Thysannara, the following three: (1) Japygide, (2) Campodeidæ, (3) Levismidæ : The Collemboia ara virtually (3) Lepismider. The Collembola are virtually Thysanura with Lepisma.
2. Paleont.: Sir John Lubbock believes that the Collembola very nearly present the originai form of insects, though he seems to agree with M. Brauer and Mr. Darwin that Campodea, which ia ranked not under the Collembela but under the Thysanura, was the original stock whence all insects aprung, the reason being that various organa are genera iized in it, which in the higher insects have become speciaiized, and the form of the little creature reappeara again and again smong the larvas of the higher insects. He has, there. fore, devoted a whole volume, with fine plates, fore, devoted a whole volume, with ine plates, Lubbock: Monograph of the Collembola and Thysanura; Ray Society, London, 1873.)
cơl-lĕín'-chy̆-ma, s. [Gr. кólıa (kolla) =

Bot. : The celiniar substance in which pollen is generated. The name was first giveo by Link.
cocl-lĕñ-chym'-a-toŭs, a. [Mod. Lat. collenchyma, $t$ conil., and Eng. suff. -ous.] Containing or pertaining to Colleachyma (q.v.).
p. "Collenchymatouncortical tissue."-Thomd: Botang p. 5.

* coule-pix'-ie, s. [Colle (etym. doubtful), and pixic (q.v.).] The Will o' the Wisp.

* col-ler, s. [Collar.]
* collerauch, s. [Colraith.]
* cǒl'-lẽr-ǐc, a. [Choleric.]
* cơl-1ĕr'-i-cal, a. [Eng. choleric;-al.] Choleric; aftlicted with choier.
* col-let (1), 8. [Acolyte.]
coll'-lăt (2), s. [Fr., irom Lat. collum $=$ the neck.]
I. Ord. Lang. : A collar or anything similar orr round the neck.
II. Technically:

1. Jewelry:
(1) The part of \& ring containing the bezel ln which the stone is set.
(2) The flat aurface which terminates the culasse or lower faceted portion of a brilliantcut diamond. 1 it is rometimea called the lower table or culet, and is one-fifth of the aize of the apper one. (Knight.)

Thou hadst been text set in the dukedom'a riag.

Revenger's Trag o. PL tr 318
2. Mach.: A small band of metal, as the ring which fastens the packing of a piston.
3. Bot.: The neck or line of junction be tween the root and the stem.
4. Gunn.: That part of a cannon which is between the astragai and the muzzle.
5. Glass-making: That part of the glass vessels which adheres to the instrument used for taking the glass from the melting pot.
collet de violon. [Fr.] The neck of a violin.

* col-let (3), s. [Collect, s.]
* chl'-1ert (t) s. [A corruption of colewort (q.v.).] Colewort.
cől-1ŏt-ër'-1-al, a. [Mod. Lat. colleteri(um), and Eng. adj. suff. -al.] Of or pertaining to the colleterium of insects.
col-lĕt-ör-i-um, s. [Mod. Lat.] An organ in the females of certain inaecta, containing a glutinoua aubstance which fastens the ors together.
coll-1ět'-ǐ- a, 8. [Named after Collet, a French botanist.]

Bot.: A genus of Rhamnacee, the species of whtch have sroail fascicled fowera and atrong apines. Colletia horrida and one or two more specles are known in British gardens.
cơl-lĕt'-ǐc, a. \& 8. [Lat. colletucus, from Gr.
 from ко入入áw (kollaō) = to glue, to cement, кóגло (kolla) $=$ glue, cement.]
A. As adj. : Aggiutinant.
B. As subst.: An agglutipant.
ơl-lět'i-inn, s. [From Mod. Lat. colleti(o), and auft. -in.]

Chem.: A crystallisable bitter substance obtained from Colletia spinosa, order Rham obtamed from coletia spinosa, order Rham-
aacea. An alcoholic tincture of this plant is used in Brazii as a remedy for intermittent fever.
cơl-lĭc'-u-lŭs, s. [Lat. colliculus $=$ a little hill, dinin. of Lat. collis $=$ a bill.]

Anat.: A aliglat eminence in any organ or part of an organ. Thus there are a colliculus bulbi urethroe, a colliculus seminalis, and a colliculus nervi optici. (Quain.)
cobl-li'de, v.i. [Lat. collido $=$ to clash or knock together: $c o l=\operatorname{con}=c u m=$ with, together locdo $=$ to strike.]

* A. Trans.: To dash or knock violently together; to bring into collision.
body..-" the outward beling strack or collided hy a solid
B. Intrans.: To dash or strike violently together ; to come into collision.
"Across this space the attractlon arges them. They
collide, they recoli, they oecllate." Tyndall: Prag. Science, ard ed., 12
cǒl'-lĭ-dine, s. [Gr. кód ${ }^{2} a(k o l l a)=$ glue, and eioos (eidos) $=$. . appearance, and Eng. \&c. suff. -ine (?)]
Chem. : $\mathrm{C}_{8} \mathrm{H}_{11} \mathrm{~N}$. An alkaloid which was round to occur in bone oit, in impure quiaoline obtained by dry distillation of quinine and in the naphtha ohtained by distillation of bituminous ahale, also by heating aqueous ammonia with ethylidene chloride, $\mathrm{CH}_{3} \cdot \mathrm{CHCl}_{2}$ it is isomeric with ethyl-phenylamine, di -methyl-phenylamine, and xylidene. Collidine is a colourless aromatle smelling oll which boils between $178^{\circ}$ and $180^{\circ}$. It is a strong base, and givea white fumes when a rod dipped in atrong HCi is held over it. It is insoluble In water, but soluble in alcollol, ether, and oils. The platinum salt is orange-yellow ( $\left.\mathrm{C}_{8} \mathrm{II}_{12} \mathrm{~N} \cdot \mathrm{HCl}\right)_{2}, \mathrm{PtCl}_{4}$. It is inaoluble in aleolol and ether.
cól-li'-díng, pr. par., a., \& s. [Collide.]
A. \&B. As pr. par. \& particip. adj. : (See the verl).
a". Coino loger rockling nnd swaylug, bint cinshing, ch. $1 i i$
C. As subst.: The act of coming into coljision.
cơl'-life, cơl'-1y̆, cŏ1'-lĕy, s. [Prob. aliied to 1r. cuilean, coilen $=$ a whelp.]

## 1. Literally

1. A general and sometimes a particular name for country curs. (Scotch.)

The tither was op ploughman's rollie.
Wha for his friend and comrmele hiad him
And in his freaks hai Luath cad him,
Aiter some dog in Highland sang.". Burns: The Twa Dogs.
2. A $\begin{gathered}\text { kind of } \\ \text { specially }\end{gathered}$ common in Scotland, kept principally by ahepcipally by ahepherds, and genefor aagacity.

* II. Fig.:

1. Auy one who follows another constantly, implicitly, or in the way of excessive
 admiration.
2. A loun
3. A lounger, one who hunts for a dinuer. (Jamieson.)
odl'-Me, v.t. \& i. [Collir, 8.]
A. Transitive:
4. To sbash, to put to silence tn an argament; in aliusiou to a dog, who, when mas. tered or affronted, walks off with hita tail between hia feet.
5. To domineer over.
6. Used, with a considerabie degree of obll quity, as signifying to entangle or bewilder.
"olliod the time that I had wou the Forkings, I gate
7. 
8. To wrangle, to quarrel with, as ahephards dogs do.
B, Intrans. : To yield in a contest, to knock under, to give way.
collie-shangie, s. A quarrel, a fight. She bade him sit dowa for a hard-headed loon
thet was aye hurlnglug biunsell and other folk finto collie -shanfies."-Scoott: (iuy Mannering, ch.exxlv.

* cơl'-ined, pa. par. or a. [Colle, v.] Black ened, darkened.

A. \& B. As pr. par. \& particip. adj. : (See the verb).
C. As subst. : The act of placing, sitnating. or stationing ; collocation.
cól-ló-ca'-tion, s. [Lat. collocatio, from colbeatus, pa. par, of colloco.] [Collocate, a.]

1. The act of placing, arranging, or disposIng in any position ; arrangement, disposition. 2. The stste of being arranged or disposed In any position; arrangement, relative position or connection.
"In the collocation of the eptrits is bodies, the collo

- enl-looks. col-lecik a [lled kolla.] A pot or bowl without feet, a large pail.

- efl-1t-oui-tion, s. [Lat. collocutio; from collocutus, pas par, of colloquor a to apeak together.] The act of opeaking, conversing, or conferring together; conversation, conference.
cðl-1ðe'-ఛ-torr, s. [Lat, from colloquor.] One who joins or takes part in a conversation or conference.
"Llowntion sae of the collocuctors in that dialogue."
 Convarsational ; in manner of a dialogue. "We procend to givg oar Imitation, Whith ho of the bin p. 18 (Daves.)
 II Colodio-chloride Process:
Photog.: A photographic printing process invented by Georga H. Simpson, editor of the Photographic News, sbout 1863. It consists in holding in auspension a precipitate of chlorida of silver in collodion, which is flowed upon glass or paper-in a manner aimilar to preparing a plate for the negative process-and dried in the dark. The sensitlve aurface so produced blackena on exposine to light, end will conseqnently give a picture under a photographic negative. An excess of free nitrate of eilver is negativa. An axcess of free nitrate of aiver is of citric acid and other organic aubatances is of citric acid and other orgamic aubatances is nsed to produce the desired tints. After ex(Knight, ©c.)

 (kolla) =gine ; elfos (cidos) $=$ form, appearance.)
Pharm.: Collodion is prepared by dissolving one onnce of pyroxylin in a mixtnre of thirtyounces of rectified epirit. The pyroxylin or gun-cotton used for making collodion is prepared by immaraing ona aunce of cotton wool in a mixtura of five fluid ounces of sulphoric acid, and five fluid ounces of nitric acid, for three minutes, then carefully weshing it with water, and drying it in a water beth; it must be kept in a well-corked bottle. It is used in photography; also in aurgery to form a prophotography; also in aurgery to form a protecting surface to the skin. Collodion ia a
colourjess very inflammsble liquid, which colourless very inflammsble liquid, which
dries quickly when exposed to the sir, lagvdries quickly when exposed to the air, lasv-
ing s thin transpsrent film insoluhie in water ing s thin transpsrent

## collodion-process, $s$.

Phot.: A procesa in photography invanted by Archer, who firat published an account of it in the Chenist for March, 1851. An iodized collodion is made by impregnating a solution of gun-cotton in ather, with a cmall quantity of lodide of potassinm or cadminm. A film of the fodized collodion is spread on the glass, which is then imnersed in a aolution of nitrate of ailver. Tha image is taken in the camera, developed by a weak taken in tha camera, developed of pyragallic acid and acetic scid, or Bolution of pyrogalice acid snd acetic scid, or
a solution of protosulphate of iron. Excess of a solution of protosulphate of irou. Excess of indide of ailver is removed by hypoaul phite of
eoda or cyanide of potassinm. Thia gives a soda or cyanide of potassinm. This gives a negative on prepared paper and exposing thein to light. (Knight, \&c.)
 Phot.: Ts prepare, as a plate, with collodion ; to treat with collodion.
cól-10'-dī-o-tȳpe, s. [Eng. collodio(n), and type (4.v.).]
Ploot. : A name applied to those processea in which a film of sensitized collodion is used on a plate io obtaining an inuage. In the wet cullodion process the plate is exposed while moist; in the dry collodion process the plate is first dried. The collodion positives are melanotypes sud smbrotypes; the images are formed on the collodion, so as to be viewed by refiected or transmitted light. Wheu viewed by reflected light they sre termed ambrotypes. Collodion negatives are ohtalned on a film of sensitized collodion on glass. (Knight.)

- coll-1ög've (ue sflent), v.t. \& t. [Proh. formed by a confusion of Lat. colloqwor, and Eng. oolleague.]
A. Trans. : To wheedle, to coax ; to addree coaxingly or flatteringly.
"They do apply thomeolve to the thmeen to He, di-. choty, P ant.
B. Intrans.: To converse or confer contdentially, especially with evil intentions; to plot, to scheme, to intrigue.

ctl-lög'-ǔing ( $u$ silent), pr. par,, a., \& s. [Colloour.]
A. $A \varepsilon$ pr. par.: (See the verb).
B. As adj: Wheedling, coaxing, flattering, intriguing.
wi..., here in the eolloywing Jow', Dontme, Do-
C. As subst. : Flsttery, deceit.
"Such lase fattery, parasitical lawning and colloguing. \&c. it wonld ask, an expert Vesallus to anatonixe overy member." - Burion : Anatomy of Helancholy
cð1-101d, a. \& s. [Gr. кблла (kolla)=glue: itoos (eidos) = sppearance.]
A. As ady.: Resambling or partaking of the nature of glue or jelly.

1. Chem.: A term applied to non-cryatslline bodies that are nuabla to pass through a wet memhrane. [Dialysis.]
2. Geot. : A terin applled to partly amorphous minerals. (Ogilvie.)
B. As substantive :

Chem. ( $p \mathrm{l}$. ): The name given by Grahsm to felly-like bodies which ara charscterised by a remarkable sluggiohnesa and indlsposition to diffusion, or to crystallization; when pare they sre nesrly tasteless. Tha chief organic colloids ara cellulose, gam, etarch, doxtrin, tannin, gelatin, albumen, and caramel. The following inorganic colloids are important: hydrated silica, hydrated oxides of iron, aluhydrater silica, hydrated oxides of iron, alumins, chrominm, \&c. Some in water, as gun; others, as hydrated aolubla in water, as guin; others, as hydrated
ailica and hydrated oxides of netala, can be ailica and hydrated oxides of metila, can
obtained in solution by dislysia (q.v.). Some collolds combins with water, as gelatin and tragacanth, which may be called water of gelstinization. Colloids in solution easily pass from the liquid to the gelatinona atate. Colloids readily permit the diffusion of crystalline salts through them, but are perfectly impervions to colloidsl substances like themselves, hence such anbstances afford an easy metbod of separsting crystalline suhstances from colloids, snd by mesins of dislysis, crystalline poisons sre readily separsterl from food, \&c. (Miller: Chemical Physics, \&c.)
colloid corpnscules. A nsme given to small cellular bodies existing in the brain normally, and also found in certain morbid producta of the body. (Ogilvie.)

## colloid exndation.

Anat. : The same as Collom matter (q.v.)

## colloid matter.

Anat. : A transpareut viscid yellowish atructureless, or alightly granular, matter, resembling liquid gelstive. It occurs as a normal and a pathological product in the hypertrophied heart, in tha hrain and spinal cord, \&c. (Griffih \& Henfrey.)
corl-1oid'-al, a. [Eng. colloid; -al.] Of, pertaining to, or partaking of, the nature of colloids.
côl-loid-ăl'-1-ty̆, s. [Eng. colloidal; -ity.] The quality of being colloidal, or of the nature of a colloid.
coll-1ó-mi'-a, s. [Gr. кó $\lambda_{\alpha}($ kolla $)=$ glue.] Bot. : A genus of planta, order Polemoniscea. The species are pretty, and very easily cultivated.
col'-lop, col-loppe, *ool-op. s. (Prob. connected with Ger. klopps $=$ a dish of ment made tender hy beating. Cf. Sw. kalops; 0 . SW. kollops =alices of beef atewed. Perhsps from Dut. kloppen = to knock; Ger. kloypen $=$ to heat; klopfe, kloppe $=$ a beating; klappen $=$ to clap, to strike.]

New herds of beasts he sends，the plalus to share；
New colonins of hirds，to people air．＂ iow colonips of hirds，to people air．＇
Dryden．lat Bk of Owid＇s Metamo
B．Technically ：
I．History
1．Phenician Colonies：Ere yet the Latio word existcd，or at least had scquired the meaning of colony，nations whose territory was too small for their population，geat forth some of their numbers to occupy other re gions．The great maritime nation of antiquity， the Phenicians，were also early colonisers， Tyre was called by Isaiah st the dauchisers Zudon，＂ch．xxiii．i2，hy which is meant that Tyre was originally a Sidonian colony．Tyre in turn founded varions settlementa，gueh ss Carthage，Gadea（Cadiz），aud others．
2．Grecian Colonies：Almost every Greck atate and tribe sent forth colonies；the whole west of Asia Minor and the adjacent 1 slands were studded with them，as was Southern
Italy；besides these，the Corinthians foude Italy；besides these，the Corinthians founded Syracuse in Sicily，and the Phocreane Blar－ seilles in Southern France．It is，however， worthy of remark that ko入wvia（kolonia），in Greek，primarily meant a grave，and not a colony，and when，in the Acts of the Apostles （xvi．12），it is used in the latter sense，it is only as a Greek method of writing the Roman word．
3．Roman Colonies：The Phenician and Greek colondes were small states iodepeadent of the mother country；the Roman colonies， however，were subject to the parent govern． ment．They were of two kinds－citizen or civil colonies，with a plongh upon their cnins， and military coloniea，with warlike enaigns on theirs．

4．Modern European Colonies：In founding colonies，as in so much more，Italy led the way，Pisa，Geaoa，and Venice haylng done so way，Pisa，Geaoa，and Veance haying done 80 lowed oext，the former in America，the Phi－ lippine Ialauda，\＆c，tha latter chiefly in the Fast Indies and in Brazil．Hotland aucceeded Portugal in the Esst Indies，and ocenpied the Cape of Good Hope，taken from it during the Napoleonic war．France hss been tufortunate in its colonies，many of which are now under the sway of the Englieh ruler．The British colonial enplre is the most masnificent tha world has ever seen or will see．New Engiand gettled by the Puritans，Penaaylvania by the Quakers，and Virgioia by the Cavailers became the aucleus of the great colony which，became tng independent in 1776 ，has developed into the United States，Low more populons by
some 30 millioon than the mother country，and occupying an area of about $3,556,650$ aquare miles．The Dominion of Canada，aggregated around the territory surreadered by the French in 1763，has an ares of sbout $3,620,510$ square milss，while the whole Brilish possessions in Americs have about 4，350，000．The area of Europe，on the other hand，is about 3，768，000 square miles．Australia，all of which is clatmed by Great Britain，le believed to have aboui 2，967，500 equare milles．Adding New Zesland and other gettlements In the Pacific，this is broaght up to about $3,181,344$ ．The area of the Cape Colony and the adjacent more or less settled territories is at leasi 240,110 square miles；the English African possessions shout 70，000．Guians in Sonth Americs has an are of about 100,000 equare milea．The Unitad States have no colonies，and hava avolded a colonial policy．
II．Law：Colonies were obtained（I）by conqueet，（2）by cession under treaty，（3）by occopancy，（4）or by hereditary descent．In the first two cases the colony retains its own lawe till they are altered by the Sovereign or Councll，suhordinate however to Parliament In the third case the colony，which is of the type called a plantation，is under anch Eoglish laws as are applicable to a community of this type．In the fourth case，the laws previously existing are io force till modified by Parlinment The larger colonies are now very nearly inde－ The larger colonies are now very nearly inde－ pendent．The Home authorities sppoint their
governors，but they have legislatures of their governors，but they have legislatures of their
own，which sometimes exert their power in taxing manufactiared goods imperted Foin the mother country，and they are encouraged to raise troops and trust to them for defence in ordinary emergencies．
III．Botany：A gronp of fungi or alge （generally unicellular），prodaced by diviaion from a parent cell，and forming gronps or chains．

IV．Zool．：An aggregate of individuals such as a polypidom；used generaliy of the Actinozoa，Fydroida，and Polyzona，but fre queutly employed of the social or compound Ascidiana，of which Botryllos and Clavellins are examples．［TUNICATA．］
V．Geol．：A phenomecon to whichattention was called hy M．Barranite，the emincnt Bolle mian pareontoiogist，and which las been de－ fined as the co－existence of two gencral faunas， Which considered in theirentirety are acverthe less diatinct．The Lower and Upper Silarian rocks have different assemblares of fossils．In examining LowerSilurian strataBarrande found that certain Upper Silurian fossils made their appearance in particalar beda，then vanished， then reappeared again some beds higher in the series，bui which atill were Lower Silurian． It is a canon of geology that no species which It is a cauon of geology that no species which again reintroduced．Barrande is therefore of opioion that an Upper Silnrian sea，with groups of characteristic fossils，existed in one part of Europe while a Lower Silurian one had not departed from Bohemia．Tha barrier between the two wss occasionally broken down to a partial extent，allowing the escape of a few species from the one to the other Further investigation has ahown that Bar－ rande＇s instances are fallacious，and due to inversions of strata．

## Aom, beharior, \&c.

## A. As substantive:

I. Ordinary Language:

## 1. Lierally:

(1) Any one of the prinaary ilnes seen in the spectrum, or a combination of a part or all of the same. [II. I.]
(2) That qnality of bodies by plrtue of which (hy ubsorbing certain raya of light and reflecting or emitting otherw) they present different
appearances in reapect of hue or tint to the eye.
(3) The complexion or bue of the face; the
sppearance of freahuess or blood in the face.
(4) The material plgments naed for coloring.
(5) Any tiot or hue, as distingaished from black or white; In botany, any hue except green.

## 2. Figuratively:

(1) A representation, character, or deacription; an outward cover or form.
". . to put false colore upon things, to eall good
(2) A pretence, an excuse, a false show or appearance, a subterfinge.
"Thys malice under the color of Justice in had." Goter, $i$. 62.
(3) An excuse or palliation of a fantt; a cover.
"Bnt yet we want a color for hls death"" Shakesp.: 2 Hen. Vi., IU. I.
(4) A character, a kind or species.
"Boyn and women are, for the most part, cattle of
his cojor." Shakesp. As Yous Like $I$, lii. 2 .

## - (5) The face.

(6) A color used as the badge of any party or side; as college colors. [11. 7 (2).]
(7) Applied euphemistically to members of those races of mankind whose skin is of a dark color; as people of color (negroes).

## II. Technically:

1. Optics: Culor in optics is viewed chlefly in connection with the solar spectrum. When the white line whicb reacber us from the sun passes trom one medium into another, the phenomenon of digpersion takes place, that is, the light is decomposed into several celors, They are generally stated to be seven in nnmber, viz., violet, indigo, blue, green, yellow, orange, and red. As these may be produced when light is transmitted through a prism, they are getaerally called priamatic colors. They are not all equally refrangible, the violet being the most sif and the orange the least. On the tbeory of Sir Isauc Newton, who was the first to decompose white light by the primm the first to decompose white light by the prism and again recompose it, hodies decompese hight also by reffection, and their coler depends on their reflecting power for the different simpie colors. Those which reflect all colorg in the proportion in which they exist in the spectrum are white; thoee which reflect nous are l, lack. Between these two limite there are inflnite nombers of tints, according to the greater or less extent to which bodies reflect some colors and absorb others. On this theory, or hypothesis, bodies have no color in themselves, but these are prodnced by the kind of light which they reflect. (Ganot.) Some colors are complementary to each other. [Complementasy.] A siaple color is one which cannet be decomposed.
2. Bot.: The tissue of plants is fir the most part colorless, of a silvery white, or an exceedingly pale yellow. The cause of the sult soquent color is the action of the eolar light which produce chlorophyll (q.v.). When no aboormal canses are present to alter its action, this makea the epidermis of every part of the plant, except that of the flower, green. When planta naturally green become variegated it is generally a disensed state, though capable of being transmitted to the posterity of the plant.
Tbe researchee of De Candillio have shown that there are two series of colors in planta, cyanic and a xanthic one. The former is called, by Schuibler and Firank, the oxidized meries, and the latter the deozidized one.

Under the cyanic meries of colors are to be ranked red, orange-red, orange-yellow, yellaw, yellow-green, then green, occurring specially in the louves of plents, stands as a connecting link between the twa serien, whilet under the xanthic series are to be placed blne-green, hlue, hlne-vlolet, violet-red, and red. [Cososing hattrir.] Prof. Dickle, of Aberdeen, has traced beantlifnl relations between form and color in the corollas of plents. [Corolla.]
Bischoff, Lindley, \&c., coneidered that thera are, in botanlcal terminology, eight principal colors, nuder which all atbers may be arranged -white, gray, black, brown, yellaw, green, blue, and red. For eubdivialons of these see the worde themeelves. Note, however, sbould
be taken of the fact that the adjective colored has a special botadical signification inconsietent with this arrangement. [COLORED, Bot.]
3. Painting: The coloring pigments need by painters.
4. Dyeing: Colors nsed In dyeing are of two kinds-adjective colors, thore which require the nee of a mordant, and substantive oolors, in which na mordant le reqnired.
6. Phren.: That faculty which is supposed to give the power of perceiving and appreciating colors and their various shades.
6. Music:
(1) A term variously employed in medieval treatiees on muaic to represent: a repetition of a sound in part music (rapetitio ejusdem rocis) ; parity of tone (pulchritudo soni) ; a movement of the voice from the part (floriflmatio vocie); an alteration of rhythm by different voices (idem sonus repetitus in tempore ent voicea (idem sonus repetitue in empore diverso a diversia vocibus); a discord parposely
introduced for the sake of variety (aliquando introduced for the sake of variety (aliquando
unae eorum ponitur in discordantiam propter unus eorum ponitur in discordantiam propter
calorem nusicæ). Some have gathered from calorem nusicæ): $\begin{gathered}\text { Some have gathered fron } \\ \text { the definition-" Repetitio diveraz vociz eat }\end{gathered}$ the definition-" Repetitio diveras vocis eat
idem souns repetitus is tempore diverso a dem souns repetitus in tempore diverso a
diversis vocibus," that a musical canon is meadt to be described.
(2) Now, the melodic, harmonic, and rhythmic effecte giving apecitic character to musical composition.
(3) The colored lines first used for the "purpose of readering neumes more intelligible. "Quamvis perfecta sit positura nenuarmm, ceca ombine eat et nihil vaiet gine adjunctione literarum vel colorum" (Guido). [Clef, Notation.]
7. Maitary:
*(1) The cognizance or insignia of a knight.
(2) The fiag, ensign, or atandard of an army, fleet, or regiment (only in the plural).
f The plural form is occasionally (and very questionally) used with a singular erticle,
"An author compares a raged coin to a tatered
ITo fear no colors: Properly a military expression-to fear no enemy; hence, to have ne fear.
"Cl. He that is Wett hanged in thls world, need
Sear no colorn."
Shakemp.: Twelfh Night, i. 5 .
8. Printing: Ink of any shade.
9. Law:
(1) An appearatrce or prima facie right, or appearance of title, furniehing a reasonable ground for action.
(2) A probable but really false plea, the design ot which was to draw the decision of the case from the jiry to the judge, by making the point so be decided to appear to be one of law and not of fact. (Ogivie.)

IT Color of effice:
Lane: An act unjustly done through the conntenance of an office, which is given as a colorable pretext for it wheu its real origin is corruption.

ICrabb thue discrimituates between color, hue, and tint: "Color fa here the generic term; hue and tint are but moden of color; the former of which expressea a faint or hexted color: the latter a shade of color. Betwixt the colors of black and brown, as of all other leading colorn, there are various hees and tints, by the dne intermixture of which natural objects are rendered beautiful." (Crabb: Eng. Synon.)
B. As adj.: (See the compounds).
color-bearer, s. One who carries the fiag or colors (of a regiment, \&c.).
color-blind, a. Affected with, or sufferlag from, color-hlindsess.
color-blindness, a. A pecnliar defect of elght in which tbose wha are affected aro incapable of diatinguishing differeat color. Some oee everythirg elther to be light or dark, Some eee everythicg elther to be light or dark, and have na concepliton of any other colors.
Thia condition fa, howover, happily rare. This condition is, however, happily rare. Others, agaln, cannat distinguleh either the
primary colory from each nther or from the secondery, confounding red with blue, blue with green, \&c. It is calculeted that ebout 4 per cent. of males and 5 per cent. of femoles of the people of tho Uniled Statea and Europe suffor from seme form of this defect. An English chemiat named Dalton, who suffered from color-blindness, was the first (1794) to draw attention to it, and bence the affection it frequently called Daltoniem. [Daltoniem.]
color-box,
colors, bruehes, \&c.; also, a vessel holuing the colors employed in printing calicees; a device for combining designated spectral colors in opecific proportion.
color-ohest, e. On shipboard, a receptacle for the varions signal fiags.
color-de-roy, s. [Fr. conleur de roy"in old time, purple; now the hright tawny" (Cotgrave).]

## A. $154 \mathrm{AD}, \mathrm{V}$, 18 .

## color-dootor,

(1) A roller of gun-metal or ateel pressed againat the face of the engraved roll tor calicoprinting, and receiving a tremulous motion to elightly abrade the copper aurface and enahle it to hold the color mere effectually.
(2) A sharp-edged ruler of gun-metal prosented at a tangent upon the engraved cylinder of the calico-printing machine. The doctor acts as a wiper to hold back eoperfiucus culor, and has a slight reclprocatíng motion in contact with the eurface of the cylinder. A lintdoctor on the other or delivery gide of the roller removes fibrea of cotton from the cylinder. [Ductor.]

## color-guard, s.

Military: A detachment whose duty it is to guard the colors. In the U. S. Army tbe regimental colur-gnard consists of one zergeant who ia the color-bearer, and two experienced soldiers selected by the colonel.
color-line, s. A distinction more or less closely drawn hetween the white nod black races as to social relatione, \&c. (U. S.)
color-man, s. One who preparee and deala in artista' colers, brughee, de. (English.)
color-plate, s. An engraved plate from which is printed one of the colers making up a combination in imitation of lithagraphy gederally produced by the balf-toue process.
color-printing, s. Printing by a anccession of colors, or by various colors occupying parts of the sheet. There sre various modes. One of the latest ia as foltows: The reds, yellows, and blues are eeparately photograjhed by a secret procest; from these negatives three plateo are made by the half-tone method, and platee are made fy the half-tone method, and
upon printing from tism successively the upon printing is reproduced in all its original hues subject is reproduced in all its original hues
by the blending of these three primary colors. by the blending of these
[Curomatic Pantina.].

## color-sergeant, 8

Milit.: The sergeant appointed to carry or guard the colors. [Color-guabo.]
color-top, s. A top painted in varions colors so as to show, in ite rotation, the effect of their combination.
color-wheel, s. A wheel constructed with diske bearing varions colors, which, bring rotated, displays the effect of combined colors,
ctl'-õr, cあi'-öur. * coloryn, * colo wren, v.l. \&i. [Color, 8.]
A. Transilive:
I. Ordinary Language:

1. Lit.: To give a new color, hoe, or tint to; to cause to assume any color or tiut; to change the color of; to tinge, to paint, to dye
2. Figuratively:
(1) To pailiate or excuse; to conceal.
"He colors the talsehood of Fincas by an express command from Juptter to forsate the queen."Dryden: Dedication to Aneid.

（2）To make pleusible or specious．
We have ecarce hearid of an inaurrection that was aot colored with grievano
（3）To dress op or present nuder fair colors or appearances．
reports，or to tinfluenoes nur be permitted to color onr reports，or to influenoe nur asceptace of reports of
occarrencea in external oalare．＂$-T y n d a l l$ ：Frag．of Science（ 3 rid ed．），iil． 48.
（4）To modify in tode or character；as，one＇b opinions are colored by his environments．
＊II．Old English dare：
rTo color a stranger＇s goods：To allow a foreigner to enter goods at the custom－house in a freemsn＇s name，oo that the foreigner pays but single daty，when he ought to pay double．（Phillips．）
B．Iutransitive：
1．To assume a Dew color；to become colored．
2．To blush（ofted followed hy the adverh up）．

## cあl＇－ör－a－ble，a．［Eng．color；－able．］

1．That may be colored．
2．Specions，plausible；spparedt and not real． 3．Appearing just and true，but not yet so
© Crabh thus distinguishes between colorable， specious，plausible，feasible，and ostensible：＂What is colorable has an aspect or face upon it that lulls suspicion and affords satisfaction；what io specious has a fair outgide when contrasted with that which it may possibly conceal ；what as ostersible 18 that which presents such an appesrance as may serve for an indication of something real；what is plausible is that which meets the understanding merely through the ear；that which is feasible recommends itself from its intrinsic value rather then from any represeutation given of it．A pretence is color－ able when it has the color of truth impressed upon it；it is specious when its fallacy is easily discernible through the thin guise it wears ；o motive is ostensible which is the one soonest to be discovered；an excuse is plausible when the well－connected narrative of the maker im－ presses a belief of its justice；an account is feasible which contains jothing improbable or singular．＂（Crabb：Eng．Synon．）
－A colorable alleration：
Common las：：One made fur the purpose of waling a law．It is used chiefly in connection with the law of copyright．
col orr－a－bil＇ colorable．
 －ness．］The quality of being colorable；plans－ ibledess，speciouspess．
 In a colorable or specious mander；plausibly， specionsly；apparently and not really．

Geog．：A territory of the United States which was separated from Utah and Kaneas and organized as a distinct territory io 1861. It was admitted as a State in 1876 ．Its capital is Denver．Colorado is one of the moet im－ portant mining States in the Uoion，producing both gold and silver in large and increasing quantities．

## Colorado－beetle，：

Entom．：A beetle first described by Thomas Eay，in 1824，from specimens found by him near the Upper Missouri．He called it Iory－ phora decemlineata．The genus Doryphora had bhora decemineata．The gebus Doryphora had been previously founded by llliger．It comes
from $\mathbf{G}$ ．$\delta$ ．$\delta$ opu $\phi$ ópos（doruphoros）
si spear－bear－ from（Ar．ofopu申ópos（doruphoros）$\Rightarrow$ spear－bear－
ing．the reference being to the fact that in ing．the reference being to the fact that in
these insects the mesosternum is advanced to these insects the mesosternum is advanced to
a point like a horn．The gedus is American， a point like a horo．The gepus is Americsn， and is placed under the Chrysomelide．The larva of the species distin－ guished as deceminineata feeds creedily on the potato，an having sttracted notice in Colorado for ite rayages among the crops of that esculent in the territory，it moved eastward year by year， till in 1874 it had reached the Atlantic sea－board．Between

colomado－ seetle． 1874 and 1876 Cansds was ravaged．It is deatroyed by dusting the plants with Parig green，which method has proved offective that comparatively little damage ienow done by thie pest．［Potato－quo．］

Colossian (as Có-lơsh'-an) (1), a. de. (Eng. \& Lat. Colosse; Lat. Colosse, Colossad. Gr, Kodoarai (Kolossai), Koda $\sigma \sigma a i$ (Kolassai) (see def.); $i$ connective ; ouff. -an.]
A. As adj. : Pertaining to Colosse or Coloseai, a city or town oa the Lycus, a tributary of the Meander. It was in the immediate vicinity of Laodicea and Hierapolis. In the first ceuturyof the Christian era it was decliaing as the two other cities rose.
B. An subst.: An inhabitant of Colonse. (Used generally in the plural.)

II Epistle to the Colossians :
Scripture Canon: An epistle addressed by St. Paul to the Church of Colosse. Its genvineness and authenticity are amply anpported by quotations from it in the writiags ported by quotations from it in the writiags tullian, besides alluaiona to it by Jubtin tullan, besides allusions to it by Juktin Martyr and Theophilus of Antioch. Moat
modern critics are in its favour, the chief exceptions being Mayerhoff and Baur. The epistle was written probabiy at Rowe, in or near the yesr A.D. 62, though aome have thought it was penned earlicr, and at Cæaares. Tha Church at Colosse eeems to have had ss its founder Epaphras, a native of the place (Col. i. 7, iv. 12, 13), who is probably a different person from the Epaphroditus of Philip. ii. 25. Epaphras having carried Panlat Roni intelligence regarding the state of the Colossian Church (i. 8), Paul lenned the preseat epistlc, despatching it by the hands of Tychicus (iv. 7,8 ), who carried also with him that to the E, 8), who carried siso with him that to the Ephesisns (Eph. vi 21). Onesimus st the same time was returning with a message to is master, Philemon, who lived at Colosse (Phllem. 10, Col. iv. 9). There is a atriking resemblance between many passages in the epistle to the Coiossians and that to the Epheiane, but there are differences too. The epistle to the Colossians appears to have been penned first, and that to the Ephesiaas a few dsye later.
The Colossian Chorch seems to have been mainly Gentile (i. 25-27, ii. 11-13, iti. 5-7), but at the time when the apostle wrote it was tronbled by converts from Judaisin, who songht to impose the yoke of ceremonial observance on their Gentile brethren (ii. $10-$ 17), in addition to which doctrines were ad vocated by the same or by other individusls regarding angeis aad such supernatural boings, in which may be diacerned the germ of gnos
ticism (ii 18-23). There opiniona St. Paul
earneotly combata, contending for Chrnetian liberty and for the supreme dignity of Christ. According to Ensehilus, Colosse was destroyed hy sn earthquake the year allcceeding that in which this opistle was written.

- Colosalan (as Cb-1\%nh'-an) (2), a. t o. [From Lat. colossus (q.v.) ; i connectlve, and Eng. enf. -an.1
A. As adj.: Pertalning to a colosous, colorgean.
B. As subst. : A native of Rhodes, the island on which the celebrated colossus atood.
 and Eng. auff. ic.]

1. Lit.: Coloesal, gigantic, atupendous.
"Yet differ not from thone eolonick athtoes."
2. Fig. : Exceeding great.
"To your colostic grentrens."
Pily, iv. 1 б1-б8-8ŏch'-ex-1ys, s. [Lat. colossus; Gr. kodogros (kolossos) $=$ a colossua, and Lat. chelys; Gr. $\mathrm{X}^{\text {id }} \mathrm{\lambda} \mathrm{~s}$ (chelus) $=\mathrm{a}$ tortoise.]
Paloront.: A genus of Testndinidæ (Land Tortoises), fonnded on the Colossochelys Atlas, a gigantic बpecies, the remsine of which were found by Dr. Falconer and Sir Proby Csutley in the Upper Miocene (?) or Pliocene (?) deposite of the Sewalik hills of the Sub-himapayan rance ia lndia It is believed to have been twelve to fourteea feet long, and perhaps urvived to the humea period.
col-бs'-sŭs (pl. colossi snd oolossuses), a. [Lat., from Gr. колoб⿱㇒日́s (kolossos).] A atatue of gigantic aize, especially spplied to etatine of Apollo, said to have been of eo gigantic a size that its legs extended across the mouth of the harbour at Rhodes, sud that ahips could aail between them. It was coaajdered one of the sevea wonders of the world

- Cas. Why, man, he doth beatride the narrow world,

Shakesp, : Julius Cotar, i 2
" colossus-wise, adv. Like a colobsus, with legs stretched out, astride.

col-б̊'-trŭm, s. [Lat. $\dagger$ colostrum, colostra.]

1. Physiol.: The flrst liquid secreted by the mammary glands. The milk of msmmalia secreted in the first few days after parturition, before the access of milk fever. It differs from ordinary milk by containing a larger amount of solid constituents, sad ls rge quantities of fat, casein, and milk sugar.
2. Chemistry, de. : A mixture of turpentine with the yolk of an egg.
 (1) the boacm, (2) the bosom-like fold of a garment; ëyxvá (enchuma) $=$ an infusion.]
Bot. : Tissue composed of wavy or aipuone cella. It occurs in the epidermis of some planta. [Parenchyma.]

- coll'-phĕg, v.t. [Appar. a corruption of colophize (q.v.).] To box, to cudgel.

## 1. Anatomy:

(1) Humar Anat. : [Columella cochlefe]
(2) Compar. Anat.: The bone of the ear present in eeveral Amphibia and most Sauropsida, which anowers to the atapes in Mammalla. (Huxley.)
2. Zoology:
(1) (Conchol.): The central pillar around which a spiral ehell is wound. (Onsen.)
(2) Of Actinozoa or Corals: The central axis or pillar found in the centre of the visceral chamber of many corals. It is an axial rodlike structure.
3. Botany:
(1) The axis, where anch exists, from which the valves separate in a dehiscent fruit. (Lindley.)
(2) The axis over which the spore cases of some ferns, such as Trichomanes, are arranged. (Treas. of Bot.)
(3) The axis ocenpying the centre of a sporangium in the fructification of a moss. (Lindley.) something similar is found in a few Hepaticæ.
(4) A central pillar or projection within the aporangium of Aucor sod some similar fungals.

## columella cochlem.

Anat.: The central pillar or axds around which the tube and lamins of the ear apirally turn. It is called also the modiolns.
$\dagger$ cǒl-un-měl'-lar, a. [Lat. columell(a), and Eng. suff. -ar.] of or pertaining to the uvula or columella.
cǒl-u-měl'-1 Lucius Junius Jioderstus Columella, a celebrated Spanish writer on agriculture, born s.c. 42.]

Bot.: A genus of epigynous exogens, the typical and only one of the order Colnmelliaceæ (q.v.).
 coiumellia (q.v.), and fem. pl. adj. suff. -aceos.] Bot.: Columelliads, au order of Cinchonal Exogens, with epipetalous stamens, sinuous sathers burstiag longitudinslly, and unsymmetrical flowera. Only genus, Columellia; species three, from Mexico and Peru. They have yellow flowera, seesile to the dichotomies of the branches.
coll-u-mel'-li-ads, s. pl. [Mod. Lat. columellia (q.v.), and Eng. pl. axff. -ads.]

Bot.: The Eaglish book-name given by Lindley and others to the order Columelliaceæ (q.v.).
† cơl-u-mð̌1-1Y-form, a. [Lat. columella $=$ a liftle pillar, and forma $=$ form, shnpe.] Having the shape or form of a columella or littie column.
cǒl'-ŭmn ( $n$ silent), s. \& a. [Lat. columna $=$ a column, a pllar; Fr. colonne: Itsl. colonne; Sp. \& Port. coluna, columna.]
A. As substantive:
I. Ordinary Languaga:

1. Lit.: In the same seose as II. 1.
"Some of the old Greek columns and aitars were Peacham.
2. Fig. : Anything resembling or supposed to rescmble a column, in pressiag vertically on its base.

Oi both angel, who, at lant, in alght
Oi both mpyarents, all is fannes ascended
As in a fiery colurnn charioting
"The whole weitht Hillon: Samson Agonistes. "The Whole woight of any column of the atmo
II. Technically:

1. Arch. : A pillar, shaft, or solid body of considerahly greater leagth than thickness, standing upright, and generally sarving to support soms superincombent mass. It is the principal part in tha ancient onders of architecture. There are five orders of architecture, each having its own proper atyle of column. [Architecture.] The Grecian-Doric has no base,and in some nther respecta differs from the Ronan-Doric, which is an imitation
of it. 'It was short, poworful, and manive and very aimple in character. Its height was between seven and eight diameters. The Ionic column eas distiuguished by its volutus, and was nine diameters In height. The Corinthian, which wsa ten diametera high, was adorned with leaves, \&c., and was noted for ita lightnese and richnese of decoration of thightnesa and richness of decoration. Or these the Doric and Ionic were the earilest The Corinthian was preferred by the Romana. The parts of a column are: (1) the plinth, (2) the torus, (3) the shaft, (4) the astragal, (5) the neck, (6) the ovato, (r) the abacus (see these words). Above these rose the entableture.
2. Anat.: The name given to various pillar-
 bodily frame of the bodily frame. Thus the posterior vesicular column is the name given by Clarke to a compact group of large cells occupying the inner lialf of the cervix in the posterior cornu in the spinal cord. (Quain.)

IT Column is the English rendering of col umna, and columns of columnce, which are used as anatomical terms. [Colvmasa, Colusinti.]
3. Zoology:
(1) The cylindrical body of a Sea-anemone.
(2) The jointod stem or peduncle of a stalked crinnid. The axis of a crinoid which, when the fieshy envelope is removed, separates into a multitude of joints or pieces.
4. Bot.: A colld body into which the filamenta in some plants, such as Stapelia, Stylldium, and Ratlesis, are combined. In the Orchids, Richard called the column a gynostemium. (Lindley.)
5. Military :
(1) A body of troops in deep files and narrow front, opposed to line, which is extended in front and thin in depth.
(2) A body of troons, irrespective of the manner of formatiou.
"Bat the clan. deprived of the leader whom it adored, and aware that he had withdrawh himseli in which hard a few days before kept no well the vow to erle or to conquer. - Hacaulay: Hik Bng., ch. xili
6. Neutical: (See extract).
"A column manas any nomber of ships in a dintinct
group, whether in line ahead, alreast or otherwise. group, whether in line -hhead, alreast or otherwhee. shipe A column in said to be me line ahead of each other. A column in shipe are in one lue ahead of each other. A columnin
sald to be in lloe alireast when the ohijs are ranged in one live abeem of each othere"- Manval of Naval Evolutions; Defln., pp. an-1. (1874.)
7. Printing, Writing, dc.: A perpendicular act of lines separated from another set by a line or blank space; as, A column of print, a column of flgures, se.
8. Distilling: A vessel contaiaing a vertical series of chambers used in stills for continuous distillation.. (Knight.)
9. Calico-printing: The name of a certain description of steom apparatus by which steam is applied to cloths topically treated with a mixture of dye-extracts and mordants, In order to fix the colours. (Knight.)
B. As adj. : (See the compounds).
column-lathe, s. A dentist's or watchmaker's lathe on a vertical extensible post to accommodate an operator in a sittiug or atanding posture. (Knight.)
column-like, a. Like or resembling $s$ column.
column-orders, s. pl.
Archit.: An epithet applied to the Doric, Ionic, and Corinthian orders of architecture, from the important part filled in them by the different styles of columns.

## column-rule, s.

Printing: The name given to pieces of brass of different thicknesses, made type-high, and of to sed to sarate columns of type.
cól-ŭm'-nạ (pl. obl-ŭm'-næ), \& [Lat.]

1. Arch.: $A$ column (q.v.).
2. Anat., \&c. : Applied to various parts of the body, which more or lass resemble a colluma in ghape or appearance. [CoLoms, A. IL. 2, Anat.]
0.1-7̆m'-nse, s, pl. [Lat. = columns, pl. of columna (q.v.).]

Anat.: Various columasr or pillar-shaped structures. Thus there are Columne Bertini, Columne carnere, Columnee rectl, and Columnes rugarum.
columnze carnese, s. pl. [Lat. $=$ fleshy columus.]

Anat. : Certain mascular hundles connected with the ventricles of the heart. (Quain.) vestricles hy ne one sort of columne carnoas in the Todd \& Botman: Phytiok. Anat., vol Li, ch. vii., p .
cól-ŭm'-nal, a. [Eng. column; -al.] Colomnar, like a column.
' No crag overhanging, nor columnal rock."
obl-ŭm'-nar, a. [Lat. columnaris, from columna.]

1. Ordinary Language
(1) Shsped or formed like s coloma, formed in columas.
(2) Pertaining to a column or columns.
"White columnar spar, ont of a atone-pit."-Woodward: on Fossila
2. Bot., oc. : Resembling a column in form, as the combined stamens of most Mslvscere.
cǒl-ŭm-пӓr'-1-an, a. [Lat. columnari(s), sud Eng. auff. -an.] The same as Columnar (q.v.).
col-ŭm'-nar-ish, a. [Eng. columnar; -ish.] Shsped somewbat like a column.

- cobl-ŭm-năr-i-ty̆, s. [Lat. columnar(is), and Eng. saff. -ity.] The quality of being columnar.
©ot-ŭm'-nĕ-a, s. [Named sfter Fsbius Columna, of the noble family of Colonas io 1taly.]
Bot.: A genas of plants, order Gesneraceæ, tribe Gesnerex. The flowers of Columnea scandens, a species which grows in the West jadies, hut has been introduced into British Indies, hut has been introduced into British
greenhouses, secrete a large qusatity of greenhouses, secrete a large qusatity of honey:
† coll'-ŭmned ( $n$ silent), a. [Eag. column; ed.]

1. Furnished or adorned with columns.

- The gorges, opening wide apart, reveal

2. Divided into columns. Tennyson: EEnone
† cól-ŭm-nǐ- $\overline{\mathbf{a}}$ 'tion, s. [Lat. column $(a)$; iconnective ; add Eng. suff. -ation.]
Arch.: The employment or arraggement of columus in a design. (Gwill.)
cơl-ŭm-nif'sèr-es, s. pl. [Lat. columna=a colmmn, sud fero $=$ to bear.]

Bot: : An order in the nstural system of Linneus as distinguished from his srtificial one. He incluted under it most Mallowworts, also Camellia, Meatzelia, \&c.
col-ŭm-niff'-ẽr-oŭs, $a_{n}$ [COLUMN1FERE.]
Bot. : Having the filsments of the stameas anited into a columo, ss in the Mallows.
col-ŭm'-nụ-las, s. [Lat. columnella, dim. of columnu $=$ s columo.] A little column, used esp. id anstomy.
$\dagger$ cō-lüre', s. [Lat. coluri, pl. ; Gr. кódovon (kolouroi) (see def.), kȯdovpos (kolouras) = dock-tailed, stump-tailed, truncated; *ódos $($ kolos $)=$ docked, stunted, ovóá $($ oura $)=$ tail.] Astronomy :

1. Sing.: One of the two colures [2.], viz., the equinoctial colure, the aolatitial colure.
2. Pl.: Two great circles passing through the equipoctial points snd cutting each other at right angles at the polles. The term colure, which was used by the ancients, beiag unnecessary, is not much employed.
cō'-lŭs, s. [Gr. кóגos (kolos) $=$ an unknown quadruped.]

Zool. : A lapsed synonym of Saroa (q.v.).
cō-lū'tĕ-a, s. [Class. Lat colutea; Gr. колочтéa (koloutea) $=$ a pod-bearing tree mentioned by Theophrastus.]
Bot.: A genos of Papilionsceous planta, eub-tribe Galegese. Colutea arborescens is the Bladder Senua, the leaves of which are ased
for adulterating the blunt-leaved Senns of the druggists.

* col-ver, s. [Culver.]
cobl-vil'-lĕ-a, s. [Named after Sir Charlea Colville, formerly Governor of the Mauritius.]
Bot. : A genus of leguninous trees, suborder Casalpiaiex. Colvillea racemosa is a spleudid tree forty or fifty feet high, with scarlet flowera, a native of Madagascar.
cot'-y̆, s. [CoLin]
coll-y-di'-ǐ-dæ, s. pl. [Mod. Lat. colydium (q.v.), and fem. pl. adj. suff. -idoe.] Entom. : A family of Pentamerons Beetles.
col-y'-dǐ-ŭm, s. [The form seems that of a diminutive. Agassiz considers the root to be Gr. колео́s $($ koleos $)=$ a sheath.]

Entom.: A genus of beetles, the typical one of the family Colydidre. Oue apecies is Britisb, Colydlum clongaium.
 bétês) = a diver, a a wimmer.]
Enfom. : A genus of wster-beetles, family Dytiscidæ. Eight species are found in Britain.
obl-y̆m'-bil-dse, s. pl. [Mod. Lat, colymbus, and fem. pl. adj. suff. -idec.]

Ornith. : A fsmily of Pygopodes (q.v.). The besk is aomewhst long, conical, and pointed. There is aometimes a crest on the head, the wings are ahort, and the hinder toe is distinct. The feet are placed far back, so thst the hird hss to atand erect. Most sre msriue; others frequent estuaries, and even fresh water, especially in severe weather. The family sometimes includes the Grebes, but is more gederaliy restricted to the genus Colymbus (q.v.).
 and fem. pl. adj. auff. -ince.]

Ornith.: A sub-family of birds, the typical one of the family Colymbidæ.
côl-y̆m'-bŭs, 3. [Gr. ко́入ıцßаs (kolumbös) $=$ a diver, a swiramer.]
Ornith.: A genus of birds, the typical one

colvmbus.
of the fanily Colymbidx. Colymbus glacialis is the dorthern diver or loon.
cơl'-zą, s. [Fr.] Brassica Napus, var. oleifcra. colza oll, s. Oil from its seeds. Used for burning m lamps.
corm-, pref. in compos. [Lat. cum $=$ with.] The form sssumed by the Latin prefix before words heginning with $b, p$, or $m$, and sometimes before $f$. [Co, Con.]

* com, 8. [Come.] A coming, an arrival, an advent.
"Bysyd he that swete home.

*om pret of
cō'-ma (1), s. [Gr. кヘ̂ua (köma) = deep slumber; кoumaw $($ koimã $)=$ to lull or hush to aleep, to put to sleep; cognste with кеїца (keimai) $=$ to lie, to lie ontstretched.]
Met.: A morbid state which, if considered a distinct disease, is a milder form of apoplexy but which may be properly regarded as a symptom rather thsi an idiopathic affection. it is characterised by a morbid condition of
the hrain, prodaciag loss of sensation snd voluntary motion, so that the patient seens as If in a deep aleep. It conatitutes the most pronounced atate of terpor which can occur, the anccession being as follows: When a patient is ao overcome by lassitude that he tends perpetually to eleep, is incapable of mascular exertion, sad cannot, except when excited, give attention to what is pasaing around, his atate is called lethargy; when a mechanical atimnlua, sach as that of pricking or pinching him, will reatore him to partial consciousness, if is carus; when not even this will rouse him, it ja coma. The cerebral fuoctions are suspeoded in coma, and the nervous and sanguiferous aystems deranged. There are two well-marked types of it, one in There are two well-marked types of it, one in
which the pulse is oppressed, irregular, and which the pulse is oppressed, irreguar, and
slow ; and the other in which it is atrong, with ; a hot akin and other marks of febrile inflammation. When coma is intease it passes into apoplexy (q.v.).
 the offuslon of some other forelgn matter, prevente aimilar consent of action, and than gives riso to the metions arr deastroyed or waspended. "Todd 4 Bowe man: Physto. A nat., voi L, ch. il., p . $\mathbf{3} 66$.
có'-ma. (2), 2. [Lat. $=$ hair, foliage, grass.] 1. Astronomy :
(1) Gen.: Anytbing more or lesa hsir-like. [Coma Berenices.]
(2) Spec.: A certsin hair-like appearauce seed surrounding the nucleus, considered as the head, of a comet when the apectator stands between lt and the sun.

2. Botany:
(1) The assemblage of branches constitating the head of a forest tree.
(2) A series of empty bracta terminating the inflorescence of some planta.
(3) The tuft of hairs terminating certain seeda as, for example, the long hairs collected about the extremity of the cotton and some other planta. These isve been sometimes improperly called the pappus. [Comose.]
3. Micros.: The hlarred sppearance rouad the edgea of an object, due to apherical elierration.

Coma Berenices, s. [Berenice's mair.]
cō'mal (1), a. [Eag. coma (1); -al.]
Med.: Proceeding from, or pertaining to coma (q.v.).
cö'mal (2), a. [Eng. coma (2); -al.] Hairlike.

- cō-mart', s. [? Pref. co = con, and mart (q.v.). More probably a misprint for cov'nant, which is the resding found in the first folio.] A truaty or Rgreement.

And carriage of the articlos denign dam,i. 1
cơm'-ar-ŭm, s. [From Lat. comaron; Gr. конароs (komaros) $=$ the strawberry-tree (Arbutus unedo).]

Bot. : An old genus of plants belonging to the order Rosacea or Roseworts, snd now absorbed in Potentilla (q.v.) [Marsh CinqueFOML.]
$\mathbf{c o}^{\prime}-\mathbf{m a ̄ t c}, a$. [Lat. comatus $=$ hsiry, pa. par. of como $=$ to cover with hsir ; comb $=$ hsir.]

1. Surrounded by coma; haviag a hairy appendsge like a tail.
"How comate, crinite, candate ntara are fram"d."
2. Bot. : Comose (q.v.).
3. Entom.: Covered, more or Jess, on the upper surface with long flexible hsirs.
cō-māte', s. [Pref. $c o=c o n$, snd mate (q.v.)] A companion, associste, or partuer; a fellowmate.
"And thy name atrongor?-I6 Olinthus, the comate in tho rrison, wa the trinl."-sir
Days of Pumpeit. bk. L. cle $x v i$
cō'-ma-tōse, cō'-ma-toŭs, a. [Fr. comateux; Lat. coma; Gr. кйна (kòma) = sleep, lethargy.] [Coms (1), s.] ln a state of, or pertaining to, coma; lethargic, droway.
"Onr hest eastor is from Russin; the great and prin cipal use
cŏm-ăt'-n-la, s. [Lat. comatulus = having hair neatly or luxuriantly curled; dimin. of comatus = hairy ; coma = hair.]
[^155]Zook: A genua of Echinnderms, the typical one of the fsmily Comatulidxe. One apecies, Comatula (or Anledon) rosea, ia fonnd in the Britiah seas. Its young ere no unlike the mature aninal that they were placed in a diamanct family and called Pentacrinus europaus.
et-măti-n-ǐd, s, [Comatulide.] Any individual of the Comatulidee (q.v.).
 and fem. pl. adj. auff. -idce.]

1. Zool.: A family of Echinoderms, order Crinoides. They are called Hair-atars and Feather-atars. They are fixed by a atalk when young, but are free when of mature age, differing in thia respect from the Encrinidæ or Sealiliea, which were attached by stalks at every period of their exiatence. They have both the mouth and anos on the lower or ventral sarface, posaesa ten alender arma and alenderjointed cirri, ensbling them to creep sbout at the bottom of the aea. species have been found in mont parts of the worid. [Comatula.]
2. Paleont.: Free Crinoids, like the modern Comatnife, appear first apparentiy in the Jurassic rocks.
com-aund, "com-awnd, " com-awndyn, s. \& v. [Command.]

A. As substantive:

1. Ordinury Language:
2. A toothed inatrument used for separsting, arraoging, or dreasing the hair; also sn ornamental toothed contrivance used by ornamenta for keeping the hair in its place when ladies for
dreased.
"Apd fair Ligea'a goldea comb,
Wherewsth ahe aita on diannood rocks,
Bloeking her soft allurlug lockn."
Mitton : Comus, 380-2.
3. The top or crest of a bird, especislly of a cock.

Combe or other lyke of hyrdya "-Prompl. Parv.
"High was liss comb, and coral.red withal," Dryden: The cock and Fox

* 3. The crest or top of a wsve.

4. A ridge of earth or land, sn embankment.

5. The waxen hexagonal cavities in which bees lodge their honey.

A coomb of houy."- Wyclife: Luke xilv. ${ }^{29}$
.. whe the bee dhukesp.: 2 Hen. $I^{\prime}$., iv. 4. IT The comb of a bee is composed, as stated sbove, of hexsgonsl cells, of which there are two ticrs, the cells in which are placed end to end, so that the three plates of wax, which scrve ss the bottom of the cell in the one tier, constitute also the top of the corresponding one in the other. The mathemstical problen in " maxims and minims," how to construct the greateat number of cells within the smallest possibls room, and with the least expenditurs of material, is solved. This the natural theologians and the older ustarslists were sccustomed to adduce, ss one of an infinite number of proofs, that design and s Designer were displayed in bature. [Desion.]
II. Technically:

1. Nisut. : A sinsll piece of timber under the lower part of the beak-heard, for the fore-tack to be haulen to-in some veasels, inatead of a bumkin: it has the same use in bringing the fore-tack on board that the chess-iree has to the insiu tack. (Smyth.)
2. Milit.: The projecting piece on the top of the cock of a gun-lock which affords the of the cock of a gun-lock which affords
the thumb a convenient hold for drawing it
back.
3. Wool-dressiag, ©c.
(1) A rake,shaped implement, consisting of a head with two or three rows of tapering steel teeth, the rows being of different iengths. The tool is used in combing long-stapled wool for worsted goods. The combs are used in pairs. Short-stapled wool ta carded.
(2) The serrated doffing-knife which removes the fleece from the doffing-cylinder of a carding-machine. (Knight.)
4. Hat making: The former on which a fleece of itbre is taken up and hardened into a bat. Probably from cone, the usuai ahape. (Knight.)
5. Mechanies:
(I) A steel tool with teeth corresponding to those of a acrew, snd used for chasing screwa on work which is rotated in a lathe. [Chaser.]
(2) The notched acale of a wire-micrometer.
B. As adj.: (See the compounds).

IT Compounds of obvious signiffeation : Comb-ase, comb-maker, comb-making.
comb-broach, s. The tooth of a comb, with which wool is dressed.

## comb-brush, s.

1. Lit.: A brush for cleaning combs.
*2, Fig.: A ladiea'maid.

comb-cutter, s. One who makea combs.
Comb-cutter's saw: Usually a double saw, in which two blades are affixed to one stock, one projecting beyond the other, and the ieas salient acting as a apacer to atart the next kerf. Another comb-cntter's saw has an adjuatable alip, which acts as a gauge for depth of kerf. [Comb-gaw.]

* comb-feat, s. 4 thrashing or beating. -Come hither, I most show thee a pew trick, and handsomely glve thee the comb-jeat." ${ }^{\text {P }}$ Urquthart:
comb-frame, s. A four-square removable frame like a slste-frsme, placed in a hive to be filled with honeycomb. (Knight.)
comb-pot, s. A stove at which the combs are warmed in the operation of preparing long. stapled wool for worsted.
comb-saw, s. The hand-baw of the comb-cutter is called a stadda, snd has two blades, one deeper than the other; s gauge on the saw-ulsde determines the depth of cut. Some of the aaws are serrsted on esch edge. The blades are made of thick steel, snd are ground away on the edges as thin as the notches of the comb. They have about twenty points to the inch. Between the blades is a thin slip or tongue of metal, called a languet, which determines and preserves the interval, (Knight.)

## comb-shaped, $a$

Bot.: Pectinste, pinnatifid, but with the segmenta very numerous, close, snd narrow, like the tooth of a comb. Exsmple, the leaf of Lavandula dentata.
cômb (3), coomb (2), s. [A.S. cumb (?) (Bosworth). A corruption of Fr . comble $=(\mathrm{s}$.) s heaping, (a.) heaped vp, quite fuli : from Lst. cumulatus, pa par. of cumulo $=$ to heap up. (Skeat.) ${ }^{\text {an }}$ A dry measure containing four bushels.
"Io the fourteenth centory, Sir Joha Culluma observes a harvestumn bad forpeoce a doy, which enabled him to buy a comb of wheat; but to buy a twelve daya Hallam: Fieos of the State of Europe
comb (4), s. [Colmie.] A coal-fish of the fifth year. (Scotch.)
comb (b silent), * kembe, * kemo, * kemya, v.t. \& $i$. [A.S. cemban; Icel. kember; U. H. Ger. chempen; M. H. Ger. kemben, kemmen.] [Сомв (2), s.]

## A. Ordinary Language:

## I. Literally:

1. The act or process of combining or vuiting two or more substances or bodies.

- Resolatiou of conurpound bodies hy Are doee not
 combinations"-Baylo.

2. The state or condition of being combined; union, commixture.

Prom the moment of thalr first combination,
3. The result of the act or process of combining; a combined body or mass.
4. A union, association, or league of persons or states for a certain purpose; a confederacy (generally used in a bad sense, as a cabal).
"Rome, by her warlike polices, wan porpotundy exposlng herself to nerrous reverses to rindicitiventatacke and to formideble combinations of injurod noighbours.', 4. p 47.
II. Figuratively

1. The act or proceas of combining ideas in the mind.

They never anffer any ideas to be jelned in their puderituldilugs, in ally ot ther or stronger combination than "hat thair own nature aud correopondence glve
2. The atate or condition of being mentally
combined or associated. combined or asaociated.
"Ingratitnde in alwayi in combination with pride

## B. Techaically

I. Arith., Algebra, \&c.: The different collections which may be made of certain given tions which may be made of certain given quantities without regard it the order in The term is almost always mentioncd in conThe term is almosi always mentioncd in conjunction with permutationa in which there is department of arithmetic ls technically called Permutations and Combinations. If $a, b$ and $c$ be three quantities to be takeu two together, there will be three possible combinations, that is, whys of arranging them in pairs, without allowing $b$ to stand before a, or $c$ before the two letters which precede it in the alphabet. These combinations wili be ab, $a c$, and bc. But there can be aix permutations of the same three lettera; i.e., six distinct pairs of them if permission be granted to put pairs in them order one pleases, viz., ab, ba, $a c, ~ c a, b c$, ch. [Permutation.]
2. Chem.: The act of uniting by means of chemical affinity ; the state of being so united. There are two kinds of chemical consbination, that by weight and that hy volume, In a large number of instancea the law relating to combination by weight is as follows:-When two bodies, $\mathbf{A}$ and $\mathbf{B}$, are capahie of nuiting, the several quantities of $\mathbf{B}$, which combine with a given or coustant quantity of $A$, stand to otue atoother in very simple ration. Murtiple (Chem.), Equivalent, Atomic.] With regard to gases combining by volume, the law is that the contbining volumes of all elementary gases the conbining volumes of all elementary gases srsenic, whicb are only balf those of the other elements in the gaseous state, and those of marcury and cadmiun, which are double those of the other elements. (Founes.)
nation" wa bave then what ta ralled a chemical ermbi-
3. Law: A term defined as an "assombly of workmen met to perpetrste unlawful acta." From the time of Edward I., the law attenipted From the time of Edwarl I, the law atteninted
to reguiste the price of labonr, and prohilit to reguiste the price of lisionr, and prohinit
the workmen from conbining. By $2 d 3$ Edw. the workmen from convining. By $2 d 3$ Edw. severely punishahle. These laws were repealed in 1825. Still, most of the objects nimed al ly workmen's combinations were held to bo in "restraint of trade," and theretiure illegal, but at present trade noiona are considered legitimata combinations, even it their nction should in soy casa ba deemed in restraint of trade. Interference with the freedom of action of those workmen who do nut join them is not permitted; in all other respects thay ara frea. Simibar restrabing laws here early passed in the C'nited states; but they hava beeo repealed, and workinen ara quite fres to combine. The only restriction is against vinleace.

- Cr bb thus discriminates between ormbinotion, conspiracy, cobal, and plot: "An association for a had purpose is the Idea common to ali these terms, and pernliar to combination. A combination may he either secret or oipn, but secrecy forms a necessary part io the
gigniffication of the other terms; a cabal is wecret as to ita end; a plot and comopiracy ars secret, both as to the means and the ead. Combination is the close adhereuce of many for their mutual defeuce in oftaining of demands, or resisting of claims. A eabol is the futrigue of a party or faction, formed by cunning practices in order to give a turn to the course of things to its own advantuge: the natural and ruling idea in cabal is that of ly with address. A plot is a esindeatine union of eome persons for the purpose of uischiof : the ruling idea in a plot is chat of a compltthe ruling idea in a plot is that of a complicated enterprise formed in secret, by two or
brore persons. A conspiracy is a general inteloiore persons. A conspiracy is a general intel-
figence among peraons nnited in sevtiment to figence among peraons nited in sevtiment to effect some surious change: the ruling and nsturai ides in this word is that of nnanimity and concert in the prosecution of a plan. A combination is seldorn of so eerious a naturn as a cabal, or a plot, though alwsys objection (Crabb: Eng. Synon.)

## combination-attachment, $s$.

Sewing-machine: A device to be attachad to the aewing-macbine proper, and by which two or more distinct classes of work may be performed, auch as marking, foiding and creasing a tuck; a guide, hemmer, corder, and quilter.
combination-fuse, s. A fuse combin ing the priociplea of time and percussion so that if the time-fuse fails to explode the shell after the proper interval, the percussion arter the proper interval, the percussion strikes. (Knight.)

## combination laws, s. pl

Law: Laws relating to combinations of mastere and workmen [Coscbination, B. 8.]

## combination pedal, $s$

Music: A pedal acting upon the wind supply instead of upon the draw-stops of an organ.
combination-room, ह. The room in which the fellows of the different colleges in the University of Cambridge meet after dinner for dessert and conversation. It cor respronds to the common-room of Oxford and Dublio.
cǒm-bǐ-nà'-tion-al, a. [Eng, combination; al.] Pertaining to combinstion.

## combinational tone.

Music: A third tone produced when two musical notes are sounded together. It is called also the grave harmonic and the differential tone. (Rossiter.)
cơm'-bin-ā-tive, a. [Formed as if from Lato Lat. combinatious, from combino. 1 Tend. ing to or spt to combine. (Brit. Crit.)
cơm-bīn-ä-tǒr-乌̆, a. [Formed as if from a Lat combinatorius.] The same as CombnnaTiva ( $\mathrm{q}, \mathrm{v}$.).

the cors aud the freight together. - Knolies : price of the cors aud the freight togetiner." $-K$ noites :
rast. Turks
(iv) To become.
"Trust me, I am execedigg, weary,-IE it come to
that ?"
(v) To reach s certain state or condition.

His sons come to hooour, and be knoweth it not.
$-J o b$ xiv. 21 .

* (vi) To agree, to comply, to consent.

What la thla, if my parson will uot come to swift.
(vii) To revive, to recover oneself.
(2) Naut.: To tarn the head of the ship nesrer the wind.
29. To come to blows: To fsll ont, to fight.
30. To come to the front : To come forward.
31. To come to grief: To meet with misfortune.
32. To come to the hammer: To be sold by unction.
33. To come to hand: To be received.
34. To come to life: To revive, to come to.
35. To come to light: To be discovered.
36. To come to nature:

Metallurgy (of the properly malleable iron): To separate from the unmslleable snd impnre mass of ore with which it was in combinstion. (Percy, in Weale.)
37. To come to oneself: To recover one's senses; to revive, either mentally or physically.
38. To come to pass: To hsppen, to fsll out.
39. To come to the point: To address oneself to the matter in haod, with circumlocution.
40. To come to the scratch: To engsge any enemy or oustscla.
4J. To come to a standstill: To stop.
42. To come to terms: To agree on terms or conditions, to sccord.
43. To come to an understanuling: To enter into so agreement
44, To come up:
(1) Lit. : To move from a lower to a higher place or position.
(2) Figuratively:

* (a) To be promoted.
(b) To approsch, to come close to.
(c) To shoot up, to spring ny.
"Over-wet, at sowing-time, with us hreedeth much
dearth, insomuch as the corn niever cometh $u$."
* (d) To become public or fashionsble
(e) To be brought forwsrd, to arise; ss, The question came up.

45. To come up to:
(1) To approach, to come to one's side
(2) To amount to, to approach.
"He prepares for $a$ survender, nsserting that all these will not come up to near the quentity requlsite.'
46. To come up with: To overtake.
47. To come upon: To invade, to attack, to fall on, to befsll, to come to
If To come: In futurity; to happen heresfter.

My waves shall wash "Ine walla of nighity Rome."

- Come your ways: A vulgarism still in use, especially in the north of Englsed: come along or coms hither.

come-down, s. A fall or sbesement.
"Thet was rather a come-down."-Reade: Cloituer and Hearth, ch. HiL.
* come-off, s. A means of escape
come-outer, s. One who comes out or withdraws from a regulsr church or other organisation nnder the pretence of its belug corrupt; a radical reformer.
"I am Ohriatian man of the sect cellod Oome

oŏm'-ěd-y̆, *'cŏm'-měd-y̆, s. [Fr. comédie;
 $\kappa \bar{\omega} \mu \circ s(k o \overline{m o s})=$ a bsnquet, s féstal procession, and $\varphi \dot{\delta} \dot{\eta} \dot{\prime}(\bar{o} d \bar{e})=\mathrm{sn}$ ode, a song.] A dramstio representation of a light and amusing nature, in which are satirised pleasantly the weaknesses or msnners of society snd the ludicrous incidents of life.
"Here was commedy, a eous of gentes firste ifounde."
"I have not attempted anything of an partoral comedy, becanue, Ithink. the taste of our ago will rot
relish A poem of that sort. $"-$ Pope : Letter 80 . Crom.

T Comedy took its origin in the Dionysisn festivals, with those who led the phsllic songs of the bsind of revellers ( $\kappa \hat{\omega} \mu \mathrm{o}$ ) who, st the vintage festivsls, gsve expression to the exuberant joy snd merriment by parading about, dressed up, and singing jovial songs in honour of Dionysus. These songs were frequently interspersed with extemporised jokes at tha expense of the bystanders. Comedy first assumed \& regular shape smongst the Dorans. The first sttempts at it amongst the Athenians were made by Susarion, a native of Megara sbout b.c. 578. Epicharmus first gave comedy s new form snd introduced a regular plot. That brsnch of the Attic drama known as the oud Comely begins properly with Cratinns. oid comely begins properly with Cratinns.
It lasted from B.c. 458 to B.c. 404 . The later it issted from s.c. pieces of Aristophan belong to Middle Comedy. $^{2}$ The chorns in s comedy consisied of twenty four. [Chorus.] Midale Comedy lssted from B.c. 404 to $\mathrm{B} \mathrm{C}$.340 , and the New Comedy till B.c. 280. Middle Comedy found its msterisls in satirising classes of people instead of individusls. New Comedy snswers to the comedy
of the preseat day. The most distinguished of Roman comic writers were Plautus and Terence, whose plota were mainly derived from their Greek predecessors.

1. Astronomy
(1) Definition: A Iuminoua heavenly body which, in general, conaiats of a nucleus or "head" with, or less frequently without, a tail, the whole moving in the heavens, first towards, then arnund, and fiually away, again
from the aun, like a planet at one part of ith liptic orbit.
(2) Hist. : Oomets bave in every age excited atteation, end, till recently, have inspilred terror, at least in ignorant minds. Milton ex pressed the genarsi beliai in the linea :-

osephus enomerstea matton: P. L. IL To
 star resemhling a aword which atood over the city, and a comot that continued over the year." (Vars of the Jews, bk. vi., ch. v., year.
§.)

From these notions science had to grope ita way forward. Aristotle thought comets ig neous vapours not higher than our own atmoephere. Seneca gave forth the bappy hypothesis that they were a kiad of planeta Tycho Braha, about 15 in , showed that a cer tain comet was at a greater diatance from the earth than the moon. Hevelius in 1668 ascertained that the orbit of a comet was con cave and not a atraight line, the latter erroneous view having beea held by Tycho Brsbe already mentioned, and Kepler. Doerfel (1681) believed comets to move in parabolas. In 1632, Halley proved the conret, subsequenthy called after hira, to be periodic in its returns called after hira, to be periodic in its returns. In 1704, Sir Isaac Newton proved cometa to
obey the law of gravitation, and held that in obey the law of gravitation, and held that in
all probability they moved in elliptio orbits. all probability they moved in elliptian
For more nodern discoveries, see 3 .
(3) Present state of knowiedge and opinion: More than 600 cometa, according to Mr. Hind, have been taken note of, but about 17,500,000 are believed to exist in connexion with the solar ayatem. The liead or nucleus is much lesa solid than it aeems. Thus, in 1832, Sir John Herschel saw a group of atars only of the 16th magnitude, almost throngh the centre the Bilh magnitude, almost throngh the centre
of Biela'a couet. When auch a body might be expected to exarcize gravitation ita iofluenco he expected to exarcize gravitation ita infuence
is too small to be perceptible. Reganting orhit, the cometa may be dirided into two very distinct classes : First, those whose orbita are so long that they are usually regarded as parabolas, and secoad, thnee whose orhit and period are both ahort. Of the latter class, about twelve or fifteen are known. The firal aeern to have come to na from outside apace; the second set, originally belonging to the former, to have had their direction chamged ao as to produce their preaent ahort elliptio orbits by the action on them of some planet. (Brit. Assoc. Rep. (1879), p. 272.) For the chief comets of the latter type, see of at the ead of comets of the latter type, see at the ead of
this article. la 1866, Professor Schisparelli, of Milan, diacovered that the orbit of Tuttle's comet, the third which had appeared in 1862, was nearly identical with that of the August meteors, and Tempel'a comet, the first of 1866, wilh that of the November meteor atream. In consequence of this discovery, Prof. P. G. Tait, F.R.S.E., published the view that the andden development of tails many millions of niles in length, the occurrence of comets with many tails, and tha observed fact that there is no deffnita relation of direction between a comet's tall and lto solar radins vector, may be accounted for on the supposition that a comet ia a clond of anial masres, auch as stones and frazments of meteoric iron, shining by reflected light aloue except where these masses impinge on each other, or on other rastter circulating around the sun, and thus produce luminous pases slong with considerable modificationa of their relative motion. The differencea of motion of the meteoric fragments relatively to the earth. present appearances analogoua to those of a tlock of sea-birds flying in one plane, and only becoming as a long streak when the plane of the flock passes approximately through the spectator's eye. The so callad envelopea surronnding them are compared with the curling wreaths of tobacco smoke emitted from a pipe. On the 24 th June, 1881, Win. Huggins, Esq. D.C.L, LL.D. F.R.S., examined the oright comet then in the aky with the apectrocope Assuning this to be similarly corn posed to other comets, he came to the conclu aion that part of their light is reflected sunlight and part nriginal light, and further that carbon is present in the cometary matter. The comet of 1882 was abown to contsin oodium aud iron, in addition to carboo.

It Among the best known periodic cornets
(1) Biela's Comet : [Named after M. Biela, an

[^156]Austrian officer, whn discovered it at Prague on the 27 th or 28 th February, 1826.] A comet which has a periodic tme of about of yeara or 138 weeks. It returned in September, 1832 , or 138 wreeks. It returned in 1839, then in 1845 ; when, between again in 1839, then in 1845; when, between
December 19, 1845, and January 13, 1846, it meparated into two comets, which went off in conpany, coming back together in 1852, aince which time they have returned no more. Bnt It has been diacovered that when, towarda the end of Novernber, the earth interaecta the lust doubie comet's path, there is a display of meteors. This was notably seen on Nov. 30, 1867, and on Nov. 27, 1872. Bielsis is called also Gambart'a Comet.
(2) Donati's Comet: [Named after Dr Donati of Florence.] A comet discovered by Donati on 2nd June, 1858. Periodic time abont 2,000 years
(3) Encke's Comat: [Nemed after Johano Frauz Encke, Director of the Observatory at Berlin.] A comet, the periodicity of which was detected by Encke in 1819. Ha proved it identical with Mechain and Messier's comet of 1786, with Herschei's of 1795, and Poos's of 1805. It appeared again in 1822, 1828, and at such intervals as to show that its periodic time ia 3.29 yeara, or 1,210 days. A perioasc time ia recent appearance was on August 20, 1881. recent appearance was on August 20,181 .
Ita orbit is everywhere nearer the sun than that of Jupiter.
(4) Halley's Comet: [Named after the celebrated Edmond Halley, the friend of Newton. and, from 1720 to $1741-2$, Astronomer-royal.] A comet, the tirst whoae periodic time was ascertained. It is abont 75 years. It was Identical with the cometa of 1456,1531 , and 1607, and appeared again in 1759 and 1835. It ia next dua in 1910. It is sometimea calied Apian'a Comet.
2. The name of en old geme of cards.
"What say you to $\bullet$ ponle at comet at my boune 1"
comet-ninder, $s$.
Astron. Instru.: A comet-Beeker (q.v.).
comet-like, adv. Like or in the same manner as a comet.

B. Technically:
3. Commerce:
(1) Definition: When the word is used with an extended meaning, it signifies mutual exchange, buying and selling whether abroad or at home; but in a more specific or limited sense it denotes intercourse or transsctions of the character now described with foreign patiors or with the colonies ; mutnal exchange or buying and aeiling at home being designated not commerce but trade.
(2) Hist.: The Phenicians, whose primitive geat was at Sidon and their next at Tyre, were the great commercisl nation of the old world. Tyre was called "the crowning city whose inerchants are princes, whose traffickera are the honourable of the earth." (Isa. xxiii. 8.) How varied were the articles in which they traded, a chapter of Ezekiel, of peculiar historic value, tells (Ezek. xxvii). It was written about 583 8.c. The Greeks with all their intellect, and the Romans with their unparslleled opportunities, did not show remarkable aptitude for commerce, nor was their success high. In the middle ages, the Venetians, the Pisans, the Genoese, the Hanse or Hanseatic towns and Flanders, either successively or in some cases two or more together, took the lead in commerce. The great impulse communicated by the discovery of America brought first the Spaniards and Portuguese, then the Dutch, and finslly the British upon the scene. Even hefore this time London had become a large emporium of trade. William Fitz Stephens, speaking of the traffic in the reign of Henry 11., says :-

## Arabian gold, Babea's spice and fucense; Sey thian keen weapous, nod the oil of yalm <br> Prom Bahylonts deep soil; Nile surecious geing, <br> China' bright shiming silks, and Gallic wilies, Xorway warm peltry, and the Russian sables, <br> fll here abound.

The tranquil sud economic reign of Queen before the ibth en impulse to commerce, and before the loth century had closed, the English1 merce of Ritssia; they explored the sea of mprce of Russia; they explored the sea of Spaitzbergen for a passage to the markets took an active part in the trade of East; they took an active part in the trade of
the Nediterranean, and they excited the jeatousy of the Hanse Towne by their operations in Germany and the continent of Europe. Other cities than London were now engaging in foreign trade, the merchants of Bristol doing 50 with the Canary lslands, and those of Plymonth with the coasts of Guinea and Brazil. Our traffic with India created the Anglo-Indian empire, and it again favourably reacted on the commerce which had given it birth.
(3) Modern Commerce: In the United States an enormous comnerce has developed, conducted largely through the port of New York, and to a considerable extent through those of Boston, Philadelphis, Baltimore, and others.
lt is made up in somewhat eimilar proportiona
of articles exported and imported. Prof, Leone Levl, in hle "Hietory of Britioh Commerce," expresses the view that the foundatione of moders British Commerce were laid deeply modern British Commerce were haid deeply and auccossfilly between the end of the eeven years war (1763) and the depth of (1792). The mechonical skill of Revolution (1792). The mechonical skill of
Lewis Paul, Lawrence Earnshaw, Hargreaves, Ark wright, and Crompton, innproved the cotton maohinery and gave the manufacturing supre insey to Britsin. This giving an article to seli abroad, enabled much that was useful to be imported. A similar development took place with the woollen industry [Woollen], and the iron manufacture [Iron ManufacTURE.]
(4) Law: Anciently in a stricter and even yet in a looser sense, the King is arbiter of commerce. Theoretically he hss the power to estsblish public markets and farea, with the tolls thereunto belongiog, to regulate welghts and measures, and to give currency to particu lar designations of coins. (Blackstone: Comment., bk. i., ch. 7.)
TI Chamber of Commerce: A society of merchants and others meeting at intervale to discuss mattera connected with commerce. The first is aaid to have arisen at Marseilles in The first is eaid to have arisen at Marseilies in
the 14th century. One was established in the 14th century. One was established in
Glasgow in 1783, one in Edinburgh in 1785 , Glasgow in 1783, one in Edinb
and one in Manchester in 1820.
2. Games: The name of a game at cards.
corm'-mẽrçe (6ometimes, in poetry (?), with acceut on second syllable), v.i. [Commerce, s.]
I. Lit.: To trade; to engage in traffic with others.

commercial traveller. An agent employed by wholesale firms to travel about the conntry soliciting orders.
commercial treaties. Treaties made between two nations for the promution of commerce between them. The first treaty of commerce into which England is knowil to have entered was one with the Flenings in 1272; another followed with Portugal and Spain in 1308. The celebrated cominercial treaty with France, which was negotinted between Mr. Richard Cobden, the grest Free-trader, repreaenting Eagland, and Napeleon In., as antocrat of France, was signed on January 23 rd , 1860; it produced great advantages to hoth countries. Numerous commercial treaties have conntries having commercial relations with
thil land. Of these the most interesting are the reatie made under the Reciprocity clanse of the McKinley Act, with the republiceo Centra and South America, some of the West Iodia Ielande, and some couotries of Europe. Under these treaties free trade in certain articles was established between the countries concerned, the free Imports to the United States being confined to coffee, augar, and hides.
cotm-mõr-cial-işm (cial as shal), \& [Eng. commercial; -ism.] A trading spirit (with a deprecistory meaning).

† còm-mis'-sụ-ral, a. [Eng. commissur(e) -al.] of or pertaining to s commissure; connecting together; belonging to m line or jar by which other parts are connscted together.
"The commintural fibres of the optic tracts."
rodi \& Bowman: Physiol. Anat., vol. L., ch. vini.,

219. 

oŏm'-mĭs-süre, s. [Lat. commizsura $=$ a joining together, a band, a knot, s joint, or seam, from committo.] [Commit.]
i. Anat.: The point of junction of two sides of anything separated, or of two similar organs meeting ai that part. Thus

corpus callosum, or great commissure of brain.
there are commissures st each end of the eye lits nniting them, and one at each side of the mouth connecting the lips. The commissure: of the body, which are most frechently men tioned by distinctive appellations, may be arranged in three categories :-
(1) Comnissures of the brain:
"Certain systens of filres exist in the cerebrum, same. of of opposite latmispheres. The fuest obviuls of these cummisentes are the corpus callogum. thi anteriar commisure, the posterior ronmissure. the And the forniz. All except the twu hist, are trasis:

 (a) Anterior commissure, anterior cerebral anmissicre, or white complissure
Anat.: A round bunche of white fitres naced inmediately in front of the anterio pillats of the formis, and crusing letween the ("nlora striatia of the cercbrun. It marks the anterior boundary of the ventricle.
"The a neerint commissur, is a remarkable bundie
 (b) Crent p. 285
(b) Great commissure

And. : A large commissure connecting the centres of the two heruis heres of the cer mum. it is called atso the corpus cullosum (Quain.)
(c) Great trensurse commissure of the cere bellum: For def. see extract.
"The fibres ot the nons are always develored in the
direct ratio of the helimpheres of the cerevellam .
 hellug these thisrer muxt be regarded as especialiy
 stheres of opposite aides They coustitute, therefore, the great transerere commiestre of the cererereven
nind are to the hemisphere of that orgnil what the nind are to the hemispheree of that orgnn what th
corpus calnsum to to those of the braill." $-T$ odd Boovman: Phytiol. Anat., vol. i., ch. x., p. 274 .
(d) Grey or Gray Commissure: The same as Middle commissure (q.v.).
"The quay rammisure - Todi $\&$ Bovman: Phyziod
Anat., vol.
(e) Middle or soft commiserrs : A soft palogrey layer or bridgs, cousisting of vesicular nlattor with nerve tuhes which stretch from one optic thalamus to the other, dividiug the third ventricls into s superior and an fuforior portion. As it comprises vesicular maiter, it is not s commissure in the ssme sense ns the oi hers which coutain nons. (Todd \& Bnwman Physiol. Anat., vol. i., pp. 278, 285, 286.)
(f) Posterior conmissure: A cord of transverse fibres situated beneath the base of the pineal body, snd mostly connected with the prosterior extremity of each thalsmus. (Ibid., p. 278.)
"The posterior commikure croses the ponterior ex-
trenity of the third ventricle, nud pasken transtersely between the optic thalami $-=$ Tod and Bocman
Physiot. Anat., vol. 1., 1, 285.
(g) Soft commisstre: The same as Middle commissure (q.v.).
(h) Superior longitudinal commissure:

Anat.: A commissure enclosed in the in ternal convolution overhanging the corpus callosum. (Ibid., p. 286.)
(i) White commissure: [Ses No. 1.]
"hich its illoor is furned by the tehte commisoures. forated hy numerous blood-veseatels."- Yood \& Boweman
(2) Commissures of the spinal cord
(a) Anterior white commissure of the spinal cord:
Anat. : A trsnsverse portion of white substance connceting the opposite sides of the snterior median fissure of the spinal cord.
(b) Posterior grey cominissure of the spinat cord:
Anot.: A transverse portion of grey mstier connecting the opposite sides of the pesterior medisn fissure in the spinsl cord.
(3) Optic commnissure :

Anat.: A place, called the chiasms, where the optie nerves of two opposite sides mee each other and partially decussate. The optic commissure is constitnted by the miona of the two optic tracts io front of the tuber cinereum.

Parl.: A term rased when a legislative body reaolves itself into a committee to conaider any bill or matter, in which case the speaker leaves the chair, which is taken by one of the members, called the Chairman of Committee. While in Committee a member is allowed to apeak more than once on any point.
(3) The Committee of Council:

Law: An abbreviation of Judicial Committee of the Privy Council.
(4) The Committee of Public Safety: [A rendering of the French term, Comite de Salut public.]

Hist. : The name given to a committee of members of the French National Convention
during the first revolution. Wheu the National Convention, abont the end of 1792 , aboliahed monarchy and proclaimed a republic, it divided the executive government among asveral committees, paramount over which was the Committee of Purlic Safety, appointed on 6th Aprll, 1793. When the Girondista were overthrown by the Revolution of 31at May, 1793, and the Jacoblus, or the party of the Mountain, gained suprems power, the the Mountain, gained suprems power, the powers of the Committee of Public Safry
were enlarged. It was the rule of this tyrannical and sanguinary committes which is known as the Reign of Terror. Robespierre was its animating spirit, next to whom stood Conthon and St. Just. The exccution of these three men on the 10th Thermidor (July 2sth, 1794) was a lesson to the more extreme party in the committee, which did not again perpetrats the same excesses as before, and it is considered as having terminated the Reign of Terror. In March, 1871, the Cornmnnists established a simitar committea in Paria, which fell in May of the same year. [Commone.]
I Obvious compounds: Committee-man, committecroom.
cốm-mít'-tĕe-shĭp, s. [Eng. committee: ship.] The office or position of a committee. "Trusted with committeelhipy and other gainfol
offces."-Mition: Hist. Eng., bi. L .

"I I an more than common tall."-Shakesp.: AB You

## C. As substantive:

I. Ordinary Language:
t1. The generality, what is usual or common.

## Will . . . exceod the tommon."

* 2. The community at large, the commons (q.i.). [Commune, 8.]

3. An
4. An open and (generslly) unenclosed spsce, the nse of which is not restricted to sny individual, but is fres to the public, or to a certain namber, as, "The Commons," in Boston. Park is a similitr public space.

I Commons, where not nacessary for the health and recreation of the people, are a wasteful method of using land; it producea less
than If it were divided amnong different individuals. As population, therefore, increased, Inclosures becane necessary if the people
were to be properly fed. Laws mads for ita were to be properly fed. Laws mads for ita
purposs were fsvourable to the lord of the purposs were fsvourable to the lord of the snbsequent enactmenta ( 20 Hen. III. c. 4, 29 Geo. II. c. 36, and 3I Geo. II. c. 41) ha might inclose as much of the waste as he plessed for tillage or for wood gruund provided he left common anfficisnt for such as were entitled thereto. A multitude of other Inclosure Acts followed, commencing with 41 Gee. 11 I. c. 109, and running down to 31 and 32 Vict. c. 89. Under these, in 1845, Commissioners, called Inclosure Commissioners, were appointed. [Inclosures.] It was calculsted in 1685 that of $37,000,000$ seres of land existing in England, sbout $18,000,000$, or nesrly the hali, were moorland, forest, and fen. Up till 1845 sbont $10,000,000$ mors acres were inclosed, sbont $10,000,000$ more acres were incloaed,
bringing the total aggregate to $28,000,000$; more than $1,000,000$ have since beeu dealt with in a similar way
But within recent years s resction against inclosure has set in among the inhabitants of the great citiea sind towns, to whom open spaces within sccessible diatance are essential for health sod recreation. Nowhers has this necessity been more Pelt than in London, snd in 1866 an Act was passed for the improvement, protection, and management of the cominons near the metropolis, while in 1878. the Metropolitan Board of Works wers authorised to securs commons where opportunity of fered near the metropolis. The great wooded common, known as Epping Forest, gained from the lords of the manora and others by a decision of the Master of the Rolls on 10th Nov.; the City of London, who had been the successful litigants, and after an arbitrator had settled all claims, Quecn Victoria dedicated it on the 6th May, 1882, to the use of the people for ever. "Houraslow Heath, oa the great Weatern Road, and
Finchley Comment. ot the great Nothern Road, were
perhaps the moet celebrated of these spota."-Na. perthaps the moat celebra
coulay: Hist. Eng., ch. iil.
II. Law: The right of enjoying sny privilego in common with others; a commmity of intereat or right. Thia niay be of many kinds, sa, common of custom $=$ the right to toke wood for fuel or repairs; common of estovers $=$ tbs richt of taking wood for fuel or for domestic purposes; common of pasture $=$ the right of turning out a certain number of cattle to pasture on certain common lands: it is nausily of three kinds-appersdant (when the right is aupposed to have belonged to the house trom time inmemorial, because the honse was within the manor), appurtenant (when the right has become annexed to the house either by gift or purchase, or in some other way), and in gross (when the right belonga to $s$ person to turn out on the common, snd doea not belong to any house or land); common of piscary $=\mathbf{a}$ right of fishing in waters belonging to saother; and comimon of turbary $=$ the right of digging turf on the lands of snother.
TI Free common over the vicinage is when the wastes of the namor join, and there is no fence between them, the beasts of the common of one manor being sllowed to stray on the wastes of the other manor
D. In special phrases:

2. The modicum of sense or understanding possessed by people in general; the power of deciding aimple questiona accurately; the common judgment of mankind.

## 

II. Mental phil.: When Berkeley, carrying ont the eystem of Jdealism, had shown thei on the principle which is ladd down, the existence of the material world could not be roved, and Hume carried Berkeley's sceptiistin to a yet greater length, the Rev. Dr licill, Prof. of Mental Philosouhy in King win, Prof. of Mental Philosophy in King College, Aberdeen, bnilt up a syatern desigued to be aatagonistio to this sceptical one, in what he called common-sense. The first priniples of bellef which all ordinary men, not idiots or Junatica, accept undonbtingly, were assumed to be axiomatic, sad became the foundation of a system of mental philo sophy. Dragald Stewart, holding essentially the same views as Reid, thought the term common-aense an unheppy one, and substi tuted for it "the fundamental laws of human belief.'
B. Ae aljective:

Of a view, dc.: Such a one as an ordiaary person of sound judgment wonld take.
common-sergeant, s. A judicial ofticer ppointed by the Corporation of London as an assistant to the Recorder.
common sewer, s. A sewer through whieln the whole sewage of a city, town, or village passes.

## common-time, s.

Music: Time with two beats in a bar oreany maltiple of two beats ia a bar. The beats may be of the valne of any note or rest or compound of notes and rests, providing the sum required by the time sign ba exactly contaned in each bar. Common time is of two kinds, simple and compound. Simple coumon time is that which includes fonr beata in a har, or any Which incluteg fonr beata in a har, or any division of that nimber, or squard of the express simple conimon time ane the following :
$\frac{2}{2}, \frac{3}{2}, \frac{2}{4}, \frac{4}{4}, \frac{4}{6}$, and the characters $C$ and $C$. Ia thege signs tha upper fignre renotes the quantity of notes required io the bar, and the lower figure the quality of the uotes. Compound common-time is expressed by the signs i, 景, E , such gigns meaning two or four beats of three crotchets or quavers to each beat. [Time.] (Stainer and Barrett.)

8. The House of Commons.
9. A ration or allowance of food.

1 To be on "short commons": To be acantily provided.

I (1) Doctors' Commons: [DocTors' Com moNs.]
(2) House of Commons :
(a) Definition: That one of the two Houses of Parliament which consists of representatives duly elected according to law in preacribed numbers by the burgh, counts, and university constituencies of the United Kingdom. The name Commons is given to its members to distinguish them from the peers of the United Kingdom who sit io the House of Lords.
(b) History: The earliest traces of the House of Commons are in A.D. 1265. The year previously (on Hay 12, 1264), Simon de Montfort, Earl of Leicester, who was of French origin but brother-in-law to King Heury III., defeated his sovereign at the Battle of Lewes, and made lim prisoner. In 1265 the victor issued writs in the King's name requiring euch sheriff of a county to retirn to a parliament which he proposed to hold, two knights for the shire under his jurisdiction, two citizena for each city within its limits, and two bur gesses for each borough. A parliament of lords and other dignitaries had existed previously ; county representatives may occasionally have gat almost from the commencement of the 13 th century, and an assembly of knights and burgesses, nicknamed the Mad Parliament, had met in A.D. 1258 , but no writs are extant before De Montfort's, summoning the representatives of cities and boroughs to attend. The Parliaof cities and boroughs to attend. The parliament thus called togetber met in London on the 22 nd January, 1265 , but on the 4 th August
De Montfort was slain at the battle of Eveshann, and the royal government restored. The victory was obtained for the king mainly throngh the military ability of Prince Edwari, afterwards King Edward I., who, at least as early as 1294, i.e., the 22 nd year of his reign, hinself called together a parliament of the De Montfort type. The borough representa tives were 246, those from the counties or shires 74. Under Edward 111. these numbers had altered to 282 and 74. Each place represented aent two members, without reference to its population. There was universal suffrage members required no propecty qualification and were paid. In the eighth year of Henry VI the county franchise was narrowed in its oper ation, no one now being allowed to rote unlese he possessed freehold worth 40 shillings, a sum the purcbasing power of which wonld have been about the equivalent of $£ 12$ at the beginning of the 18th century, and £20 at the commencement of the 19 th . The Act 23 Hen. V1. c. 14, marle it an indispensable qualification for election as a nnember of Parlia ment that the person should be a knight, or eligible to be one, by which was meant that James I ly his roval prerocative conferred two members on the University of Oxford and the sanse number on that of Cambridge. All along till the revolution of 1688 , efforts All along till the revolution of 1688 , efforts then at least to damage, the burgh representa tion. But in 1694, the 6 and 7 Williain and Mary, c. 2, enacted that Parliaments in future ahould be triennial, an alteration which nuch tended to render the House of Commons indepenclent of the royal authority. A similar Act had been passed in 1641, bnt repealed it 1664. The Act 9 Queen Anne, c. 5 , established a landed property qualification for members whether for counties or boroughs, and by the 1st George I., paased in 1716, the Septennial Act was established which made the Jegal duration of a parliament seven instead of three years. It ia atill in force. At the beginning years. It ia atilin force. At the beginning 513 menbers of Parliament. The union with 513 menubers of Parliament. The union with
Scotland in 1707 added 30 colmty and 15 Scotland in 1707 added 30 colnty and 15
borough members to the House of Commona, borough members to the House of Commona,
that with lreland on January 1, 1801, 64 for
conntiea, 35 for citiea, and one for Dublin University. This made np the entire representation of the United Klngdom to 658, a number which has aince been nominally preserved, though the auspenaion of writs in individual constituencies for proved flagrant bribery has occaaionally alightly reduced the number. For the sweeping changes of the number. For the aweeping changes of the distribution of political power produced in
1832 and 1867 by the trsnaference of members 1832 and 1867 by the trsnaference of member from small and decaying places to important and riaing burghs or aections of conntiea, see Reform bills.
(c) Present atate: A parliament cannot spring into life by any cffort of its own : it requires to be aummoned by the Sovereign. During an interregnum a Convention Parliament, sometimea called simply a Convention, can do sometimea called simply a Convention, can do So, and has done it twice if English history,
once in 1660 , the other time in 1688 . [CoN once in 1860 , the other time in 1688 . [Con-
vention.] Tbe persons entitled to appear as vention.] Tbe persons entitled to appear as
members of the House of Commona and of members of the House of Commona and of Parliament are those who have been elected by the regiatered electors of the several par liamentary constituencies, and have taken an oath or made an affirmation of loyalty, \&c. in the normal way.
The Honae of Commons is presided over by a Speaker. [Speaken.] The first one, called Peter De Ia Mere, was elected in A.0. $137 \%$ Nost of the important legislation which ema nates from the Imperial Parliament has its origin in the House of Commons. For the aeveral stages throngh which a bill proposing aeveral stages throngh which a bill proposing
some legislative change must pass before be some legislative change must pass before be-
coming law, see Bill and $A c T$. For the privileges of Members of Parliament, see Members. By the Septennial Act [1.] a Par Members. By the septennial Act [1.] a Partermed a violent end, dies a natural death in seven years. [Septennial.] A general election of repregentatives to serve in the new House of Commons, then takes place [ELEcTion], and when a new Parliament assembles, the House of Lords, as an essential part of the complex machinery, is also summoned to meet But few parliaments die a natural death When the Ministry is defeater on what they deem a vital point, and they are of opinion that the country agrees with then and not with their adversaries, the Sovereign generally with their adversaries, the sovereign generally
receives and acts npon the advice to dissolve Parliament, an act which formally submits to parliament, an act which formatly submits to
the judgntent of the constituencies the dis the judgnient of the constituencies the dis
puted point which cansed the ministerial crisis [Dissolution.] When a parliament only ad journs, on resuming its sittings, it takes up its husiness where it was lelt off, but when prorogued the Session is lielt to be at an end, and most of the business las to begin anew, [Adjolrnment, Parliament, Prorogation.]

## I. In France:

## 1. Ondinary Language:

* (1) Under the feudal regime: A body of burgesses in a town which had recelved a charter granting it municipal government.
(2) Subsequently:
(a) Any assemblage of villagers or others united by conmon interests and under the same local government; a parish, a district.
(b) The commonslty, as opposed to the nobility.

2. History:
(1) The municipality of Paris, which, during the most sanguinary period of the first French Revolution, was the mouthplece of the more ferocious revolutionaries. Under the ole ferocious revolutionaries. Under the of of privilsged classea, the king, the noblea, the hrivileged ciassea, the king, the noblea, tha their tyranny caused the revolution. Men of genius, chiefly from the middle clasaes, led the uprising at its commencement, and constituted the Girondist party, which, to gain the victory over the upper class, encouraged or even fomented revolts smong the mases of the Parisian populace. The policy was successful for its primary object, but the demoniac spirit they had raised they conld not sgain lay, and ultioastely it was fatal to themselves. When, in 1792, it was believed that Austris and Prussia, which had invaded France, destigned to force sgain on the nation the emigrant ariatocrats thirating for vengeance, the Legislative Assembly enacted that whenever it passed a vote that the country was in dsnger, svery municipsility should sit permanently. All ranks should arm, and those of them called to serve out of their native place ahould receive pay. The vote "The country is in danger" actually having taken place, the Municipality of Paris, which met at the Hotel de Ville, and had been formally constituted there on the 21 st of May, 1791 , began to sit in permanence. Subordinste conncils were formed in each of the diatricts or sections of the city. These subordinate sections sent commissaries to the leading munictpality, who, in place of aiding the old nembera in their deliberations, simply expelled them and nsurped the power which they had wielded. Thus was constituted the celedrated Commune under whose anspices the Tuileries were captured, the Legislative Assembly and the Convention themselves domincered over, the Jacobin and other ciubs of extreme politicians put in possession of all power in Paris and France, massacres of remurseless cruelty perpetrated, and the Reign of Terror insugursted. Robespierre, Marat, and Danton became its leading spirits. of this triunvirate Marat was assassinated on July 13, 1793, Danton guillotined on April 5 , 1794 ; and when on July 28 Robesplerre shared the same fate, having been captured the day befors at the Hotel de Ville, the head-quarters of the Commme, the illegitimate domination of the latter came to an end, and Paris was of the latter came to an elld, and Paris was
soon afterwards, for safety's sake, divided soon afterwarus, for safetys sake, divi
into twelve nunicipalities instead of one.
(2) On March 18, 1871. an insurrection in Paris overtlirew the Government, and an orgsnisation, taking the name snd prepared to carry out the traditions of the old revolutionsry commune, was proclaimed on the 25 th. Among its notahle, not to say notorious deeds, were the burning of the Tuileries, the Hotel de Ville, and some other public buildings of historic ant some other public buidings of listoric
interest. Four days afterwards, or on May 28 , 1871, Paris was taken by storm, the eommume fell, and many of the communards were either executed or transported.
*II. In England: The common people, the commons.

"The Israelites had never nuy.
*5. Anact perforned publicly or in commen, and 'in publick manuer."-hateigh: Hist. of the Horld. IL. Technically:
I. Scrip.: The appropriate readering of the word кow revisers retain the word communion, but place In the nargin, "participation in." It seems to have a doulle reference: (1) Participation in "The cup of hlessing which we bleas, is it not a communion of [participation in] the blood of Christ: the bread which we break, is it not a communiou of [participation in] the body of Christ." (2) The unity of those who participate: ". . seeing that we who are many are one liread, one hody, for we all partake of the one bread." In the margin: "See ing that there is one bread, we, who are many, are one body."
5. Theology:
(1) The aet of partaking with others of the sacramental symuols in the Lord's supper. For tho first three centuries the communion was administered every Lord's Day; then it became more infrequent, and before long was limited to Easter, Whitsunday, and Cliristmas. Many neglecting it even on these days, the Council of Lateran, in 1215 , ordered all CathoCouncil of Lateran, in 1215, ordered all Catholics to commumicate at least once a year, naming Easter as the the Council of Trent confirmed. For the first the Council of Trent confirmed. For the first
seven centuries the practice was somewhat seven centuries the practice was somewhat
general of mixing watcr with the wine to symbolise the mystic nuion between Christ and the communieant's soul. Originally both bread and wine were administered, but in 1096, Pope Urban 11. sanctioned the practice of omitting the wine when the communicant was a layman. This method the Council of Constance enjoined in 1414. It has since remained in force in the Church of Rome, but at the Reformation communion in loth kinds, as it is often termed, was restored to the laity. The communion service of the Chureh of England was adopted in 1552.
(2) The community of helief, and thenretically at least, of Christian affection, existing ameng those who partake together of the Lord's Supper. communio is used in thia sense in
fāte, făt, färe, ąmidst, whãt, fâll, father; wē, wĕt, hëre, camẹl, hẽr, thêre; pine, pĭt, sire, sïr, marîne; gŏ, pơt,

the canons of the Conacil of Elvira, A.D. 313. From thls use of the Latio word is derived the practice of calling tha several deaminations, Communions, as the Lutharan Communion, the Wesleyan Methodist Communion, the Congregational Communion, sce.

2. Socialism: Community of goods, that is, the holding all goods in common, and the abolition of tndividual ownerahip, is advocated by many who wish to reconetruct aociety on as aocialistic basia. It is believed to have existed in the early ages of the world, and io the firat part of tha apontolie age of Christianity. The view requires modification io both cases. It the frat, Blackstone fa of opinion that what existed in the earliest ages was a transient right of private property, that is, that one who tirst began to use anything acquired a brief right of yroprietorahip in it, which lapsed when he ceased to uas it any longer. At the first rise of Christianity a longer. At the arst rise of corch was made to the establishment aear approach was made to the establishment what one had into the common treasury being the rule, to which there was acarcely an exception (Acts ii. 44, 45 ; iv. 32). But from Acts $\mathbf{v} .4$ we learn that this rule was not enjoined upon any one; each was free to retain hia property for his own use if he pleased. [Church History, Ccmmunism.]
com-mūt-a-bǐ'-i-ty̆, s. [Eng. commutable; -ity.] The quality or atate of being commutable; interchangeability.
"When both are oubstantivees, the commutabitity of Logic as applied to Language.
cơm-mūt'-a-ble, a. [Lat. commutabilis, from commuto $=$ to exchange: com $=$ with; muto $=$ to change.] Capable of being commuted, or of leing exchanged for other things ; taterchangeable.
"Bnt pere the predicate and subject are not com-
corm-mu-tā'tion, s. [Fr. commutation, from Lat. commatatio $=$ an exchange ; commuto $=$ to exchange.]
I. Ordinary Language
*1. A changing or altering from one atate to another.
".. in a word, so great is the commutation, that
.."-South: serm.
*2. Exchange; the act of giving and receiving one thing for another.
"̈aid that there be some method nnd means of com
matution, os that of mouey."- Ray: On the Creation
-3. A rageor.
"The hwof God hal allowed no evasion, that is, by
way of commutction ur redemption." ${ }^{-10)}$ )own.
4. A sum of money or other equivalent given in exchange for something clae.
II. Technically
I. Astron.: The angle of commutation is the angular distance betwecn the sun's true place from the earth, and the place of a plaset reduced to the ecliptic.
2. Rhetoric: A figure of speech whereby a complete transposition of the words in the sentence takes place; as. "I do not live that I may eat, but 1 eat that I may live." Iu Gr. àvтццетаßúity (antimetabolē).
3. Luw:
(1) The substitution of a punishument less in degree for one grater in degree.
(2) The giving one thing in exchange or equivalent for another, as the exchange of tithes for a rent-charge.

TJ Commutation of Tithes: [Tithe.]
cóm-mù-ta-tíve, cŏm'-mu-tā-tive, $a$ [Fr, commututif, as if from a Lat. commutativus, from commutatus, 1 a. par. of commuto.] Of or pertaining to exchange.
"Commutativa justice requires thatevery man should
have hin own."-isf. B alll : Coses or Conseience, 1.1
If A commutative contract:
Law: One in which each of the contracting parties gives and receives an equivalent. (Wharton.)
cóm-mū'tan-tíve-ly̆, cơm-mū-tā'-tive ly, ade. iEng. commitative; - Iy. j in respect of or by way of exchange. (Browne.)
cŏm-mụ-ta'-tõr, 8. [Lat., from commutatus, $\mathrm{p}^{\mathrm{m}}$. $\mathrm{p}^{\text {ar. }}$. of commuto $=$ to exchange.]

Elect.: An inatrument which periodically

Interrupts an electrio current. It is some-
times used as a name for a device for throwing times used as a name for a device for throwing force of a battery; and occasionally for a device for directlag a current into aeveral circuits in auccession, the current being through only one circuit at a time. It seema to be naed in the above nenses by varioua standard electriciana, but they all agree in one point in their use of it ; i.e. that there is change, either of direction, atrength, or circuit of the current. (Knight.)
cotm-minte', v.t. \&u i. [lat. commuto $=$ to exchange : $\operatorname{com}=$ with ; muto $=$ to change. $]$
A. Transitiva:

- I. Ordinary Language:

1. To exchange; to give or place one thing in exchange for another.
"This will commute our tasko . . ."-Decay of Pioty. 2. To huy off or atone for one obligation hy another.
"Some commute owearing for whortag ins if tor, $-L$ batrange.
2. To pay for in grosa leas than woald be paid for each separate item combined; ab, To commute the passage for a year (American, corresponding to our taking a aeasonticket).
II. Lav:
I. To change a punishment to one of a less degree of aeverity.
that her sentence should be cormmutecl from
to behealing "-Macaulay: Hist. Eng ch. $\nabla$.
3. To give one thing as an exchange or
equivaleut for another, as to commute ithes equivaleut for an
for a rent-charge.

## B. Intransitive:

* 1. To effect a commutation ; to serve an an exchange or substitute.
"Those institutions which God designel for soenna to further mine In lioiliness, they look upos an a a prini-
leze to serve instand of it, and to commure for jt. South : Serm

2. To make an arrangement to pay in gross, especially in travelling (American) ; as we say, To take a neason-ticket.
commuted current, s.
Elect: A current tho direction of which is changed by a commutator.
oóm-mūt'-ě̃d, pa. par. or a. [Commute]
cóm-mūt'-ẽr, s. [Eng. connmut(e); -er.] One who commutes; ospecially one who commutea the charge of travelling for a period.
cöm-mūt'-ing, pr. par., a., \& s. [Comsute.] A. \& B. As pr. par. \& particip. adj. : (See the verb).
C. As subst. : The act of exchanging or mubstitutiog; commutation.

* cǒm-mū'-tu-aI, a. [Pref. $\infty m=$ with, together, and muiual (q.v.).] Mutual, reciprog'ther, and mut reciprocating.

Gammurual death the fate of war confounds.
Each adverse battle gorid with equal wounds."
Pope: Homer's Ildad. Wk. xili., 1. $85-6$
Since love our hearts, and Hymen did our banda

t corm-mū-tụ-ă1'-1-ty̆, s. [Eng. commutual -ity. $]$ Mutnal or reciprocal union.

> " In food connmutuatity of soul." Tennant $;$ Anter Fair, vi. 69.
" cŏm-my̆xt', pa. par. ог $a$. [Сомmix.] Mixed, mingled.
"Commyxt thoo most hem be with drle dounke",
 because the branches are tufted at the top of the tree.]

Bot.: A genus of plants, order Anacardiaceæ. Comociadia integrijolia is a handsome tree with an crect trunk, few branches, smooth jimnate leaves, numerous flowers and deep red, shining, eatable frnit. The wood is hard, of : fine grain, and reddish. If C. dentata, which is a native of cula, be evcr so bliglitly wounded, it emits a atrong smell of dung, whence the natives are airaid to slecp under its shade.

* ō̄-mŏg'-ra-phie, s. $\quad[\mathrm{Gr}, ~ к \dot{\omega} \mu \eta(k \delta \bar{m} \bar{\rho})=\mathbf{a}$ village, condining form - ypaфıa (graphia) $=$ description ; үpí申w (graphō) $=$ to describe.] A description of a village. (Special coinauro.)
"Condemn not this our comographio or description of a country-town as too low rand nhr
Fuller: Fist. Walcham Abbey, p. 17 .

＊3．Sexual intercourse．
B．Technically
1．Commerce
（1）A number of persons legally associated for the performanee of any duty or the carry ing on of any business．The profts are divided amongst the members or shareholders in pro portion to the amount of capital invested．

If When the persons combining together for comnercial enterprise are but few，the asso－ ciation is generally called a eopartnery ；but ciation is generally called a eopartiery；but
when many are thus united the name given When many are thus united the name given ap company．Thus no one ever thought of aplyying the term copartnery［Copahtseri］to Bay Company．One division of companies is into exclusive or joint stock companies on the one hand，and open and regulated eompanies on the other．［JoInt sTock．］In the former the enterprise is carried on hy means of money previously raised by the sale of shares in the company to intending sharelolders．The iirectora or those whom they employ manage the business ；the shareholders do not trade with their part of the stock，lut remain pas－ sive，except that they annually vote aproval or the reverse of what has been done．Joint stock companies are divided into those of unlimited and those of limited lialility．If a company of the former type fail，every share－ compler is personally liable to the extent of all holder is personally liable to the extent of all
that he possesses for the debta which may that he possesses for the debta which may
have been incurred，with the exuense of have been incurred，with the exjense of
winding up．In a limited liability eompany again he is responsible only for any portion of his shares for which the money has not yet been called up．
＂But there were some who beld that our commerce
with Indis would be beat carried on by means of what with Indin would be best carried on by means of What
in cilied a regulated Company．＂－Macaulay： In cailed a reg
（2）The partners in any firm whose names do not appear in the title or style of the firm ； in thit use the word is generally contracted to
（3）A society，corporation，or guild for the
promotion and protection of the interests of any trade．

I Civic Companies or Corporations，specialls those of London：
（1）Hist．：Trade guisda are mentioned in ome laws regulating the city of London which were made under King Athelstan in A．D． 939 some centuries later，when the towns began to ahake off the letters of fendal oppreasion the citizens or burgesses were divided into various trades or guide which were made cor porations，and had the pontical privileges ao corded them of electing magistrates，and ulti mately even members of parliament．These guilds either legitimately obtained or uaurped the power of enscting bya－laws regulating the admission of new membera，allowing none to enter them except they had first served a regular apprenticeahip to the trada they de aired to practice，and prohibiting any one not member of their body from carrying on his member of their body from carrying on hi rade within a corperate town．In France similar corporationt long prevailed，and with abuses heyond any exiating in England；but tha whole aystem was awept out of existence by the first French Revolution．
The United States never established trada corporations，and in 1810，Albert Gallatin， Esq．，Secretary to the Treasury of that Re puhlic，boasted that＂Industry is in ever respect free and unfettered；every grecies of trade，conmerce，profession，and manufacture， being equally open to all without requiring any regular apprenticeship，admission，or licence． At home the privileges of the trade companies were found opuressive，and some of their fran－ chises were taken from them，so that at laat they chises were tanen from them，so thatat last iney
（2）Present state：London，the great seat of the old gnilds now mentioned，has seventy－six of them still existing．They are known as the London City Livery Companies．To these there must be added three which have no livery making reventy－nine in all．Some have ceased to exist．Among these is the Longhow string makers Company，but the Bowyera（i，e．Bow makers）still continue．£25 is the sum which one must pay to be admitted to their livery Twelve companies being regarded as higher in dignity than the others have the title＂Hon－ ourable＂prefixed to their designation．The following are the names with the dates at which they are believed to have first arisen ：－ 1 ．The Mercers（A．D．1393）．2．The Grocers（1345） Mercers（A．d．1393）．2．The Grocers（1345）

*(6) A going about, or ly ronndabont means, to effect anything; stratagem.

Fortune ... caches
cumpasas to ende.:

* ( $)$ Craft, cunning, art.

Ther stont a trone ${ }^{\text {Withe }}$ eumpas throwei and with gin 1 -do."
II. Technically:

1. Carp.: A circnmacribing instrument, o one for describing ares or measurers' lines.
2. Music: The range or power of the voice or of any musical instrument; the extent of notes or sounds pessible to be expressed by it.
"Throngh all the companes of the notes it ran,
The diapason closing full tu man." $\begin{gathered}\text { Dry } \\ \text { Dren : Ode on St. Cerlia's Day. }\end{gathered}$
3. Magnetism: An instrument for determin Ing horizontal direction by means of a poised magnetic needle. There are maty kinds of it the best known is the mariner's compass. [4.]
4. Nuut.: The mariner'a compass, which is a declination compass used io guiding the conrse of a sbip. It is geaerally enclosed in a box, which again is placed in another and
larger one the iatter tormed the binoacio, the sppropriate situation of which is the deck in the after part of the vessel. The magnetised reedle, which ia the esseatial part of the mariner's compass, is afyed to the lower part of a card, which may be made of ordinary card board, of a leaf of mica or acything similer By thia arrangement, which is the most con venient one, the card revolves with the needie It is marked not merely with the fonr cardinal points, but with varions miouter diviaions so as to constitute 32 in all. To keep the compase in a horizontal position, notwithstanding the rolting of the ship, it is supported on gimbala. In an iron or ateel vessel there is deviation. of the aorth and soath line from the marnetic meridian, owing to the permanent macnetism of such a yeasel. This io compeosated tor by placing a permacoent ateel magnet in the ncigh placing a permanent ateel magnet in the ncigh bourhood of the compass. whicls exerts an equa and oppoaite couple to that due to the ahip. It is believed that the mariner'a compass was io use in Ching first on land and then, after an interval, to guide ahips on the aea. The arme of its ioventor has not been preserved. Nor is it known who iotrodnced it into Europe, or wheo. Guyot de Provins, a Freacl poet, who in A.D. 1190 wrote a satire called "La Bible," apeaks of it, but haviag heen a crusader he may have aeen it to the East. If it had reached the West, it was acarcely kno wo when. lie wrote, but about 1250 it began to he appreciated, and aoon after came into general use.
-I Azimuth Compass: [Azımuth.]
Declination Compras: An instrument intended to measure the magnetic declination of a place, when its astronomical meridian is koown.
Inclination Compass: An instrument for measuring the magnetic inclination, or dip.
Mariner's Compass: The aame as Compass, II. 4 (q.v.).

Prismatic Compass: Tha same as Azimutr Compass (q.v.).

Sine Comyass:
Elect. : A form of galvanometer for measur Ing powerful enrrents.
Targent Compuss:
Elect.: An insirumeat for measuring the iatensity of a voltaic current in which a small needle ia placel. The intensity of such a current being proprortional to the angla of deffec tion, the instrument ascertains this deflection after which its corresponding value is obtained from a table of tangents, and thus the intenaity of the current is loeasnred.
"III. In special phrases ant compounds :

## Itul. compensazione, A. As substantive:

I. Orlinary Language

1. The an:t of rendering an equivalent for.
2. That which constitutes an equivalent for sornething else.
(1) Lit.: That which is given or received as an equivalent for services rendered, losses an equivalent for scrvices rendered, losses of a debt; amends, remnneration, payment, recompense.
loses.-- partly as a compensation for their recent
(2) Fig.: That which balances or is an equivalent for something else, or makes goud a defliency.
3. Gen.: The same aa A. I. (1).
4. Spec.: A stoppage or set-off. When one Is sned for a delt, it is competent for him, partially or wholly, to har the claim, by sileging thrat he is the plaintifre creditor for services rendered or money lent. If the sum claimed from the plasiutiff is fond to be the exact eqnivalent of that for which to be the the two are held to compensate or balance
esch other; if, on the contrary, it be less, it diminishes by so much the prosecutor'a claim. If, howaver, the defendant feel that he owes the plalntiff more than that Individnal is indebted to him, he is required at the outset to pay into conit the amaller sum for which he admits himaelf to be respronsible. (Blackstone: Comment., bk. Jii., ch. xx.)

T Crabb thus dlstingulahea between compen sation, satisfaction, amends, remuneration, re com perme, requital, and revoord. "The first three of these terms ere ernployed to expresa a re turn for some evil; remuneration, recompense, and requital, a return for some good; revand, a return for either good or evil. A compensation is sontething real ; it la made for some positive injury sustadned; justice requirea that it should be equal In value. if not like In kind, to that which is lost or injured: a satisfaction may le imaginary, both as to the injury and the return; it is given for personal injuries, and depends on the disposition of the person to be scaisfied : amends is real, but not always made for injurjes done to others, as for offences committed by onrselves. Sufferers ought to have a compensation for the injurics they have gustsined throngh our means, but there are lnjnrics, particularly those whicls
wound the feelings, for which there can be no wound the feelings, for which there can be no
compensntion: tenacions and compensation: tenacions and quarrelsome people demand sotisfaction; their offended pride is not satisfied without the humiliation of their adversary : an amends is honouralle which serves to repair a falt ; the best amends whleh an offending persoo can make is to acknowledge bis error, and avoid a repetition

Compensation is made for bodily labour and menial offices; remuneration for mental exertions, for literary, civil. or political othees service and the return; it is an net of generosity . . Requital is a return for a kindness the making it is an art of gratitode ; the omission of it wounds the feelings : it sometimes though not often) happens that the only requital which ourkind action obtains, is the animosity of the person served." (Crabl: Eng. Synon.)
B. As adj. : (See the compounds)

## compensation balance, $s$.

Hor.: A balanee-whel for a wath or chronometer, so ennstruct das to makr isochronal (equal time) beats, notwithstanding changes of temperature. (Knight.)

## compensation pendulnm, 8 .

Hor.: A peudulatm constructed of two diffrent metals, as brass and iron, which so work against each other, that the expansion of the one downwands is connteracted by that of the other nywards. By this arrangement the pendulum does not vary in length, and consequently in frequency of vibration. compenation balance-wheed for chronometers and watches is constructed on a sinilar prineiple.
compensation strips, s. pl. Two blades of copper and iron suldered together and fixed to the rod of a pendulum, the copper rol, Which is the more expansihle, being below the rod becomes shorter ture falis, the pendulum rod becomes shorter, but the strips, if in their normal state horizontal, now curve with the convex portion upwards. If again the temprature rises, the pendulum ball descends, hut the atrips, which now curve with their comvexity downward, make a compensation for this. Both in the former case and in that now describet, the contre of oscillation of the pendulum is not disturbed. Compensation strips are called also oompensuting strips. (Ganot: Physics, transl. by Atkinson,
\& 271 .)

corm-pẽr-ĕn-dinn-ā-tion, s. [Lat. comperendinatio = the putting a trial off until the third day.] Delay, dilatoriness. (Bailey.)
cơm-pẽr-tör'-1̌-ŭm, s. [Lat. compertum, sup. of comperio $=$ to bring up, to find out: com $=$ with, and aperio $=$ (1) to uncover, to lay bare ; (2) to open.]
Civil Law: A judicial request made by delogates or commissioners to find out and establish the truth of a canse. (Parish Antiq., 575.$)$
cóm-pēte', v.i. \& t. [Lst. competo $=$ to go together, . . to seek togetlier : com $=$ together, and peto $=$ to go to, . . to toeek.]
I. Intransitive:

1. To seek together, or to seek what another is also striving at the same time to obtain (Used of persous, of the inferior animals, or of thinga inanimate.)
couditioun of life in the different inklands, tor it would
 2 To claim eqnality with
2. To claim equality with.
+1I. Trans.: To engage in competition for anything.
cěm'-pĕ-tẹnçe, cĕm'-pě-tẹn-ç̆y, s. [Dan. competence; Ger. Kompetenz; Fr. compétence; Si. \& Port. competencia; 1tal. competenza; Lat. competentia $=$ a meeting together, agree ment, symmetry, from competo.] [COMPETE.]
I. Ordinary Language:

## 1. Gen.: Sufficiency.

$\because$ Sowethug of syeech is to be Indulged to common recreative dlscourses which tna intampthetency to those of society."-Gorernment of the Tongue
2. Spec.: Adequate peconiary support, re. mote at once from want and from supertuity.
"He oltained from the roynd bounty modest mint.
II. Lav:

1. Of persons:
(1) Legal alidity or permission by law to act in a certain eajracity. Thus the competence of a judge or a court to try a canse means that the cause is fairly within tho jurisdiction of the judge or court, and the competence of a witness to give evidence means hia legal capacity to do so. This depends on his not being challenged as infamona in character or personally interested in the case. (Blaclistone: Comment., 1k. iii., ch. 23.)
(2) Legal capacity to do any act, as to make a will. It dejends on age, soundness of mimo sc.
2. Of evidence: Admissibility.
cơm'-pĕ-tent, " cřm'-pĕ-tĕnte, a. [Dan. ompetent; Ger. kompetent; Fr. computent; S 1 , pr. par. of ompeto.] [Compete.]

[^164]L. Ordinary Language:

1 Suitable, fit.
-2. Proportionate, adequata.
3. of things: Sufficlent, able to produce cortain effects.
.-. whet ber thoes extremoly minnl particleen are

4. Of persons: Qualiffed for sny parpose or offce; hsylng physical, inental, or moral sbility to do certain things or to oceupy a certaiu place.

 II. Law:

1. Of evidence: Admlssibla in a law court.

2 Of persons: Legally qualified to do any particular thing or to fill any specified offlee.
"And he wan comperent whoos parse wan noi",
IT Crabb thus distinguishes between competent, fitted, and qualified: "Competency mostly respects the mental endowmonts and attainrespecta : fitness tha disposition and character; menits: fitness tha disposition and character;
Qualification tha artificial acquirements or Qualificalion tha artificial acquirements or
natural qualities. $\quad \Delta$ person is competent to
 nitertake an offica ; ;itted or quadifed to fila a
gituktlon. Familiarity with any aubject, aided by atrong mental endowments, gives competency; auitabla habits and tamper constitute tha finness; acquaintance with the business to be done, and expertness in the mole of performing $\mathrm{it}^{\prime}$, constitute the qualifcation." (Crabb: Eng, Synon.)
ơm-pě-těn'-tëş, s. pl. [Lat. competentes, pl. of competens, pr. par. of competo.] [CompeTE.] Ch. Hist. : An order of catechuniens in the early Christian Church who were candidates for immediate baptism.
cơm'-pð-tont-1 $\mathbf{y}$, ndv. [Eng. competent; -ly.] In a competent manner, perfectly, auitably, projortionately.
"The feesh is elther competently dry .i. or moyst
and excrementitlal."- Fenner: Fia Recia, p. 92 .
*cơm-pět'-1-ble, a. [From Lat. competo = to aeek together.] Suitabie to, consistent with, sble to be predieated of, applicable to.
(1) Followed by with :
"It is not compoetialo with the grace of God so much (2) Followed by to:
"The duration of eternity is euch as it onily com petible to $t$
T Its phace has been taken by Compatisle (q.v.).
"cơm-pět'-i-ble-nĕss, s. [Eng. competible; -ness.] Suitableness, fituess. [CompatibleNess.]
cöm-pé'-tǐrig, pr. par. \& a. [Compete] it niot for other competing splpecies in unubers, were Origin of Spectes (ed. 1859), ch. vi., p. 17s.
obm-pĕ-ti'-tion, s. [Sp. competicion; Port. conpeticdo; from Lat. competitio $=$ (1) an conpeticdo; fron lat. competitio $=$ (1) anl
agreement, (2) a judicial demand, from comagreement, (2) a
I. Ordinary Language:

1. The act of endeavouring to galn what another attempts to gain at tha aane time, and which as a rule only ona can anjoy.
"To acenes where competition, evvy, strife.
Beget no thunder-clouds to troubie iffe.
(1) Compettition was formerly followed at times by to:
competition to the crown."-Bucon.
(2) Now for is used of the objectstriven for, and to or amongst of thase who strive.
might well have been an ohject of competition
reighs . . - Hicaulay : Hist. Eng., ch. is.
II An open compatition for an appointment is a competition open to any one fulfilling certain quslifications who thinks fit to present himself. It is opposed to the more limiterl competition which takes placa when only norinees of some person or office can enter.
2. Tha state of existing in permanent rivalry with another person or with another apecies. It may be nsed of all animated beings.

- For it thould bi remembered that the competition will generblly, most mevero between thone fonns anch are mot eariy related to ench other in habita, Species (ed. 1859), ch. iv., p. 121 .
II. Polit Econ. : Tha stringle whtch each one makea for his own interest against that of others. A ohopmen, for instance, triea to draw customers around hin by underselling his rivals. Such competition tends to tix the prica of articles as low se the law of supply and demand will nermit. When there is no adulteration, use of short weights, or other fraud, it is of great beneft to the pobic.
Tf Crabb thus distinguishes between competition, emulation, and rivalry: "Competition expreases the relation of a competitor, or the act of seeking the aame object; emulation expreasea a disposition of the mind towards particular objects ; rivalry expresses both the relation and tha disposition of a rival. Emu lation is to competition as the motiva to tha action; emulation produces competitors, bu it may exist witbout it: they have the same marks to distinguish them from rivalry. Competition and emulation have hodonr for their baais; rivairy is but a desire for selfish gratification. A competitor atrivea to aurpass y honest means; he camnot succeed so wel. by any other: a rieal is not bound by any rinciple; he aeeka to aupplant by whatever means seem to promae success. An unfair competitor snd a generous rival are equally unususl and iuconsiatent. Competition animatea to exertiou; rivalry provokes hatred: competition seeks to werit success; rivalry is contented with obtaining it." (Crabb: Eng. Synon.)
com-pĕt'-i-tive, a. [From Lat. competitus, 12. par. of competo $=$ to seek together ; and Eng. auff. -ivc.] Pertaining to competition involving competition. (II. Martineanh)

2. To inform against, to accuse.
"Now paster Shallow, yon'll complain of we to the
councll?"-Shakesp. : Serery Wikes, it 1 . +3 . To ail; to auffer from some complaint. (Colloquial.)

Sounded soldier ! If complaining.
Nacreill? Wnes of War, p. s
${ }^{\text {\# }}$ B. Reftexive: To address or turn in complaiot.
"Where then, alas ! may I complain myself ?"
C. Trans. : To mourn or lament over; to bewail.

They returned and complayned here grete losse."

- Crabb thus discrininates between to complain, to lament, and to regret: "We complain of our ill hesth, of our inconveniences, or of troublesome circumstances; we lament our inability to serve another; we regret the absence of one whom we love. Selfish people have the most to completin of, as they demand most of others, and are most liable to be disappointed ; anxiona people are the most liable to lament, as they feel every thing strongly; the best regulated mind may have occasion to regret some circumstances which give pain to the tender affectiona of the heart.
He thua discriminates between to complain, on murmur, and to repine: "The idea of expresaing displeasure or dissatisfaction is common to these terms. Complaint is not so lond as murmuring, but more so than repining. We complain or murmur by some audible method; we may repine secretly. Complaints are always addressed to some one; murmurs and repin. ings are often addreased only to one'a zelf. Complaints are made of whatever createa uneasinesa, without regard to the source from which they flow; murmurings are a apecies of complaints maxle only of that which ia done by others for our inconverience; when uaed in relation to jersons, complaint is the act of a auperior; murmuring that of an inferior; repining is always used In relation to the genersl diapositlon of things." (Crabb: Eng. Synon.)
"cóm-pläfn', s. [Complain, v.] A complaint. promite of her lone complain.". $\begin{gathered}\text { Kethes : Lamia. }\end{gathered}$
* cotm-plāin'-a-ble, a. [Eug. complain; -able.]. Suhject to complaint; liable to or deserving of being complained of.

* B. As adv.: Perfectiy, completely.

The royall bodle get he left unspolld, rellgion
The act of broyle; and all in fire, be buru'd him
compleate armid.' Chapman: Homer's ILiad, ble. v.
"T Biair thus discriminates between entire and complette: "A thing is entire by wanting none of ita parts; complete by wanting none of have an entire house to himseif, and yet not have one complete apartment." (Blair: Lect. on Rhetoric and Belles-Lettres (1817), vol. i., p. 230.)

T Crahb thus discriminates between complete, perfect, and finished: "That is complete wbich has no deficiency: that is perfect which has positive excellence; and that is finished which has no omission in it." (Crabb: Eng. Synon.)
For the difference between complete and u'hole, see Whole.
cóm-plē'te, * com-plēat', v.t. [In Fr. completer.] [COMPLETE, $a$.]

1. To hring to a state of perfection, to perfect, to fuilii, to accomplish; to carry out to the compliete end.
2. To flisish, to bring to an end, to perform.

I Crabb thua discriminates between to complete, to finish, and to terminate: "We complete what is undertaken by continuing to labour at it; we finish what is begun in a state of forwardness by putting the last hand to it; we terminate what ought not to last by bringing it to a close. So that the characteristic idea of completing is the conducting a thing to ita final neriod; that of fanishing, the arrival at that period; and that of terminating the cessation of a thing. Completing has properly relation to permanent works only, whether mechanical or inteliectual ; we desire a thing to be completed from a curiosity to aee it in ita entire state. To finish is employed for passing occupations; we wish a thing finished from an anxiety to proced to aome-
thing else, or a dialike to the thing in which wo are engaged. Terminating reapects diacussions, differences, and diaputes. light minds undertake many things without completing any." (Crabb: Eng, Synon.)
cơm-plēt'-ăd, ớm-plēat'-九d, pa. par. or a. [Complete, v.]

5. The mental or moral qualities or character.

Writers Indulgent to the peculiarities of their com
B. Ethn. : In the sanie senseas A. I. 2. Dr. Prichard arranges the complexions of the several varieties of man under three types:-
(1) The Melanocomous or Black-haired type. It variea greatly in the depth of its hue, from the intense black of the negro, through the dark red of the American Indian to the brownish yellow colour, improperly ealled olive, of the Fastern Asiatic, its extreme being the slightly dark tinge of the black-haired individuals or tribes of Europe.
(2) The Xanthnus, or Yellow-haired type The hair, nominally yellow, may also be light brown, auburn, or red. The skin is fair, the cyes blue or grey. The majority of tho Tentonic race, includiag the English, are of this type. It may spring up anywhere among the Blite-haired races of men, and does so when these are subjected for generations to colle. Thus there are fair-haired blue-eyed Jewa, Afghana, \&ic.
(3) The Leucous or Albino, with the absence of colouring matter in the hair and eyes, the former being fleery white, the latter pink. It exists sporadically in hot countries, among the dark-haired races of mankind, and is a morbid rather than a healthy state of the bodily frame. A strictly analogous change is seen in several of the lower animals. [Alsmo.]
"cóm-plěx-ion (plexion as plčck'-shôn), o.t. [Complexions, s.] To endow or endue or characterize with a complexion.
"Charity is a virtoo that best asrees with coldest Matures, and such as are cmpph

- com-plex - fon-a-bly (plexion sa plecok-shonn), ady. [Alparently from an sdj. complexionable, which is not found, but probably a misprint for complexionally (q.v.).] In the way of constitution or temperanent constitutionally.
"Heada that aro disposed unto schima, and eom. poeed Ior © oomununity. ..."-Air T. Browne: Retigio Medich.
- cŏm-plex'-ion-al (plexion as plěck'shō), a. [Eng. complexion; -al.] Of, per taining to, or dependent on the complexion or temperament of mind or body.
" Mon and other animaile receive different tinetures
cóm-plex'-fon-al-ly (plexionas plěck'shốn), adv. [Eag. complexional; -ly.] In way of complexion or temperament ; constitutionally. (Browne.)

cóm-plěx'-1-ty̆, s. [Fr. eomplexité.] [СОмpLEX, a.] The quality or state of being complex or complicated; intricacy, complication. 1 cau see no limit to the amount of change. to the beauty ad iufiuite complexity of the coadalitations
betwen all organic beins." -Durvin: Grigin of Spe cies (ed. 1855), ch. iv., \&. 109
- Crabb thus diseriminates between compiexity, complication, and intricacy: "Complexity expresses the abatract quality or state complication the act: they both convey less than intricacy; intricate is that which is very conplicated. Complexity arises from a multiturle of objects, and the niture of these objects; complication from an involvenent of objects; and intricacy from a winding and conmed involution. What is complex must be decomposed; what is complicated must be developed; what is inericate must be un ravelled. A proposition is complex; sffairs are complicated; the law is intricate. Com

$$

- Crabb thus discrioninates between com pliance, conformity, yielding, and submission "Compliance and conformity are voluntary; yielding and aubmission are involuntary. Com pliance is an act of the inclination; convornity an act of the judgment : compliance is altogether optional ; we comply with s thing or not at pleasure: canformity is binding on the conscience; it relates to inatters in which there is a right and a wrong. Compliance and conformity are prodnced by no external action on the mind; they flow spontaueonsly from the will and understanding: yielding is altogether the result of foreign agency." (Crabb: Eng. Synon.)
* oóm-pli'-qun-çy, s. [Eng. complianofe);-y.] A disprosition or inclination to comply with the wishes of othera.
"His whole bearing betokened compliancy, . . ."-

Botary:

1. A leaf in which the petiole hranches, each uranch terminating in a perfect leaf, generally called a leaflet.
2. A leaf, the divisiong of which sre srticulated with the petiole. This latter defmition is by may considered hetter than the former one, as with it simple and compound leaves rarely exist in the same natural assemblsge, while if definition l be adopted they often do. If definition 1 be adopted the leaf of the orange is a winged simple leaf, but it 2 be preferred it is, as theoretically it ought to he, a compound one.
compound membranes, s. pl. (For definition see extract.)
" Uuder the title compround menbrunes we include those expalusions which form the exteruhi integument ternal passages which, by their in volutions, contribute to form the various secreting orgaus or glands. they conssituto the skin alld mucous membranes, witb
the various glandular organs which open upon their aurface. Hairs and nails, peing hardered cuticle, are justly regarded as appondages to the former."-Toda \&
compound miorosoope, $s$.
Micros. : A microscope made up of a combination of lenaes arranged in a tube. [Microscope.]

[^166]compound motion, s. [Motion.]

## compound numbers, s. pl.

Algebra: Such numbers as can be divided by aome other number besidea unity without leaving a remainder, as 12, which can be divided by $2,3,4$, and 6 .
compound pier, s. A clustered column.

## compound polype, 8 .

Zool.: A polype consisting of a multitude of individuals associated together into a single organism, what may be called the young, produced by gemmation, remaining adherent to the parent, very much as branches remain connected with the trunk of the tree which sent them forth. The Sertularix, the Fluatre, the Corals which form reefs, \&c., belong to this division of zoophytes. (Owen, dc.)

## compound quantities, s. pl.

1. Algebra: Such quantities as are joinen by the signs + or - , or are expressed by nore letters than one.
2. Arith.: Quantities consisting of more denominations than one, as pounds, shilhugs, and pence; pounda, ounces, sc., whence the aeveral operations of division, subtraction, sc., of anch quantitiea are known as compound division, compound subtraction, de.

## compound radical, $s$.

Chem.: A radical which operates as if it were but single, while analysis shows it to be really composed of two. Example, Cyanogen.

## compound rail, s.

Engin. : A rail made of several portions with a longitudinal joint, avoiding the transverse joint across the rail whereby the jarring is occasioned ; a continuoua rail. Also applied to several forms of rails which consiat of a number of portions bolted or keyed together. (Knight.)
compound ratio, s. The ratio of the product of the antecedcuts of two or more ratios to the product of the comsequents : thus if $3: 6:: 4: 12$, then $12: 72$ is the compound ratio.

## compound rest, $s$

Mech.: The twol-carrier of an engine-lathe, moved Tongitudinally (along the work) by the leading-screw, actuated by the feed; and transversely (to or from the wurk), by its own feed-screw. (Knight.)

## compound screw, $s$.

Mech. : Two or more serews on the same axis. When the pitel of the respective screwa varies, it forms a differential screw; when they run in different directions, it is a right and left screw.

## compound spike, s.

Bot. (Of inforescence): A apike consisting of amall gecondary spikelets.
compound spirits, s. pl. Rectified spirits to which has heen added one or more favouring ingredients. They are called also componits. The chief componnds are gin, British brandy, and British rum. Cordiala and liqueurs, such as curaçoa, lovage, cherry braudy, Noyeau, rum shrul, \&c., are also debraudy, Noyeau, rum shruls, \&c., are also deby adding to clean rectified apirit various essences or oils, and sweetening with augar or syrup. Sweetened componnds asually contain from 20 to 35 per cent. of proof spirit. ( $W$. Harkness, F.C.s.)

## compound steam-engine, $s$

Mech.: A form of steam-engine originally patented by Hornllower in 1781 , in which steann at a relatively greater pressure was allowed to expand in a small cylinder, and then, escaping into a larger cylinder, to ex. pand itself ngainst a larger piston. Compound engines are of two classes, which may be called combined and independent compound engines. The former are thoae in which the cylinders tre ncar each nther, and the pistons commence their respective strokes simultaneously or nearly so, the steath expanding from one cylinder direct to the other through as small a passage as convenient. To this class belong most land engines, and the compound inariue with cranks at about $130^{\circ}$. (Knight.)
compound stops, s. pl.
Music: Organ stope having more than one rank of pipes. (Stainer it Barrett.)
compound times, s. pl.
Music: Times in which the har is divided Into twa or more groups of potea, e.g., I, which consists of two groups of three notes; $\%$. which consists of three groups of three notes, \&c. Compound times are classified as duple or triple, according to the number of groups in triple, according to the number of groups in
each bar, not according to the number of each bar, not according to the number of
notes in each group; e.g., $\frac{\text { g }}{6}$ is a duple time, notes in each group; e.g., $\frac{6}{5}$ is a duple time,
a triple time, a triple time, $\frac{18}{2}$ (four groups of three) a
duple time, \&c. The principal accent fails on duple time. \&c. The principal accent fails on
the first note in each bar, and $n$ subordinste accent on the firat note of each group.

## compound umbel, $s$.

Bot. (Of inflorescence): A kind of inflorescence in which the umbel divides into two or more smaller umbels, as in Heracleum. The umbel thus dividing is called the universal one, and the othera the partial umbels.

## compound word, s.

Gram.: A word composed of two or more words, according to certain rules.
corm'-pound (2), s. [Etym. doubtrul ; a corruption of Port. campanha = a yard, a court, or, more probably, of Halay campong = an inclosure.] A ternapplied in India to the yard or enclosed space aurrounding a dwelling.
$\dagger$ com-pound-a-ble, a. [Eng. compound; -able.] Capable or admitting of being compounded.
"A penalty - dickenspoundable for a tern of Im(Daviea)
cóm-pound'-ĕd, pa.par. or $a$. [Compornin, $v$.] A. As pal. par.: In senses corresponding to those of the verb.

*3. A summary, epitome, or collection. "Though not a catalogue . . . a comprehention of

## II. Figuratively:

1. The sct or process of grasping or seizing with the understanding.
2. Thst faculty by which ideas are grasped orseized with the understanding; intelligence, capacity of intellect.
B. Technically:
3. Logic: Those attributes which make up the notion expressed by s general term.
4. Rhet.: A figure of speech by which a part is put for the whole, the whole for s part, or a definite number for sn indefloite.

II Comprehension Scheme:
IIisf.: A scheme for comprehending within the Engiish Church the Puritin as well as the Anglican party. An effort was made in thia direction in 1689 . A bill for sltering soms points in the liturgy to which exception was taken by the Nonconformists passed the House of Lords in 1689. But Convocation, when aummoned at the instance of the House of Commons to diacusa the scheme, ended by rejecting it. An attempt of the same kind msde in Scotland in 1678 had been equally unsuccessful.
oðm-prŏ-hĕn'sive, a. [Fr. comprèhensif, as if from s Lat. comprehensivus, from comprehensus, pa. par. of comprehendo.]

1. Extending widely ; including or compre hending many things; extensive, wide, compendious.

- Reverend and wise, whose comprehensive piow
 2. Hsving the power of grasping msny things with the understanding; quick, scute, sharp of intellect.
"In trutb, he nuited all the qualities of ${ }^{n}$ great Indge, Macaulay: Hist. Eng.. olh. xx.
TI Crabb thua discriminatea between comprehensive sud extensive: "Comprehensive respects quantity, extensive regards space : that is compreheusiee that comprehends much, that is extersive that extends into a wide field: a comprehensive view of a subject includea all comprehensive view of a subject includea all
brsuches of it; an extensive view of a subject outers into minute details : the comprehensive inters into minute details: the comprehensive is associated with the concise; the extensive
with the diffuse: It requires a capacious mind with the diffuse: It requires a capacious mind
to take s comprehensive survey of any subject; it is passible for a superficial thinker to enter very extensively into some parts, while ho passes over others. Comprehensive is employed only with regard to intellectual objects; extensive is used both in the proper or the improper sense: the signification of a word is comprehensive, or the powers of the mind are comprehensire: a plain is extensive, or a field of inquiry is extensive." (Crabb: Eng. Synon.)
oơm-prĕ-hěn'-sǐve-ly̆, adv. [Eng. comprehensive; -ly.] In s comprehensive manner; widely, extensively, compendiously.
"The law itself, comprehensively taken."-Goodwin:
0ơm-prĕ-hĕn'-sǐve-nĕss, s. [Eng. comprehensive; -ness.] The quality of being comprehensive.

1. Vsriety.
"Comparo the heaaty and comprehensiveness of legend- ou ancient oollus. "-Adition: On Ancient
2. Extent, wideness of range and significance.

* corm-př̌-hðn'henous, pe. par. of comprehendo.j

Old Divinity: One who in proficient, or who has sttained to s full snd perfect knowledge of the truth.
 heaven! comp

* oom-prend', $v$. [See def.] An old variant of comprehend (q.v.). (Chaucer.)
* oơm'-prěs-by̆-tẽr, s. [Pref. com = with, together, and Eng. presbyter (q.v.).] One who is jolned or associsted with others in offlice as \& presbyter; s fellow-priest.
"Cyprian in many places : . : speaking of presbyters, caiom ble. i.
* comm-prŏs-by̆-tër'-1-al, a. [Eng. compresbyter - -ial. 1 Of or pertaining to a compres. byter; common to sny priest with others.
cóm-prĕss', v.t. [From Low Lat. compresso $=$ oppress : com $=$ cunt $=$ with, and presso $=$ to preas, from pressus, pa. par. of premo $=$ to press. Or from pref. com = with, together, snd Eng. press (q.v.) (Skeat). Sp. comprimir Ital. comprimere.]
I. Lit.: To squeeze or press together ms terial things; to force, press, or drive into a narrow
II. Figuratively:
L. To reduce or bring within parrower limits, to narrow. (Of immsterial thinge.)

And bis whole figure breathed intellitente
Into a uarrower circle of deep red."
*2. To have carnsl intercourse with, to embrace.

* 3. To restrain, to keep down.

The adverse winds in leathern bags he hracid.

4. To reduce within narrower limita, to abridge, to make concise. (Applied to lsnguage, writings, \& c .) "The esnue streusth of expression, though more
compresed. runs throug
his bistorical haranguea,
-5. To reduce.

> "Comprew the eum in to to solld worth""
cơm'-prĕss, s. [Fr. compresse.]

1. Surg.: A pad of folded soft linen, used with s bandage to preaerves due pressure on s. wound.
"I appllied an intercipient about the ankle and upper part of the foot, and by compreas and bandago arested it up- - inseman.
2. Mach. : A machine for re-pressing cotton bales.
cóm-prĕssed, oom-prest, pa. par. or $a$.
A. As pa. par.: (See the verb).
B. As adjective:
I. Ord. Lang. : Pressed together, condensed, narrowed.
II. Bot. (Of a seed): Flattened lengthwise, as distinguished fron depressed, which means flattened vertically. The legume of the garden pea is compressed.
compressed-air, $a$, \& s.
Compressed-air Engine:
Mech. : An engine driven by the clastic foree of compressed air. Its construction is ususliy like that of a steam-engine, the force of the expanding air being exerted sgainat a piston in a cylinder. (Knight.)
cotm-prěs-sǐ-hĭl'-i-ty̆, s. [Eng. compressible; -ity.]
3. Ord. Lang. : The quality or condition of being compressible; capability of compression. 2. Nat. Phil. : The property in virtue of which the volume of a body nay be diminished by preasare. It is produced by its porosity. The most compressible bodies are gases, which may be reduced in this way to 10,20 , or even 100 times as little space as they previously occupled. If, however, very great pressure be spplied, the tendency is for the gas to become fluid. Liquids wers long thought to be incompressible, which is not accurate. Solids vary greatiy in compressibility ; tndia-rubber, cork, ivary balla, \&c., are very compressible. (Ganot.)
oóm-pras'-si-ble, a. [Fr. compressible.] Capable of belng compressed or forced into a narrower compass, or with

golitary, othera Con-causal." Stanley: Hise. Phitos., p. solitary, othera Con-causal."-Stanley: Hist. Philos., p.
s12.
B. As subst. : A concause or joint cause. "The connequent and conoaruath ario saduod to
cŏn-eânge', \& [Pref con, and cause (q.v.).] A jolnt cause
the roit mank ing tit in offoec tha only trus cenumo of ent the reit ;and all the rent to be rather es lustrumeuta, p. 228 .
- cön-cā-vä'-tion, \&. [As if from s Lat. concavatio, from conoavus=hollow.] The act of making concave. (Bailey.)
adn'-cāve, a. \& s. [Fr. concave; Prov. concau; Sp., Port., \& Ital. conouvo; from Lat. concavus $=$ hollowed out, arched, curved : con - with, fully, zad cavus = hollow, hollowed.]

## A. As adjective:

I. Ordinary Language:

1. Lit.: In the same sense as II.

## 

Shokets.: Jullu Cosar, 11

- 2. Fig.: Morally hollow, insiacere.
 II. Geom., Optics, ecc. : Having s curve or surface hollow on ons side, that side being the oas turiced to the spectator's eye. It is opposed to Convex (q.v.). It is used specially of lenses and mirrore curved in this way. [Leves, Mirror.]
B. As substantive:
I. Ord. Lang.: Anything hollow with the hollow part fronting the spectator's eye. Spec., the vault of heaven.
"The beoding concave form'd an arch before""
II. Mach.: The curved bed or breasting in which a cylinder works, as in the thresher.

## concave brick, s.

Brick-making: A brick used in turning arches or curves; a compsss-brick.

## concave lens, s.

Optics: A lens hollow or depressed in the middle. It is of three kinds (1) a plano-concave lens, in which one side is plane or flat, and the other hollow, (2) a coacavo-coavex lens, in

concave lenses.
1 Planoconcerve. 2. Coacaro-convex. 8. Douhle
which one side is hollow or concave and the other raised or convex, and (3) a double concave lens, in which there is a hollow or depressioa on hoth sides. Spectacles with doubly concave glasses of equal concavity on each side sre used for near-sighted persons.
concave mirror, $s$.
Optics: A hollow mirror. Its effect is to reflect the rays of iight, concentrating them on a particular focus, as does a doubly convex leus.

## concave plane, s.

Carp.: A compass-plane for smoothing curved surfaces.
*cŏn'-cāve, vit. [Concave, a.] To make concave or hollow. (Sevard.)
cŏn'-cāved, pa. pat. \& a. [Concave, v.]
I. Ord. Lang.: (See the verb).
II. Her. : (See example).
"Concaech, ordioarlez, Au., when bowed in the form Heraldry.
cŏn'-cāve-nĕss, s. [Eng. concave; -ness.] Hollowness, concavity.
cơn'-cā-ving, pr, pur. [Concave, v.]
cŏn-ăav'-1-ty̆, s. [Fr. concavite; Prov. concavitat; Sp. concavidad; Port. concavidade; from Lat. concavitatem, sccus. of concavitas.] The state of being concave, concaveness, hollowness.
coro-oā'-vō, in compos. [Lat., from concavue.] [Concave.] The first term in two compounds which follow.
coneavo-concave, $a$.
Geom., Optics, \&c.: Coacave oa hoth sidea.
conosvo-conver, $a$.
Geom., Optics, dcc: On one side convex, on the other concave.
"I procured another concavo-convex piate of glases,
ground on both sides -Newton.
Concavo-conver File: A file with curved fsces, respectively coacave and convex, mada by cutting s flat file and then bending it into shspe between dies. The mode is the inven. tion of Sir John Rohison, Presideut of the Scottish Society of Arts, sad is desigued to Scottish society of Arts, sad is desigued to file by a chisel which reaches across the edge, fils by s chisel which reaches scross the edge,
instead of by cutting numerous courses, which usually cover the convex surfaces of flee.

## Concavo-convex Lens, [Concave Lens.]

- cơn-cā-voŭs, a. [Lat. concavus.] The same as Concave, a. (q.v.).
"The coneaoous part of the liver was called"-A Arol-
"cơn-cä'-voŭs-ly̆, adv. [Eng. concavous; -ly.] Hollow on the side preasated to the eye; presenting the aspect of a hollow sphare.
 Vulgar Etrours, hk. v., ch. i .
cön-çēar, " con-çel-en, * con-çell-en, v.t. \& i. [Lat. concelo : con $=$ cum $=$ with, together, sad celo $=$ to hide.]
A. Transitive:
I. To hide or cover from sight or observation. ". . . neither thalt thou spare, neither shalt thon

2. To keep secret or hidden; to keep back from publicity or utterance.

> This malady, I well could nuark.
> $\begin{aligned} & \text { Eprung irom some direful carse nod derk; } \\ & \text { But etill he kept its evurce concealed. }\end{aligned}$

With from before the person kept is fgnorance.
"Hit shal nct from yow be conceiled.". ${ }^{\text {Herlin. }}$. 64 ,
B, Intransitive:

1. To hide or keep back from publicity or knowledge; to keep close, not to divulge.
"Thou hast to me conceled
That my iorde hath with other deled. "

* 2. To be or remaia hidden or secret.
(1818), vol thing p. 214 conceah"-Ferrier: Marriage

I (1) Crabb thins distinguishes between to conceal, to dissemble, and to disguise: "To conceal is simply to abstain from making known what we wish to keep secret; to dissemble and disguise signify to conceal, by assuming soms false sppearsnce: we conceal facts; we dissemble feelings; we disguise sentiments. Caution oaly is requisite in concealing: it may be cffected by simpie silence; art and address must be employed in dissembling: it mingles falsehood with sll its proceedings ; labour and cunning are requisite in disguising: it has nothing but falsehood io sll ics ing: it has n
movements."
(2) Ha thus discriminates between to conceal, to hide, sud to secrete: "Concealing has simply the idea of not letting come to observation; hiding that of putting under cover; secreting that of settiog at a distance or io llafrequented places. Whstever is not seen is cancealed, but whatever is hidden or secreted is intentionally put out of sight: a lerson conceals himself behiad s hedge; he hides his treasures in the earth; be secretes what he has stoleo under his cloak. Conceal is morr general than either hide or secrete: all things gre concealed which sre hidden or secretcd, but are not alwsys hidden or secreted when they are concealed. Both mental snd corporeal objects are concealed; corporeal objects mostly sud sometimes mental ones are hidden; cor poreal objects only are secreted: we conceal In the miad whatever we do not maks known ; that is hidden whicis may not be discovered or cannot be discerned ; that is secreted which may not be seen. Facts sre concealed, truths are hidden, goods sre secreted." (Crabb: Eng. Synon.)

- cotn-çēal'-a-ble, a. [Eng. conceal; able.] Capsble of being concealed, hidden, or kept closs or secret. (Browne: Vulg. Er.,bk. i., ch.ii.)

 38
odn-çeale, v.t. [Conceris, v.] To conciliate, to reconcile.
Thus man to God, earth to conceals to hawverr.
In time's full terme, by him the Bonno was given.
cón-çêalea', pa. pat. or a. [Concear, v.]
II Concealed Lands: Lands which had been concealed from ths commissioners for the dissolution of the monasteries in the reign of Henry VIII.
"Concealers are such as nide ont lands concraled, Khag hy common persons, having nothing to show for

cǒn-çeal'-ěd-1y̌, radv. [Eng. concealed; -ly.]
In a secret or concealed manoner; secretly, not openly. (More.)
- cŏn-çēal'-ĕd-nĕss, s. [Eng. conccaled; -ness. The quality or state of being concesled or hidden; secrecy, privacy.
cotn-çēal'-èr, s. [Eng. conceal; -er.]

1. Ord. Lang.: One who or that whicb conceals or keops secret.
2. Odd Law: One who gave information respecting "concealed lands" or "coucealments ; " sa ioformer.
"By the others she restrailed a most ravenaus sort of men, whorn they call comeadera, by revokng their comumission, and forcing them to restore what they
 lestions avarice, to geize opori inds tivan to times
 p. 186 (1689).

* côn-çéal'-ẽr-ěss, * côn-çēal'-ẽr-ěsse, s. [Eng. concealer ; ess.] $\Delta$ womsn that conceals or hides.
" Receletesse. A concealeresse."-Cutgrave.
cön-çēal'-ǐng, pr. qut., a., \&\&. [Conceal, v.] A. \& B. As pr. par. \& particip. udj.: (See the verb).
C. As subst.: The sct of covering, hiding, or keeping secret; concealment.
originally or casually aming, ...-Bp. Taylor: 4 rtif Hantsoc p. 163.
- Concealing a birth is s legal misdemeanour, concealment of title-deeds to land or of wills a felony
"cồn-çēal'-měnt, * cônn-çēle'-mĕnt, *con-sail-ment, s. [Eng. conceal; ment. Cf. tal. celamenta.]
I. Ordinary Language:
I. The sct of hiding, concealing, or kesping close.
"Few own such wentimants ; yet thls concealment derven - Glarivie the fens or man than or any Being

2. The state of being coacested or hidden; secrecy, privscy.
"I yoo know sught which does behove my knowledge
In fgrorint concertment
A hiding. phacesp. Winter's Tato, Li 2
3. A hiding-place, or place where anything is kept out of sight or secret; a retreat, cover, or shelter.

Cormmit their teehlo offgprlag; the eleft treo Urars its kiud concealment to a fomion: spring.

- 4. Secret knowledgs; mystery.

In stranke conceulments.
Law: Shazesp: 1 Henry /F., iliL i.
II. Law:

1. A suppression, or keeping bsck of matters insterial to the issue.

* 2. The holding of land against the king's Aghts, by a person without proper title.
II Crsbb thus distinguishes between concealment and sectecy:-"Concealment has to do with what concerns others; secrecy with that which concerns ourselves: what is concealed s kept from the observstion of others; what is aecret is known only to ourselves: therg may frequently be concealment without secrecy, aithough thers canoot be secrecy withont con. cealment: concealment is frequently practised to the detrimeat of others; secrecy is slways adopted for our own advantags or grstification: concealment is serviceable in the commission of crimes; secrecy in the execution of achemes: many crimes sre committed with Impuoity when tho perpetrators are protected by concealment; the best concerted plasos ars often frustrated for want of observing secrecy."
cồn-çēde', v.t. \& f. [ [Lat. concedo: con = cum $=$ with, together; codo $=$ to yield.]

## A. Transitive:

I. To yleld, to give up, to surreader.
"The first is, pettifo principid, which fallacio in committed, where that in mesumed na a principle, to prove Arowene : Vuigar Errours, bl. i., ch. Iv.
2. To sdmit, to grant, to sllow to pass undisputed.
"If this be coinceded and I do not see how Mr. Moaley can svold the couceakion-it deatroye the necesity of all: frag. of scionce ( 3 ri ed.), iii. 52
B. Intransitive :
I. To grant, to admit, to sllow.
"Wo concode that well-love if tho strongest and most

* 2. To give way, to make concessiona,
when sho wished you to concede to Amarica, at s time 8peech at Erizato previous fo the Election
côn-çēd'-ěd, pa. par. \& a. [Concene, v.]
* cón-çè'-dençe, s. [Lat. concedens, pr. par. of concedo.] A conceding, yielding, or giving way; s concession.

Alif had to apprehend was, that a danghter, so eiluctantly carried ofit would offer terms to her father. Richaruson: Clarissa, voL. iii, let, 13. (Datiee))

* côn-çē'-dent, a. [List. concedens.] Coaceding, yielding, or giving way.
cón-ce' $\bar{\prime}$-dĭng, pr. par., a., \& s. [CONCEDE, v.] A. \& B. As pr. yar. \& particip. adj.: (See ths vert)
C. As subst.: The act of yielding or admitting; concession.
* con-çeil, * con-çeill, v.t. [Lat. concilio.] To conciliate, to reconcile, to sccommodate. thame - und lang as the samyn rancour continewis with nychtbouris, ...."-icts Ja. VI., 153s (ed. 1814), ph 13.3.
* con-çeil-lit, pa. par. or a. [Conceil, v.]
cón-çeit', * con-çelpt, a $[\mathrm{O}$. Fr. concept, conceit, pa par. of concevoir = to conceive; 1 tal concetto; Sp. conceto, from Lat. conceptus, pa. par. of concipio $=$ to conceive : $\operatorname{con}=$ to gether; capio $=$ to take, to receive.] [Concerprion, Conceive.]
* That which is conceived or lmagined o tre miad; s conception
(1) Aa opinion or judgment.
. . . wise fa his awn concelf .. .--Provi xxvili. 11
(2) A thought, sn idea.
"Dangerons conceits are, in their natures, polsons.,"
(3) A purpose or intent.
* 2. The power or faculty of imagining or conceiving in the mind; imsgination, fancy, apprehension
"I shall be found of a quick comecis in jadgment.
*3. A liking or estimation; sn opiniou.
"The king hath of your" fare fair conceit

4. Affection or regard,
"He began partiy hy confecture nod partly by p. 18

* 5. A person or thing to which one takes a fancy or regard.
* 6. A feeling of the mind or heart, especlslly sorrow or grief.

* 7. A fancy, whim, or notion taken uyon slight or fanciful grouads.

He, while ha labonr'd to be thonght \& god
Conceipet, and into burning Aetna leapy.
B. Jonson: Horace; Art af Poetrie.

* 8. A qusint, fanciful, or witty notion, thought, or turn of expression.
courtiers of miae own order and canpacity whome gay ceith are hriglit and vivid as the lightniog. ...onscott: Monastery, ch $\mathbf{x} \mathbf{v i}$
If As thonghte which their anthor deams happily conceived are often far-fetched, the word conceit is not now a term of unmixed commendation.
Talmuderatat and acholts no pedantle quatationts from Eng., ch. xiv.
* 9. A qusint, frotastic, or grotesque figurs or ornsment.

10. Undue, excessive, or opinionative eatimation of oneself ; self-pride.
"Geologr propounds meny a hand queation to the
atudento-questona quito hard and dificult enongh to keep down their conceit, unless, indeed, very lerb to and its Peopth, ch $x$.

* 11. Perhsps extraction, birth (hom conceive, $A$. 1)

I know you are a gen tlemnn of good eonceris",

- 12. A style, patisrn, or destgn
"Most delieate carriages, and of very liberal concerts"
In conceit with: In agreement or concord with.
" It he wero in conceite ooy $h$ tho kynge's grace, thes , inted and perawaded, d corrupt wine with citte
- forming sigzags and enclosiog apacen of a great
 vol. L, eli. viL, p. 154
Out of conceit with: No longer fond of on incliped to.
To put one out of conceit with: Todraw their affections or inclinations awsy from; to dis satisfy with.

What hath chiefly put me out of concelpt utich thin Suift.
To pride, to humble
"The numestst of these persous was abla to have

cö̀n-cètt', v.t. \& t. [Concert, 8.]
A. Transitive:
I. To conceive, to imagine, to fancy, to smppose; to judge or estimste.

- My credit now stands on such elippery ground,

That one of two bad ways you must oconcoit te.
2. To take or have a liking for; to be disposed towsrds.
B. Intrans. : To imagine, to fsacy, to conceive, to form $s$ aotion, to gucss.
"That the goodness of the Lord belng lnflulte, the aimmonly conceite"-Dr. A. Alure: Div, Dialoantes ${ }^{\text {an }}$ ". for 'tis too coarse and alovenly to concett, that heese hry clarted on thera."-Annom on Bp. Euuts
côn-cēit'-ĕd, pa. par. \& a. [Conctit, 8.]
A. As pa. par.: In senses corresponding to Bes of the verb
B. As adjective

* 1. Endowed with conceit or quick appre hension; intelligent, quick, imagioative
"Which the conceited painter drow so prosd,
As heaved (it seem Shakesp: : Tarquin \& Luvereos.
* 2. Witty, playful, incliaed to jest, merry.
* 3. Fsociftul, ingentous, fantastic.
"A conceited chair to sieep in with the leys stretched
out."-Evelyn : Nomoirn, 1115 .
"Oft dld she heare her napkin to her eyno

*4. Fancied, existing only in the imaginstion.
"But thers were many conceited goda: it may bo tis beionged to some 1dol, af Peor to Bat, and Ekro the Living God. -7 . Adams: Serm. (1618, $p$. 4

5. Full of conceit; fnordiustely vale or prond of onegelf or of some quality or attrioute; opinionsted, egotistical.

- With of before the sulhject of conceit.
"The reasons are thess: First. there fo no otber
civlized nation which is so concelted of its own inglu civllised nation which hu so concelted of its own instu-
tutiond, and of sill its inodes of public action

* 6. Fastidious, nice.

7. Flighty, silly. (Provincial.)
"If he be so concrited and so fond
To entertaln a shadow.
ns Triumph, ii

- 8. Patterned, dcsigned.
"Three liberal conceited carriages." - Shakeop.
còn-çèit'-ěd-Ĭ̌, adr. [Eng. conceited; dy.]
* I. In a manaer happily concsived ; wittily
* 2. In a fanciful or whimsical fashion fancifully, whimsically.
"Concoitedly dreas her, Donne: 'Poeme, p. ILs.

3. In a conceited, vaio, or self-prond manner.

cŏn-çĕu-trā'-tion, s. [Fr. concentration.] A. Ordinary Language:
I. Literally:
7. The act or process of concentrating or gathering together to one centre or focns.
"All circuiar bodies, that receive a concentration of Peacham: Compleat Gentleman
8. The state of being concentrated.
"Concentration is when $t$ wo or mare atomes touch by receptlun and fotrision of one minto another: Which
bis the closest and frmest mirture of all."-Grew: is the closest and frmeat mirture of all."-Grew. II. Figuratively :
9. The act of concentrating the thoughts or mind on a aingle object or point.
thought which demand no intense concentration of

10. A compression or condensation
"The forts [pictures] were a muftiplitention of one ainters, vol. L., pt. 11. ch. 111. , 822
B. Chem.: A process which has for lts object to increase tha amount of a diasolved substance in a liquid, relatively to the quan-
tity of the solvent, without adding any more of the dissoived aubatance itself. When the solvent is volatils this object is effected by sovaporation, as when water, alcohol, or ether avaporation, as when water, alcohol, or sther
is expelled from a solntion by heat, by expois expelled from a solntion by heat, by expo-
sure to the air, or in vacuo. If tha dissolved sure to the air, or in vacuo. If the dissolved substance ta more volatile than the aolvent, the concentration is effected by distillation, the more concentrated liquid being then found in the distillate, as in the rectification of hydrated alcohol and of volatile oils dissolved in water. In the case of aqueous liquide, concentration is sometimes effecter by freezing out the water; in this manner a strong solution of salt may be obtained from gea water atrong apirit from vinous liquids, \&ic. A similar principle is applied to the separation of ailver from lead, The argentiferous lead is melted and left to cool till about two-thirds of melted and left to cool till about two-thirds of the mass is solidified. This consists of neariy pure lead, the portion which still remains liquid being an alloy richer in ailver than tha
original mass. By repeating this operation original mass. By repeating this operation
several timea the ailoy at last becomes suff ciently rich in ailver to be treated by cupella tion. (Watts: Dict. Chem., vol. i., p. 1107.)
cŏn-çĕn'-trä-tive, a. [Eag. concentrate); -ive.]
11. Able to concentrate or fix the mind on one point or subject.
"It was his concentrutive hahit of mind and his etirring tomperament which brought bim into thil
12. Serving to concentrate, concentrating.
cơn-çén'-trā-tǐve-něss, s, [Eng. concentrative; -ness.]
Phrenol.: The power of concentration; the facuity of fixing the attention or thoughts on say one subject or point.
"I posseased, eved ns a child, an unusual share of of sbsorptivn, of self-forgetfulness, was , The power time source of delight and a torment.,-Bayard Taylor: : Home and doroad (2nd ser.h vii.. 1. 43.5
cŏn'-̧̧ĕn-trā-tõr, \& [Eng. concentrat(e); -or.]
13. Ord. Lang.: Ons who or that which concentrates.
14. Min.: An apparatus for the aeparation of dry, comminuted ore, according to the gravity of its particles, by exposing a falling sheet of ore-dust to intermittent puffs of air (Knight.)
cŏn-çĕn'-tre, " cŏn-çĕд'-tẽr, v.t. \& i. [Fr. consentrer; Lat. con $=c u m=$ with, to gether; centrum =a centre.
A. Transitive:
15. To bring together to one point; to concentrate.

In thee concenering all their procions beams
2. To fix intently or ateadily on any object or point.
"The having a part leas to anjmate, will serve to
concentre the spirits, .. Concentre the spistian Piety.
B. Intransitive.

1. Lit.: To tend to or meet together $\ln$ a common centre; to have a common centre.
$\therefore$. . the sides afterwands join to clowely, and the poiots concentre so exactly, th
entire piece. - Sir
B. Wioton

Aud keep la tune with hear'n, till God ere long
To hla celostial concert us uniten
To ble celestial concert us unite"n Solemn Mrusic.
II. Music: An entertainment in which a number of persons or instruments, or both, take part.
II A concert or consort of violsia the fifteenth and sixteenth centuries was a quartetor other number of atringed instraments performing in concert. (Grove.)
I Concerts of music to which the public are admitted by payment are of comparatively receat origin in the history of musle. The advertisement of the first London concert cuns as follows: "These are to give notice, that at Mr. John Barrister's house (now called, the Musick School), over against the 'George" Tavern, in White Fryers, this present Monday, will be muaic performed by excellent masters, beginning precisely at 4 of the clock in the afternoon, and every aftemoon for the fnture, precisely at the same hour."-London Gazette, Dec. 30 th, 1672 . (Stainer \& Barreti.) The first concerts known to have taken place were performed et Viconza by the Filermonici in 1565. There was a oubscrintion concert at Oxford in 1665. The first in London was the
one mentioned by Stainer and Barrett as taking place in 1672, but they did not become an institution of the metropolja till the rise of the Academy of Ancient Musio in IIIO. [OraTORIO.]

## concert-pitch, s.

1. Literally:

Muste: A term for the pitch formerly used st concerts, a trifle bigher than the ordinary pitch, for the sake of giving additional brilliancy,
2. Fig.: The exact or proper degree of exactness or correctness.
concert-room, s. A room in which con. certs are given.
cŏn-çêr-tan'-tê (ç es çh), s. [Ital.] A term applied in the eighteenth century to orchestral compositions in which there were apecial parts for solo iustruments, and occasionaily to campositions for solo inatruments withont the orchestra. It is now generally used as an adjective, indicating certalo prominent solo parta in an orchestral compoaition, which are spoken of as "concertante parts." (Grove)
cőn-çẽr-t̄̄'-tion, s. [Lat concertatio, from concerto $=$ to strive together : con $\Rightarrow c u m=$ with ; certo $=$ to strive.] A striving or contending; strife, contention, contest.
the like. . ."-Goodwin: Workes III. iins 803 games or
cŏn-çẽr'tā-tǐve, a. [Lat. concertutivus, from concerto $=$ to atrive together.] Quarrelsome, contentious. (Bailey.)
cón-çc̃rt'-ěd, pa. par. or a. [Concert, v.]
A. As pa. par.: In aenses corresponding those of the verb.
B. As adjective:

1. Ord. Lang.: Agreed on, mutually planoed or devised.
ofgrala to two of the phrty proceeded with concerted

2. Music: Applied to a compoition arranged in parts for several voices or instraments, as a trio, quartet, \&c.
"The term Sonata was formerly applifed to short concerted pieces for three or four btringed instru-
meote, "-Ouseley: Musical Form, ch. xi., p. 54.

2. Zool. : Lamarck's designation now generally adopted for the great class of Mollusea containing the apecies which possess ordinary bivalve ahells. Cuvier arranged the Conchifera with Salpa and other naked molluses into a clasa acephala-i.e., Headless Animals-so called becanse they have no apparent head, but a mere mouth concealed in the bottom or between the folds of their mantle. He placed them in an order Acepbala Testacea, distin gutshing their shellass associates as Acephala Nuda. From their possessing four branchial lamellæ or leafleta, De Blainvilie called them Lamellibranchists, a name atill much in use; it is the designation Profeasor Euxley
retains for the class: Their body is included within a mantle or pallium, formed by a prolongation of the dorsal fnteguments ; there is
a woll-developed heart, gouerally with two a. well-developed heart, gencrally with two
auriclea and one ventricle, or with one of each auricles and one vantricle, or with one of each
or even two of esch. Some have a conspicuor even two of esch. Some have a conspicu-
ous foot. They have blvalve ahelle of the normal type, which as a rule have the right and lett val ves nearly of the same aize and ahspe, and both more or less inequilateral, the anterior being much ahorter than the poaterior aide. This distingnishes them from the Brachiopoda, in which the bivalve abells are as a rule unequal in size, but pach singly equilaterai. [Brachiopoda.] The valves of a Conchier are bound together by an elastic ligament, and ere jointed by a hinge furnished with interlocking teeth. Near each hinge is an umbo, i.e., a boss or beak, which was the point whence the growth of the shell originally took place. The length of a valve is measured from the anterior to the postarior aide, its breadth from the dorsal margin to the base, ita thickness from the centre of the closed valves. Bivalve shells are said to be shut when the valvea fit exactly, and gaping when they cannot be completely shut; the onter gide has often ribs radiating from the umbo to the margin or concentric ridges. Inaide the margin of the shell on which the ligament and teoth are situated is the hinge-line. The adductor muscles, the foot hinge-hine. the adductor muscles, the fioal and byasua, the siphons, an
3. Palcont.: Fossil bivelves are found in moat sedimentary rocks. They are somewhat rare in the earlier formations, but go on to increase throngh the Secondary and Tertiary Periods, reaching their maximnm in the present seas. They are geven times more numerons in the Newer Tertiary than in the oldeat geological aystema. (S. P. Woodward.)
conin-ohif'-err-oŭs, $\boldsymbol{\alpha}$. [Lat. concha (q.v.), i connective, fero $=$ to bear, and Eng. adj. ouff. -ous.] Bearing a ahell. (Pen. Cycl.)
cơn'-chi-form, a. [Lat. concha (q.v.), and forma $=$ form, shape.]

Bot. : Shaped like a single valve of a bivalve ehell. (Treus. of Bot.)
$\dagger$ cŏñ-chil'-1-oŭs, a. [Concevlious.]
cơn' ${ }^{\prime}$-chinn-ine, s. [An alteration in the relative positions of tho letters constituting the word Cinchonine (q.v.).]

Chem. : Also called Quinidine, $\mathrm{C}_{20} \mathrm{H}_{24} \mathrm{~N}_{2} \mathrm{O}_{2}$ an organic base isomeric with quinine, occurring in cinchona-bark. It cryatallises in bitter
colonrleas prisms, solubla in dilnte suiphnric coloulleas prisms, soluble in dilute suipharic
acld, the aolntion ahowing blue fluorescence, and its alcoholic aolntion giving a green colour with chlorine water and ammonia.
 dim. of кóyxך (kongchē) =a muscle or a cockle; $l$ euphonic, and anff. -in (Chem.).]
Chem.: An organic aubstance obtalued from ahella of moiluses by removing the calcium carbonate with hydrochioric acid. It is insoluhle in water, and does not form gelatine when boiled with water. It contains 50 per cent. of carbon, 6 of hydrogen, and about 16 jer cent. of nitrogen. By long boiling with dilnte aulphuric acid it yields lencin.

* cơnch'-īte, s. [Fr. conchite; Gr. кóyरך (kongchē) =a conch (q.v.), and sulf. ,-ite similar shell. [CONCH.] The modern palæontologist does not need the term ; he attempts, generally with success, to ascertain the genus and species of any fossil shell he may find, or, if it is new to aclence, gives it a name.
cornch-ǐt'-ic, a. [Eng. conchit(e); -ic.] Composed of or largely containing ahells.
 a nussel or a cockle, and $\delta \dot{f} p \mu a($ derma) $=$ skin.] Zool.: A genus of Cirripeds, family Lepadida. Conchoderma aurita of Darwin, Lepas ia frequently met with on tha bottom of ships ie frequently met with on the bottom of
returning to this country from abroad.
 $=$ a house, and adj. autf. -ia.J
Zool. : A genus of Entomostracans, the typical and only known one of the family Conchoeciadas (q.v.). Conchocia obtusata is found in Shetland. (Griffth \& Henfrey.)
 acia, and fem. pl, adj. suti. -idre.]
Zool.: A family of Entomostrscans, order Oatracode The inferior antennæ ere twoOranched, with one of the branchea rudimentbry, and immovable faet two pairs ; powterior onea rndimentary ; eyes nome. [Conczacia.] (Grifth \& Henfrey.)
 Gr. кoyxoetsjos (kongchoeidzs) $=$ of the museel kind: кójxך (kongchè) $=$ a shell; and atoot (eidos) $=$ form.]
Geom. : A cnrve discopered by Nicomedea in the second century A.D., and used by him for the finding of two mean proportionals. If a etraight line always passee through a fixed point o, and a point o, fixed into the revolving line, alwaye moves elong the line A B, then any point $P$ in the revolving line always at the same distance from Q will trace out a conchold. And, since the length $Q P$ can in any position

of the revolving line be measured either towards or from o, it is evident that, corresponding to any given length assigned to $O P$, two conchoids can be described, one above and the other below the line A B. These are known as the auperior and inferior conchoida. Moreover, with a given point 0 and a gived atraight line AB, any number of pairs of different conchoida can be described by vary. ing the length Q P. Moreover, the shapes of all such curves will vary according to the length of $Q P$. Thus, if $Q P$ is less than the perpendicular from o on A $B$, the shape is as given in the adjoining fignre, and the isolated point o is also a point on the curve.
cŏñch-oi'-dal, a. [Eng. conchoid; -al.]
Min.: Presenting a surface more or Jeas like the surface of a shell. Used of the fracture of minerala when they so break as to preaent on one fragment a concave surface like that of the interior of a bivalve shell, and on the other a convex one, like its exterior.
There are varieties of it-viz., imperfectly, and again perfectly, large, small, and flat conchoidal. (Phillips.)
 a shell-fith; doyos (logos $=$ a disconrse; and
Eng. suff. -ical ( $\mathrm{q} . \mathrm{v}$ ). J Relating to or in any way connected with conchology.
cŏñch-ŏl'- $\mathbf{\sigma}-\mathrm{g}$ gist, s. [Eng. concholog(y); -ist.] 1. Ord. Lang.: One who atudies or is versed in conchology.

2. Zool.: A namag given to the carrier ahella, from their oftell attaching shella to the margina of their whorls as they grow. (Ogilvie.)
 muscle or cockle, and dóyos (logos) $=2$ diacourse.] The acience of shella. Two wellmarked stages in its development arc traceable. At first shelle were atudied withont any reference to the animals of which thay conatituted the hard framework or akeleton. Suhsequently tha study took a wider scone, and for the first time becaue worthy of being called a sclence, when the animats and their shells were viewed as parts of one conmon whole. When ahella were looked upon as little more than ornamental objecta, those who atudied conchology were not generally of a high order of intellect; bnt since the rise of geology and the discovery that of all foasila geology and the discovcry that of all fonails information regarding the several atrata, and consequently regerding the history of bygone time, scientific minda of the very first class have given keen attention to ahella. Some of these belonging to land animale, othars to those

inhabiting fresh water，and the great majority to those which are marine，the fossil shells in a atratum constantly enehie the geologist to ascertain whether a atratum is the remains of a land surface，or a deposit from fresh water or the bed of a eea．Particular genera and pecies flourigh at certain fixed depths and when the geologist finds analogons fossil hells，he is able，startling as it may appear rithi certain limits to sound the deph particular apots of a primeval and now long particular spo
When shella，and ahells alone，were atndied， conchology was a not unsuitsble name，excep that the termination－ology auggeated that the nvestigation was more sciedtific than in mos casea it really was．When the snimals came to be carefuily examined，M．de Blainville proposed for this deeper atudy the name falacozoology－i．e．，the atudy of the softer nimals－viz，Holluscs．this has been since abbrevisted into Malacology．As each of the terma Conchology and Malacology refers to only half the inquiry，we have avoided both and unless in excentional cases，described Mollusea and their ahells under the heading Zoology．

Forthwith a conclave of tho godhead ineets
II. Eccles. : For the two senses in which the term conclave is used, see 1.1, 2. Pope Nicolsus $11 .$. in the eleventh century, and Alexander III., in the twelfth, having limited the right of electing a pope to the college of cardinals, in 1288, on the death of Clement IV. the electors could not for nearly three years agree upon a successor; snd in 1271 the msgistrates, sctiog on the advice of St. Bonsventura, locked them ap till they could agree, which confinement made them do befors long. The success of the scheme led to its becoming a settled institution, snd it still continues. The appropriate piace for shutting continues. up the cardinal electora is a range of small cells in the Vatican, or some other pontifical palace, though a conclave msy be heid eisepalace, though a conclave msy be held eiseWhere; thus Pius VII. was elected at Venice.
to a single dish st dinner and the same st supper if they did not agree within three days, and to amall allowance of bread water, and wine, if the eighth day saw their deliberations still nnfinighed. Gregory XV. regulated the conclave by a bull iseued in
1621 , and Urban VI. by one sent forth in 1625 .
cơn-clä'-vist, s. [FT. conclaviste; Ital. \& Mod. Lat. conclavista.]

Eccles. : An ecclesiastic acting as secretary and servant to a cardinal, and shat op with him in the same building during the time that the conclave continues.
cơn-olım-äte, v.f. [Pref. con, and climate (q.v.).] To inure or accustom to e climate; to acclimatize.
cotn-clūde', " con-clud-en, v.t. \& i. [Let. concludo $=$ to shut up together : con $=$ cum $=$ with, together ; claudo $=$ to shat; Fr. conclure ; Ital. conchiudere; Sp. \& Port. coneluir.] A. Transitive:
L. Literally:

1. To shat up or in, to enclose.
"The rery peroou of Cbrist therefore, for over and the anlt-sama was only, tomehing bonily subatance,
concluded withio the grave ${ }^{-1}-H$ ooker: Ecelee Poity. hik. v. if 52
2. To end, to terminate, to fiolsh, to close.

## II. Figuratively:

1. To inciude, to comprehend, to embrace, "God hath concluded them all in unbellef. . . ."-
2. To determine, to arrange, to settle.

Rise. Is it concluded he shall be protector?

* 3. To oblige, to bind down.
"He uerer rofused to be concluded hy the authority
* 4. To hinder, to obstruct.
"This opee thlog which is befalle,

3. To gather as a consequence from reasoning; to infer, to come to a conclusion as to anything; to reckon.

*6. To refute, confute, or convince by argument.
" In. all thowe temptations Christ conoluded the ${ }^{*} 7$. To prove, to demonstrate. "Othinge, in the ende an it whal appeare, he concludeth

* 8. To decide, to consider as proved.
" But uo frall man, however grant or high.

* 9. To acknowledge as true or correct, to edmit.
"Reprove my allegstioo, if you rala; Shakesp.: 2 Henry VI., ili 1.

10. Law: To prevent from. (Wharton.)

* B. Reflexive: To preclude, to shut out.
C. Intransitive:

1. To finish, to make an end, to come to e conclusion.

- and so her doath concluden: $\begin{gathered}\text { Shekesp.: I Herry } \\ \text { V }\end{gathered}$

2. To leave off speaking or writing.

- To conclude: in short, in flae; to he brief. Shakeap.": And, to conch Adoure, they aro lyiog kumvos."-

3. To deterinine, to come to a decision, to make up one's mind.
"I will conclude to hate her,

* 4. To come to a decision or determiation to arrange, to decide, to agree.
conctude and be agreed."
Shakespo : Rich. II., L 1.
If Sometimes followed by the prep. on.

5. To collect by reasoning, to gather, to infer. the world wind omichole I I had a grollty con-
solence." - Arbuthnot: Hitary of John Bull.
*6. To form an opinion or decision (with of
r upon). or upon).
"Ctersury conctude upon Lother's instability. . . ."-
IT For the differance between to conclude and to close, see Close ; for that hetween to conclude upon snd to decide, see Decide.
ótn-clû'-děd, pa. par. or a. [Conclude.]
 [Lat. concluders, pr, par. of concludo.] A logical deduction, consequence, or inference; a conclusion. (Hale.)

* aōn-alá'-dent, a. [Lat. concludens.] Involving or containing a logical deduction, conse quence, or inferance; conclasive. (Bacon.)
- cōn-clû'-dẽr, s. [Eag. conclud(e); *r.] One who concludes, infera, or determines.
cón-olá'-dǐng, pr. par., a., \&s. [Conczene.] A. As pr. par.: ln senses correaponding to
those of the verb. those of the verb.
B. As adjectits:

1. Closing, ending, final.
2. Conclnaive.

Weil tell when 'tis enough,
Or 1 It wanta the ilco ooncl
Or if it wanth the ulce ooncluding bout."
C. As substantivs:

1. The sct of findshing, ending, or bringing to s close.
2. The act of arranging, determining on, or agreeing.
*3. An inference, deduction, or consoquence.
conclnding line, s. A small line leading through the centre of the stepe of a rope or Jacoh's ladder. (Weale.)

* cön-alî́'-dǐng-1y, adv. [Eng. concluding; -ly.] Conclusively; beyond doubt or controveraion. (Digby.)
- cốn-clû'-sǐ-ble, a. [Lat. conclusus, ya. par. of concludo $=$ to conclude.] Admitting of proof; determinable; capable of being inferred or demoostrated.
"'Tiu a certainly conclusible from God's prescleace,
cön-clû'-gion, * con-clu-ci-oun, * con-clu-si-aun, * con-cla-sy-on, s. [Fr. con clusion; ktal. conclusione; Sp. conclusion, from Lat. conclusio, from conclusus, pa par. of concludo.] [Conclude.]
L. Ordinary Language:

4. The conscquence or result of reasoning, thought, or experiment.
"It the concturionf arrived at io the preceding ax,

5. A resolution, determination, or resolve.

* 6. A problem, a question.

To wolde his wittes plie
To oset kome ronclusion, which ohulde be confusion
Unto this knighti" Unto this $\&$ nightu

* 7. An experiment

That mother triles s mercliens conclution
Who having two sweet babes, whe deantl takes ane
Will siay the other, and be yurte to norie, $\begin{aligned} & \text { Shakesp.; Rape of Lucrece, } 1,160 \text {. }\end{aligned}$
IT To try conclusions: To make experiment or essay of snything.

To ory renclusions, is the basket creep.
And break your own neck down.
And break your owo neck down." ${ }^{\text {Shameenp. }}$ : Bamet, 11. 2

- 8. An sttempt, an object.
"Ylt schuld he fayle of his concturioun."
* 9. Silence, quiet, pesce.
" Your wiff Octavila, with her modest oyes
And still conclusion, thall acquire no homonr,
II. Technically:

1. Logic: The inferential proposition of a syllogism, as compared or contrasted with the premises; the consequence or inference.
duced, 'It wenllt be froud that every oponclusion in dom dwo other propositionat. Whately : Logic, hl. 1., \% 2 .
-If conclusion: Finally, in fioe.
2. Law:
(1) The end of a plesding, conveyanco (Wharton.)
(2) A binding act. (Wharton.)

- Crabb thus discriminates betweon conclu ston, inference, and deduction: "A conclusion is full and decisive ; an inference is partial and indecisive; a conclusion lesves the mind in no doubt or hesitation; it pute e etop to all farther [further] reasooing : inferences ere speeia conclusions from particular circumstances they serve as links in the chain of weasoning Conclustons are drawn from real facts; infer ences are drs wn from the appearadces of things; deductions odly from argumente or assertione. Conclusions are practical ; inferences ratiocinative; deductions are fibal. We concluds from a person's conduct or declarations what he intends to do or lesve undone: we infer from the appearance of the clonds, or the thickness of the atmosphere, that there will be a hesvy fall of rain or enow; we deduce from a combination of facts, inferences, and assertions thst a atory is fabricated." (Crabb:Eng. Synon.)
* otn-clû'-şion-al, a. [Eng. conclusion;-al.] Conciuding, flnsl.
" Such separations of initiatory dedlentions, an woll -Honchurfontil neparation
otn-clû'-sive, a. [Fr. conclustf; Ital. \& Sp . conclusivo, from Lat. conclusus, pa par. of concludo $=$ to conclude.]
L. Ord, Language :
* 1. Concluding, final, st the end, forming a conclusion.

2. Decisive, fiasl; determining or bringing to a close any question, srgument, or difference; not admitting of controveraion or dispute; unanswerable
"'. bas been clearly oxhbited to the conclusive dis cussion of the subject by Mr. Grote, in his History of creesc.:- Lowis cred.
IL. Logic: Following as a regular consequence.
"Those that aye not men of art not knowing the are made in right and conclusiev modee and higuree."Locka

- Conclusive evidence (Law): Evidence of which from its very nature the law admita of no controversy or contradiction.
Conclusive presumption: An inference or presumption which no proof, however strong, can be sdmitted to contradict or invalidate.
II Crabb thus discriminates between conclusive, decisive, and convincing: "It is necessary to be conclusive when wo deliberate, and decisive when we comonand. Wat is conchusive puts an end to all disenssion, and determines the judgment; what is decisive puta sn end to sil wavering, and determines the will. Negotistora have somstimes an interest in not speaking conclusively; commanders can never retain their suthority without speaking decisively: conclusive when compared to convineing is general ; the latter is particular; an argument is convincing, a chain of reasoning conclusive. There may be much thst is convincing, whers there is nothing conclusive: : proof may be convincing of a particular circumstance; bat conclusive evidence will bear apon the main question." (Crabb: Eng. Synon.)
TI For the difference betweed conclusive and final, sce Final.
oón-clû'-ăve-ly̆, adv. [Eng. conclusive; -ly.] In a conclnsive or decisive manner, decisively, unanswerably. (Burke.)

oơn-00r'dăt, * cơn-cor-dāte, s. [Fr. concordat; Low Lat. concordatum, from Lat. concordo $=$ to be of one mind.] [ConcordANCE.]

Eccelesiol. \& Ch. Hist. : A compact, a convention, or an agraement entered into between the Pope and a novereign prince or a government for regulating the affaira of the Church within the kingdom. A concordat between Pope Calixtua II. and the Emperor Henry V. of Germany was agreed upon in 1122, which terminated the fierce controveray about inveatitures, and still to a certain extent regulates the affairs of the Roman Catholic Church in Germany. In 1516 a concordat took place between Pope Leo X. and Francis l., King of France, by which the Chapters were daprived of the right which they had formerly enjoyed of electing the biahops of the geveral sees. After much delay and royal importunity the French Parllament reluctant registared thia aurrender of privilege on March 15, 1518. Onitting less interesting concordats, a celebrated one took place on July 15, 1801, bet ween Pope Piua VII., acting through Cardinal Consalvi, and Napoleon Bonaparte, then first consol. This engagement re-eatabliahed the Papal authority in France, but not within its former linita; for it placed the clergy, in temporal and even in some spiritual matters, under the jurisdiction of the civil power. Other concordats with the French government were on Jamuary 25, 1813, and Nov. 22, 1817. On August 18, 1835, a concordat concluded between Pope Pius 1X. and the Emperor Francis tween Pope Pius ix. and the emperor Franels the legal. power of the Papacy in that empire; but, exciting much dissatisfaction, it was virtually abolished in 1868. Thare have been concordats with varions other Roman Catholic governments.
"". A barren, amblguous. delusfed concordat had Seformation of the church in its head ormality for a bere, -Milman: Hiat Latin CAriatianky, bk. xiv.

* cơn-crĕm-ā'-tion, s. [Lat. conerematio: $c o n=c u m=$ with, together, and crematio $=$ a burning, from eremo $=$ to burn.] [Catmation.] The act of burning several things together or at the aame time. (Boiley.)
- oŏn'-crơ-mĕnt, s. [Lat. concrementum, from concresco $=$ to grow together : con $\Rightarrow c u m=$ with, together, and creseo= to grow.] A growing together; a mass formed by concretion; a collection.
"There ts the cohesion of the matter into a more loose cousistency. 11 ke ciay hnd thereby it is prepared
to the conerement of o pethile or fint -Hals: Oripin of Mankind.
* cŏn-crěs'-çẹnçe, s. [Lıat. concrescens, pr. par. of concresco.] The act of gathering or forming into a masa by the growing together or coalescing of separste parts.
"Seeing it is beither a substance perfect, nor inconcrescence, hath not been taught." $\rightarrow$ Raleigh : History of the World
* cŏn-crĕs'-çi-ble, a. [Fr, concresctble; Ital. concrescibite, from Lat. concresco.] Capable of gathering or forming into a mass by coalescence; capable of congealing.
"They formed a, i.; exed concrescible oll"-Four-
* oơn-crĕs'-çive, a. [Lat. concresc(o); Eng. mff. -ive.] Growing together, or gathering into a mass ; coalescing. (Ec. Rev.)
con'-orēte, v.i. \&t. [Lat. concretus, pa. par. of coneresen $=$ to grow together : con = together, and cresco $=$ to grow.]
A. Intransitive:

1. To grow together, to coaleace into one mass.
(1) Followed by with :
-The mineral... matter. thus concreting with the (2) Absolutely:
the salt concretsin regular figures. . ${ }^{m}$-Nowton. 2. To coagulate.
"The hiood. . . couid not be made to concrete, . . ."
2. Trans. : To form by coneretion ; to form by the union of previonaly aeparate particlea. That there are in our interiour world divers bodies
that ere concrete outo others 18 beyond nild dinpute:
we see it in the rueteors. "- Hate: Origin of Mankind.
odn'-orēte, a. \& s. $[\mathrm{Fr}$. concret (m.), conerette (f.) : Sp., Port., \& Ital. conereto, all from Lat. concretus.] [CONCRETE, v.]
A. As adjective:
I. Ord. Lang.: Grown together, formed by the union of many particles into one mass
"The frst concrete state. or consistent surface, of
the chaob, must we of the same
ggure as the last liquid
II. Technicall
3. Logic:
+(1) Of names: Standing for a thing-as John, gea, table-as distinguished from stonding for an attribute of a thing-as whiteness, old age. This is the sense in which the schoolmen used the logical tern concretus. (J. S. Mill: Logic, bk. i., ch. ii., \& 4.$)$
(2) Special, as opposed to general. John Stuart Mill considers that the practice of using the word concrete in this sense, and abstrset in the sense of resulting from ahstraction or generalization, has grown up in modern times, being either introduced by Locke or at least having gained currency from his example. Mr. Mill himself avoids it, and employs the word concrete in his Logic only in geuse 1 (q.v.). (J. S. Mill : Logic, bk. i., ch. ii., § 4.)
4. Arith., Math., da (Of numbers and quontities): Stated to be of certain persona of things as opposed to an sbstract number Thns in the expreasions, 6 quires of paper, or 1,000 aoldiers, 6 and 1,000 are concrete numbers, but 4, 2,27 , ars abstrsct
"Thas the Concrete process is special and the Ab-
atract is general. The charactor of the concrete is experimental, physical, pharactor of the concrete is exs purely logical, ratloual. The Concreta part of every mathematical question is necessarily fouuded on oonpart consiets of a series of logical deductions."-Mar.
5. The Physical Sciences (Of a Science) - H. 41 . ing as ita aukject of investigation the deacription and classification of particnlar objects as opposed to a acienco having for ita aims the investigation of lawa. Thns, zoology and geology are mainly concrete sciences ; pure mathematics is an abotract one.
6. (ram. (Of wonds): Referring to aome thing apecial, and hence resolvable into two words. This, to love is concrete; it can be resolved into (1) the state of being or existing, and (2) into the state of spreading that existence temporarily or permanently as the state of love. But the verb to be ia solely abstract
B. As substantive :
*1. Ord. Lang. : A mass formed hy the union of parts or particlea previously separated. [CONCRETION.]
7. Building: A composition used for the foundations of large buildinga, or for securing stability or freedom from damp. It is colnstability or freedom from damp. It is colnproportions, mixed up thoroughly with water.
cŏn'-crë-těd, pa. par. \& a. [CONCRETE, v.t.]
cơn'-crēte-ly̆, adv. [Eng. concrete; -7y.] In a concrete manner; the opposite of abstractly, or, as it was formerly called by some, abstractedly. (Cudworth.)
cŏn'crēte-nĕss, s. [Eng. concrete; -ness.]
8. Gen.: The quality of being concrete.
9. Spec.: Coagulation ; the condeasation of fiuids into a more or less solid mass.
cŏn-crēt'-ẽr, s. [Eng. concret(e); err.]
Sugor-boiling: An apparatus for concentrating ayrup, by allowing it to flow in a boiling condition over the aurface of a heated pan, and then aubjecting it to the heat of a copper cylinder revolving over a fire, and having an internal hotblast. The syrup in a concentrated condition is discharged at the lower end. (Knight.)
cŏn'-crē-tĭñg, pr. par. \& a. [Conchete, v.] cơn-créstion, s. [Fr. concrétion; Prov. concrecio; Ital. concrezione, from Lat. concretio $=$ a uniting, condensing, or congealing.] [Conchete.]
I. Ordinary Language :
10. The act of concreting or growing together.
"Bome plants, upon the top of the sea, are supposed to grow oi some concretion of siine from the water,
where the sea stirreti iittle."-Dacon: Nutural Hist.
11. The mass thus formed.
"Heat, in gezerai. doth not resolve and attecuate the fuices of o human body; for two srest hent will
produce concretions."-Arbuthnot: On Aliments.
II. Geol.: Either a mechanical aggregation or a chemical union of particles of calcareons or other inaterial producing spherical, oval, or less regularly formed halls in argillaceous or other strata. Such nodules have frequently a shell or other organism conatituting the nucleus around which the aggregation or union has taken place. [Concretionary derosits.]
$\dagger$ cŏn-crē'-tion-al, a. [Eng. ennoretion:-al.] Pertaining to concretions, containing concretions, concretionary. (Bronde.)
cơn-crè-tion-ar-y̆, o. [Fr. concrétionnaire.] Characterised by, or containing, concretions. Annogs the nost rewarkabie examples of concre
tionarg Etructure..."-Lyell: Manual of Geol., en. iv concretionary deposits.
Geol.: Strata are not arranged primarily by their mechanical structure, but by the suc cession of life which they contain. No epoch, great or small, is therefore called thst of concretionary deposits, hut these exist more or less, here and there, in all parts of the systenn. The more notable concretions are those deacribed by Prof. Sedgwick as existing in the magnesian limestone of the north of England, which in aome places is so studded with them
that it looks like a great pile of cannon balls fitted for ordnance of different calibres. with which are commingled amaller ahot, some no larger than a pea. (Lyell, ecc.)

* cơn-crē'-tive, a. [Eng, concret(e) ; -ive.] Prodncing or tending to produce concretiona. "When wood aud other bodien petrify, we do not
acribe their induration to coid, but unto zailnous spirit, or concretive fuicen "-Brovens: Vulgar Exroura
*cǒn-crē'-tive-1̆y, adv. [Eng. concretive; -ly.]
* 1. Concretely, as oppoaed to abatractly.
take awny the gult as concretinely redornaing to the
 Rochesteris Let.

2. In a concretive manner; so as to form concretions.

* cơn-crè'-türe, s. [Eng. concret(e); -ure.] A concretion. (Johnson.)
* cơn-crew (ew as $\hat{u}$ ), v.i. [Pref. con, and crew (q.v.).] To grow or gather together ; to unite.
"And his fisire lockss, that wout with ointrinent sweet He let to grow and griosly to concreven on dew,次
* cón-crim-in-a'-tion, s. [Lat. concriminatio: con $=c u m=$ with, together ; crimina tio = a charging, accusing.] [CRimination.] A joint accuaation. (Maunder.)
* obn-cu'-bin-a-qyy, s. [Eng. concubin(s); -acy.] The same ae Concubinade (q.v.).
cón-cū'-bin-age, s. [Fr., from Lat. concu. binatus.] [Concubine.]

1. Ord. Lang. : The act or stete of living with one of the opposite aex without being legally married.
2. Law et Hisc.: Concubinage was tolersted among the patriarchs (Gen. xxv. 6) and by the Mosaic law (Exod. xxi. 9-12, Deut. xx. 14), and was largely practised by Solonion ( 1 Kings xi. 3). It was tolerated also among most if not all other Oriental nationa, as well as among the Greeka and the Romans to the time of Constantine. The last-named emperor, justly helieving that Christianityallowed only inarriage and not concuhinage (Mark only marriage and not concuhinage (Mark
xix. 4,$5 ; 1$ Cor. vii. 1;1 Tim. iii. 2), rendered xix. 4,5; 1 Cor. vii. $1 ; 1$ Tim. iii. 2), rendered
the practice illegal. The clergy of the 3rd, the proctice illegal. The clergy of the 3rd, 10th, 11 th, and other centuriea were charged
with what is often called concubinage, hut in many cases the relationa bctween celibate clergy and monks on the one haod and women living in their houses wers not what fa generally understood by concubinage. The law of England aanctions only proper marriage: it gives no countenance to concubinage. But on the Continent, morganatic or left-handed marriages sometimes contracted by royal personages are essentially the same as the concubinage of the old Romans. [Morganatic.]
cồn-cū'-bĭn-al, a. [Lat. concubinalis.] Pertaining to or of the nature of coacubinage.
*Oồn-cū-binn-är'-1-ąn, a, \& s. (Eng. concubinary; -an.]
A. As adj. : Pertaining to or living in concubinage.
the married and concubinarian, ns well ssooser
"-Milman: Hist. Latin Chritionity, bk. xiv., B. As subst. : One who practiaes concubinB.

* oồn-cū'-bín-a-ry̆, a. \& s. [Ttal. concubinario $=$ one living in concubinage.]
A. As adjective:

1. Pertaining or relating to concubinage.
2. Living in concubinage
"The said John, which in the oren councelle bad grievoussy condemued all the concub brary priests,
was takeni himselfe in the same crime - Bistop fall: whs taken himseife in the same cri
Honom of marricd Clergy, iiii 15 .
B. As subst. : One living in concubinage.
cón-cū'-binn-ate, s. [Lat. concubinatus; Ital. concubinato.] The condition or position of a concubine; concubinage
"Holy marringe in all men is preferred before un$\stackrel{\text { cleau concubin }}{\text { Popery, }}$ ili. $\S 3$.
cớn'-cụ-bīne, * cơn'-cụ-by̆n, s. [Fir. concubine; Lat. concubinus (111.), concuhine (f.) from concubo $=$ to lie togetleer $:$ con $=c u m=$ with, together, and cubo = to lie.]

* 1. Originally of the common gender, being applied to a person of either sex living in concubinage.
fäte, 保, färe, ạmidst, whãt, fâll, father; wē, wĕt, hëre, camel, bẽr, thêre; pine, pĭt, sire, sïr, marîne; gö, pơt,

whty of being brought tuto maller bulk, bat Fith a proportionais tncrease of gravity; conmolidation.

2. Fig. : The condenaing of largarge, conciseness, brevity.
"He [Goldarnth] was agreat and parhaps an uncqualled mnoter of
II. Chem. \& Physics: The reduction of anything to another and denser form; as of a rapour or gas to a liquid, or a liquid to a solid.
IT (1) Condensation of gaves or vapours:
Chem. \& Physics: The passage of gases or vapours from the aeriform to the liquid state. It is कometimes called also the liquefsetion of vapoura. It may be due to one of three causee : cooling, compression, or chemical affinity. Before the firat or eecond of these canses can operata, the vapour must be saturated. Various calto also condense vapours by means of chemieal sffinity. When vepours are condensed their litent heat becomes free (Ganot.)
(2) Condensation of liquids :

Chem. \& Physics: The reduction of a liquid to smaller bulk, with a proportionate increase in the spacific gravity.
SWr'dunn-sa-tive, a. [Fr. condensatff (m.), condensative (P.); Sp. \& Port. condensativo.] Heving the property of condensing.
©סn-iĕnse', v.t. \& i. [Fr. oondenser; Ap. \& Port. condensar; Ital condensart, from Lat. condenso $=$ to make denee ; condensus $=$ very close together : con=fully, and densus = thick, dense.]

## A. Transitive:

I. Ordinary Language:

1. Lit. (of material things): To render more dense by any process which brings the parta or particles more closely together.
$\begin{aligned} & \text { For them the rocks dizend ved into in food, } \\ & \text { The dewn condented into vurgolio food }{ }^{\text {an }}\end{aligned}$
Cosper: : Expostulation
2. Fig. (of things not material): To rsnde denser, more compact or eolid, to concentrate.

Condence their powere, Arecks thalr onset dare,
condence their powers, and nilt the coming war.
II. Chem \& Physics: To reduce into another and deneer form, as to reduce a gas into a liquid or a liquid into a eulid. [Condenas mon.]
B. Intrans. : To become more dense, thicker, or more compact, as to pase from a gseeous into liquid or from a hiquid into a more or lese colld etate.
"All vapours, when they begin to condenis and
con-dĕnse', a. [Ital. condenso, from Lat. condensus = very deose.] Coodensed, very dense or simply dense, highty compact or simply compact.
"They might be separated
without ousociating 6 into the hage
©On-dënsed', pan par. \& a. [Condense, v.]
condenged beer, s. Beer reduced in bulk by condensation. A patent for doing so was taked out in 1875 by P. E. Lockwood. (Haydn.)
condensed mille, s. Milk reduced grestly in bulk and rendered proportionately denser. M. Gail Borden, residing in the Ficinity of New York, in 1849 lavented 8 process for the condensation of milk, which sinee 1886 has been carried out extensively in Britain.

## condensed wave, s.

Acoustics: A very limited length withia a tube in which slong the air is condeneed by a piston moving a short diatance from its place withio the tube. (Ganot.)
condensed wort, $s$. Wort greatly rcduced in lulk and proportionately locreaeed in specifio gravity.
1 oón-dĕn'-sĕdi-n̆̈ss, s. [Eng. condensed; ness.] The quality of belog compressed or condensed ( tit . \& fg.).
"This concersedrose, thin intensity in Cordelia's comporanent and niterance is equally displayed in Wht sho says of at gentle and tender kind."Coneden
Clarke: Shakesp. Charncters, p 173 .
ctr-iěn'-ã̃r, \& [Eng. condeno(e); -er.] I. Ord, Lang.: One who or that which condenees.

## II. Tochnically:

1. Steam-engine: An apparatus for reducing to a liquid form the ateam in front of the platon, so as to ohtaln a partial vacuum at that point, and thus utilize the natural pressure of the atmosphere. Watt invented the injection condenser and the separate condenser. The surface condenser has a seriee of flat chambers or tubee, ususlyy the latter, In which the stesm ie cooled by s body of water enrrounding the tubes. Ditalled water for ahlpa' nee is obtained by the condensetion of steam in a ourface condenser. (Knight.)
2. Distilling: The still-condenser le an epparatus generally made of the worm-tub form; the coil containing the alcoholic vapour traveraing s tub which receives a coaetant accession of cold whter, condensing the vapour in the coll. The liquid escapes at a cock below. (Knight.)
3. Metai.: An epartment In which metallic or deleterious gaseous fumes are condensed to prevent their escape into, and contamination of, the atmosphere. The device consista of a prolonged duct for the fumes, with showers of weter to condense the arsenical, eulphurous, and other fugitive volatile mettera. It elso eerves an economical purpose in saving fugitive fumes of lead, zinc, mercury, eulphur, entimony, de. (Knight.)
4. Gas-making: An mppratus in which the crude gas from the retort is cooled, and the ammoniacal liquor sad tar extracted from it. (Knight.)
5. Sugar manufacturs: The Degrand (De rosne) condenser consists of a vertical series of convoluted ateam-pipes, over which tricklee the sugar-cane juice from the defecator (Knight.)
6. Wooi manufacture: A device for compscting the nerrow elivers from a carding-machine soas to bring them into the condition of slubs. (Knight.)
7. Dentistry: A tool for packing foil for plugging teeth. (Knight.)
8. Pneumat.: An air-pnmp for fllling a the etmospheric. (Knight.)
9. Optics: A lene to gather and concentrate the rays collected by the mirror and direct them upon the object. (Knight.)
"It now the locus be caretully adjunted and the achromatic condenser be elluloyed tor the purpose oi defintug the outine with the nimoet precision $\ddot{\text { Tod }}$. 10. Electricity:
(1) Au instrument for concentrating electriefty by the effect of iodnction. It usually consists of a confolded aheet of tin-foil, whose layers are separated by a thin eheet having a non-cenducting ourface.
(2) With induction apparatus, a device for absorption or suppression of tbe extra current, indueed by the rapld breake in the meio current.
(3) An instrument in which en elsctric apark passes between the poles in a closed glass eylinder, so as to be employed in hurming metals in an stmosphere of any given tennity or spsciffe chemical character, to obtain the apectra of metals or gases free from accidental charscteristics of the genersl atmoephere for the tims being. (Knight.)
cón-dĕn'-sǐigg, pr. par., a., \& a. [Condense, $v .1$
A. \& B. As pr. par. A particip. adj. : (In sensee corresponding to those of the verb).
coalesced to particles sufficientily liarye to reftect yet coalesced to particles sufficicutily larye to refteet sell

C. As subst.: The act of rendering more dense ; the state of being rendercd more dense.
the cold approacheth, and by condensing, drives the vapours into clouds of drop

## condensing force, s .

Elect. : The relation in frictional electricity between the whole eharge which the coliect iog plate can take while under the influenes of the eecond plata to that which it would take if alone ; the relation of the total qusntity of electricity on the collecting plate to that which remaine free. (Ganot.)
condensing piate, a
Elect.: One of two plates used for exparimenting on frictlonal electricity, the othor being called the collecting plata. (Ganot: Physics, transl. by Athinson, 8609 .)
condensing pump, a. An epparatue for compressing air or eny other gas. It consicta easentially of a piaton moving in a cylioder or receiver, with a valve on lita upper side, opening or closing as the pieton ascende or descends. It is used chicfly for charging liquids with gasee. (Ganot.)
oondensing syringe, a A ayringe Whoeo valves are so arranged ss to take air above and condense it below the piston, eo as to condense air into any chamber (Knight.)

* cobn-iěn'-sil-tyy, s. [Eng. condense, a.: 1 connective; and euff. -ty.]
I. Lit.: The state of being condensed; deusity.

*10. A writing coatoining the articles a terms of an agreenset ; s compact, a bond.

Exprese"d in thech sam or ardition...n ane are
II. Technically:

1. Law:
(1) A restrsint annexed to anything, by conforming to which one will gain advantage, and by departing from which he will suffer loss.
(2) Aaything contingent on occurrence which may or may not take place.
II Conditiona are of many kinds, as conditions precedent, subaequent, inherent, coilateral, \&c. For these see the special phrasee under III., and the words with which comdition is coupled.
2. Math.: [III., 3].
3. Vet. : [IIL., 4, 5].
III. In special phrases at compounds:
4. Condition in deed:

Law: A condition expreasly mentioned in that apecial one on performance of which the eatate can ba held, and oo breach of which the grantee can claim it back again.
2. Conditions of sale:

Law: Ths terms under which property is offered for saie; also the instrument contain. ing these terms.
3. Equation of conditions:

Math.: Certain equations in the integral calculus, $\frac{z}{5}=\frac{b}{2}$ useful in ascertaining whether a proposed fluxion will admit of finite intagration or a finita fluent. (Crabb.)
4. In condition:

Vet. : Io a good atate of heaith, strength, and training.
5. Out of condition:

Vet. : Not in a good atate of health, atrength, and training.

## condition powder, s.

lef. : A tonlc mixture admiaistered to horse ad cattle. Its actioo is chiefly as a stomachic.
T Crabb thus discriminstes between condition and station: "Condition has most relation to the circumstances, education, birth, and the like; station refers rather to the rank, occupation, or mode of life which one pursues. Riches suddenly acquired are cal culated to make a man forget his original condition, and to render him negligent of the duties of his station. The condition of men in reality is often ao different from what it appesra, that it is extremely difficult to form an estimate of what they are, or what they have been. It is the folly of the present day, that every man is unwilling to keep the station which has been assigned to him by Pration which has been assigned to him by Providence: the rage for equality destroys
every just distinction la eociety; the low every just distinction la oociety; the low
aspire to be, in appearance, at least, equal aspire to be, in appearance, at least, equa
with their auperiors; and those in elevated with their auperiors; and those in elevaled
stations do not heaitate to put thernaelves on a level with their inferiors." (Crabb: Eng Synon.)

1. To forgive, to pardon.
-It the uubrerous casere where a fow appoass an :

2. Used loosely in tha sense of atone or compensate for.
"There wan n cartsin vague earneatnese of belief and sonetumes focular iovks of his father." $\sim$ Black Madcap Viotet, ch. $x \times x i 11$.
II. Law: To forgive or overlook a breach of marital duty.
$\dagger$ B. Intrans. : To atone or compensate for.
corn'-dor, s. [Sp., \&c., condor, from lncr (Peruvian Isdian) cuntur $=$ the bird delined velow.]
Ornith.: A magnificent vulture, Sarco ramphus or Sarcorhamphus gryphus, whicl floats with ontstretched and motionlea wings in airy circles on the higher parts o the Andes, reaching at times the tremen dous elevation of $21,000 \mathrm{ft}$. above the sea level. The older travellers, as was their wont. exaggersted its size, strength, and feroeity, and it figured as the Western coun terpart of the mythical roc deseribed by the Arabs, and by some credited with the ability "to trusse an elephant." Humboldt and Bonpland dissipated these illusions. The former great naturalist met with none the expansion of whose wings exceeded 9 ft . Some of 11 ft . have been said to be met with and one of 14 ft . Humbolilt found that a nale condor, the expanse of whose wings was ft , measured 3 ft . 3 in . from the tip of the bill to the extremity of the tail. The male condor has a comb on its head. Both sexas have a ruff ronud their necks. Their hodies are usually deep, black, with a tinge of grey the wing eoverts in tine males are white, at leas at the tips; the legs are bluish grey. Straz de to agy, children are reputed to be in no danger from it, though two condors will attack the vicuña, the heifer, and even the puma. The species is found in most parta of the Andea, especially in Peru and Chili. There is one in the Zoological Gardens in Regent's l'arh-s sorry bird compared with the mythic condor of pre-scientific timea.
cơn-dơt-tǐ- $\hat{e}^{\prime}-\mathbf{r e ̆}$ ( $\mathbf{p l}$, cŏn-dŏt-tǐ- $\hat{e}^{\prime}-\mathbf{r i n}$ ), s. [ltal. = a captaio, a carrier, a mercenary lesder, frou condotta $=$ conduet, command, prudence wisdom, earriage. Cognate with the Lat. and Enig. word conductor.]

Hist, ece. : A soldier of fortune, a military leader, who sold his own sword and those of lits followers to the lighest bldder, regardless of the justice of the cause for which he and they fonght.
II It was in Italy that the practice began of enploying condottieri. In 1225 Genoa engaged 200 of them, led by the Duke of Savoy; and in 1282 Florence hired 500 French, and other statea followed the exampla. The practice received a great hapulse about the
boll, boy; pout, jowl; cat, cell, chorus, ghin, benọ ; go, gem; thin, this: sin, as; expect, Xenophon, exist. ph $=\boldsymbol{f}$.

beginning of the fonrteenth century, when the petty Itatian princes and republics began to commute the military services which their subjects had hitherto rendered for money. for both a military vold was thus created and means wers obtained to fill it by engaging condottieri. In 1342 the cities formed a leagne to suppress them. But there was occupation for them outside Italy. Large bodies of them took part in the war between Edward JII, of England and France, and when the peace of Brotigny, io 1360 , terminated their oceupation, they fonght and plundered on their own account, becoming a terrible acourge to account, becoming a terrible acenrge to France. They were called free companies, or simply companies or free lances, and numi-
bered ahout 40,000 fightug mea, all heavily bered ahout 40,000 fighting mea, aul heavily
armod cavalry. Finally they were transferred armed cavalry. Finally they were transferred to Castile, on their way levying a contribution on the Pope at Avignon. They were an Insatiahly rapacious race, and so faithless that they were feared by friends as well as foes. They had no scruple about any amount of cruelty, but finding ultimately that it was more advantageous to ayold alaying their focs and simply to capture them unhurt with the view of demanding a heavy ransnm, they aimed at making their battles bloodless. Sir John Hawkwood, an Englishman buried at Florence in 1393 with great honour by tho eitizens, is held to have been one of the last condottieri properly an called.
cơn'-drồd-ìte, s. [Chondromite.]
cotn-dūçe; v.i. \& t. [Lat. conduco = to lead together: $\operatorname{con}=\mathrm{cum}=$ with ; $d u c o=$ to lesd ; Sp. conducir ; Fr. conduire:' Port. conduzir ital. conducere, condurre.]
A. Intransitive:

1. To contribute to or promote a resuit; to further, to tend to; to advance or promote (followed by to, unto, or toucerd).
-He whs sensible how mocb snch an nion wout condure to the happiness of both
*2. To lead, to guide.

A. As pa.par.: In eenses correspondiug to ore of the vert.
B. As adj. : Hired.
C. As substantive :

1. One who is hired, a workman.
2. A chaplain, a hired priest. The term ls still applied at Eton to the chaplains whe conduct Divine service.
cön-dŭot', v.t. \& i. [Conduct, s.]

## A. Transitive:

1. Literally:
(1) To lead, guide, direct, or accompany on the way.
"And Jadah caroe to Gulgal. to go to meet the kink.
to conduct the kiog over Jordin."-2 Sam. xix.
(2) To usher in, to lead or briag to one's presence with cereraony.
" Pray recelve them nobly, and comance them:

- (3) To lead, direct, or head, as an army.
"Curten himeelf conductod the third and armallest
division."-Robertson: History of America.

2. Fig. : To manage, to direct, to control, to regulate.
"Having oxplained tho gaveral achowo axd forma-
tiou of the argunemt it uny bo permitted to muhtola

Paidy: Hara Pawima, ch. I.
3. Musio: To lead, to direct $t_{1}$ as a choir or orchestra.
4. Physics: To carry, to convey, as heat, \&c.
B. Reflexive: To carry oneself, to behave, to act.

## C. Intransitive :

1. Phys. : To act as a conductor of heat, \&ce. "Carbon, in geueral, eonducats better or warse ac. Cordiug to the manner in which it has been yrepared tramesiation.
2. Music: To act as conductor of a choir or orchestra in the performance of a musical composition.
"We neel rot stay to applated the orchestra for excellent Work, Mr. Williag lor judicious une of the a nudel of cienruess, frmuess, and tact.- Datily Tele
3. Fig.: Ta behave, to conduet ons's self, to act. (American.) (Webster.)
T Crabl thus discriminatee between to conduct, to guide, and to lead: "The first two of these terms convey, according to their rea inport, an idea of superior intelligence, which is not inplied by the latter: on the other liand, this includes an idea of credit and ascendency altogether unknown to the others. We conduct or guide those who do not know the road; we lead those who either camnot or will not go slone. In the literal sense it is the head that conducts, the eye that guides. and the hand that leads. One conducts a law: suit; one guides a traveller; one leads an infant. In the figurative gense the understanding conducts; rule guides; the will or influence leads. Intelligence ought to conduct us in business; politeness onght to guide our beha viour in comprany; taste may lead us in the choice of pleasures. We are conducted in a choine of pleasures. We are course, that we may do what is a celtain course, that we may do what is
proper to be done; we are guided in a certain proper to be done; we are guided in a certain
route, that wa may not go astray ; we ars route, that wa may not go astray; we are
led into society from a sociable temper. A general conducts an army according to his knowledge and expericnce; he is himself guiled in what he does by fixed rules; ha leads his arnyy into the field of battle ly' the word of command. The pilot conducts the vessel; the steersman guides it : the coachmsn guides his horses on the road: he leads them into the staile." (Crabb: Eug. Synon.)
He thus discriminates between to conduct, to manage, and to direct " Conducting requires most wishom and knowledge ; managing most action; direction most anthority. A lawyer conducts the cause entrusted to bin ; a steward manages the mercantile concerna for his em-

ployer ; a superiotendent directs tha movemeuts of all the subordinate agents. Conducting is slwsys applied to atfaire of the firat importance; manayement is a term of faniliar pose to characterize familiar employment; direction makes up in authority what it wants In lmportance ; it falls unt litite short of the In importance; it falls unt hithe short of the wlans; a manager acts or executes ; a director plans; a manager acts or executes,
commands." (Crabb: Eng. Synon.)

cton-dŭc'-teđd, pa. par. or a. [ConDuct, v.]
A. As pa. par. : In aenees correspondiog to those of the verb.

*3. A gudde, director, or manager.
"Nono will deny him to have been the ehlot oomII. Technically:

1. Railway and coach trafte: The official who bas charge of an omnibus, street-car, or rallrosd train, whether for passengers or freight.
I Io Englsod the official in charge of a railway passenger traio is known as a guard (q.v.). 2. Music:
(1) A director or leader of an orchestra or chorus. It is supposed that a leader or a fugleman was employed by the Assyrians, to reguisto the rlythm of the songs or dances; he was armed with two sticks, one of which he beat against the other, sud so marked the time or accent. (Stainer and Barrett.)
(2) The inventor or leader of a chime or change in bell-ringing. (Stainer and Barrett.)
*3. Surg. : (For definition see extrset).

- Conductor in surgery [is] an instrument the use of which is to direct the knile incertalin operations: Hfed. Dict

4. Heat: Aaything which is capsble of transmitting heat through its mass from particle to particle.
(1) Bad conductor: A body which transmits lieat slowly and inperfectly. A blanket is a bsd conductor of heat: used for a covering at uight it prevents the heat geacrated lyy the person sleeping from escajing into the externsl stmosphere ; employed to roll up ice it impedes the passage of the warmer extermsl air to the congealed body, and keeps the latter from soon melting. The resins, glass, wood, and especially liquids and gases are ocher bad conductors of heat.
(2) Good conductor: A body which readily transmits heat through it. The metals are high in this respect, the leading ones being high in this respect, the lesding ones being
arranged in the following order:-(a) (highest) arranged in the following order:-(a) (highest) matinum, $(b)$ silver,
zine, $(f)$ tin, $(g)$ lead.
5. Elect. : A body which acquires and propagates electricity over its whole surfacs when brought in contact with au electrifled looty. As in the case of heat, thare are good and bad conductors of electrieity. Metals are good conductors, and in the following order:(a) (higliest) silver, (b) copper, (c) gold, (d) aluminiun, ( $e$ ) sodium, $(f)$ zinc, $(g)$ cadmiun, (h) potassium, (i) platinum, ( $j$ ) iron, (k) tin,
( $l$ lead, ( $m$ ) German ailver, ( $n$ ) antimony, ( 0 mercury, ( $p$ ) bisumth. Llquids, on the eentrary, are bad conductors of electricity.
II Equivalent conductors of electricily: Conduotors which offer an equal reaistance to the passage of 8 n electric current, and which inight be aubstituted for each other in any
voltaic circuit withont altering lis intensity. Yoltaic
(Ganot.)
cotn-dŭc'-tõr-y. a. [Eng. conductor; y.] Hsving the power or quality of condacting; conductive.

## II．Technically ：

1．Geom．：A solid flgure described by the revolution of a right－nngled triangle about oue of the sides contaioing the right angle， which side remains fixed．If the fixed side
be equal to the other side containing the right angle，the cone to called a right－anglod cone if it be less than the other oide，on obtuse－
angied，and，if greater，an acute－angled cone． angled，and，if greater，en acute－angled cone． The axis of a cone is the fixed straight line
ebout which the triangle revelves．The base ebout which the triangle revolves．The base
of a cone la the circle described by that elde of a cone la the circle described by that elde containing the right angle which revolves． Similar cones are these which have their axes
snd the diametere of their bases proportion－ and the diametere of their hases proportion als．（Euclid．）
2．Optics：A pencll of raye of light emanst－ ing from a point and diverging as they pro－ ceed on their course．
3．Astron．：A conical－shaped shedow pro－ jected by a planet on the other side from
that on which it is llhuminated by the sun．
4．Geol．：A conleal mound or hill produced by the showering down around the oriflce of eruption of scorix，dust，and the various other materiala ejected．Many hundreds of such cones may be aeen in France in the ancient provinces of Auvergne，Velsy，and Viveraia， arrauged in chains of hills．Sonctimes ancl a cone becomes truncated by a portion of the volcane falling in during an eruption．Papan－ dayang，in Java，did 80 in 1772，snd a volenno in Alaska in 1786．（Lyell．）There are oum－ crous volcanic cones in America，sad it is claimed that some of the largeat volcanic mountains，such as Orizala，io Mexico，have been entirely built up by the deposition of material harled froou a steadily risiag crater．
5．Zoology：
（1）The Engliah name of any shell of the large tropical molluscous genus Conus（ $q . v$. ．） The name also of any animsl of that genus．
（2）Pl．（rones）：The English name of the Conidx，a family of Gasteropodous molluses．
6．Bot．：A kind of anthocarpous or collec－ tive fruit，called also strobilus，shaped some－ what like a mathematical cone，and consiat－ ing of an ament，the carpella of which are （scale－like）spread open，and bear naked seeds． Sometines these scales are thin with litile cobesion，but frequently they are woody and cohcre into e single tuberculated mass．A modification of it is the Galbelus，which is globular，and has the heads of the carpella much enlarged．The fruit of the Scotch Fir （Pinus sylvestris）is a genaine cone，wbilst the Juniper is a galbulus，with ficshy coherent carpelia．It used to be considered as a spike
in which the rachis and bracts have become partially lignifled，or in which the bracts are memhranons．Bul more receot investiga－ tions have shown that it ia not a collection of flowers，but an assemblage of seedr，fruit， or psendo－carp resulting from s single flower． The top furnishes an instance of a true stro－ bilus or cone with membraaeus bracts． （Alfred W．Bennett，F．L．S．，\＆c．）
＂The cones dependent， 10118 and amooth，growing 7．Gun－making：The vent－plug which is screwed into the barrel of a flre－arm．The outer end is the ripple for receiving the percussion－cap．（Kuight．）
TI Purple Cone：
Bot．：A plant，one of the Echinaces，order Compюsitæ．（American．）
cone－bit，s．A boring－bit of conical form． （Knight．）
cone－compasses，s．pl．A pair of com－ passes with a cone or builet on one leg，to set． in a hole；bullet－compasses．（Knight．）
cone－flower，s．A plant，genus Rud－ beckia，order Comprsitæ．
cone－gear，s．A mode of transmitting motion，consisting of two cones rolling together．（K＇uight．）

## cone－head，s．

Hortic．：The name given by gardeners to Strobilanthes，a genus of Acanthaceæ．
cone－in－cone，$a$ ．Resembling a series of hollow cones，each inserted in the one next exceeding it in size．This structure is orca． sionally found in coal，limestone，\＆c．，and is probably due to pressure acting on coucretions in coarse of formation．
cone－joint，s．A joint formed by it donble cone of iron inserted into the ende of the pipes to be joined，and tightened by screw－bolts．（Knight．）

## come－plate，

Mech．：A strong plate of cast iron tixed vertically to the bed of a lathe，with a conica hole in it，to form a support for the ead of shaft which it is required to bore．（Weale．）

## cone－pulley，$s$.

1．An arrangement for varying the speed of the bobbin in splaning－machines，giving them a gradusily decreasing velocity as the roving is wound thereen，so es to keep an equal strain on the roving．The lower palley is driveu on the roving．The lower pulley is driveu motion to the other by a band which is slipped motion to the other by a band which is slipped
towards the larger end of the upper roller as towards the larger end of the upper
the roving gradually fills the bobbin．
2．Mach．A pulley with seversl faces of varying dismeter，so as to obtsin varying speeds of the mandrel；a epeed－pulley．
（Knight．）
cone－shaped，a．Shaped like a cone； conical．
oone－shell，s．The Engllsh name of Conus，the typical genus of the molluscous family Conidæ（q．v．）．
cone－valve，s．A hollow valve having a conical，perforsted face，throngh which water is discharged when the valve rises，withont hopinging directly upon the valve－face or seat．（Knight．）
Cone－vise coupling：A mode of connecting the eads of ahaftiog，consisting of sn outer sleeve and two inner sleeves．（Knight．）
cone－wheel，s．A wheel with several applications：（1）Two frusiuns are in apposi－ tion，one having teeth on its face and the other a spirally arranged rew of studs．The toothed wheel sit its small end acts upon studs on the larger portion of the opposits wheel sud conversely．The effect is to confer a regular variability of rotstion to the stud－ Wheel from a regular rotation of the driving frustuo．（2）The frustum，being driven by the motor，communicates molion to the wheel above it．This is not intermittent or variable， but is adjustable．The nearer the upper wheel is to the base of the cone，the faster will it rotate，sad conversely．（Knighi．）
cōn－ĕn＇－chy̆－ma，s．［Gr．кผ́vos（kōnos）＝a cone，and $\bar{\epsilon} \gamma \chi u \mu a($ engchuma $)=3 n$ infusion．）
Bot．：The tissne，nade up of conical cells， in the hairs of aome plants．
conepate，conepati，s［Mexican．］The name given in Mexico to the Skunk（Afephitis Americana），an animal of the Mustelide or Weasel family．
cot－něs＇－sī，s．\＆a．［Etym．doubtful．］The name given in Great Britain，but not by the natives of India，to the bark described below．
conessi bark，s．A kind of bark ob－ tained from an Indian plant，Wrightia anti－ dysenterica，of the order Apocynaceæ．It is a valnable astringent and febrifuge．In Mala－ bar it is called Palapatta．（Lindley．）
＊coneveth，$s$ ．［Conveth．］
cō＇－něy，cō＇－ny̆，s．［Conv．］
coney－fish，s．［Conv－Fish．］

+ cŏn＇－fäb，s．［A contraction of confabulation （I．．v．）．］Familiar talk or conversation ；chat， gossip）．
＂He made ne follow him lato the lihrary that we might continue our confab without interruption．＂－
Mad．$D$ Arbiay：Diary， 1 ifg．

II. Hist.: Pertalning to the Confederate States or their cause.
IT Confederate States of North America:
Hist. : The nsins assumed by the Sonthenn or Slave-holding States which in 1860 and 1861 seceded from the United States of America maintaining their separstion by war, and supporting for a time with grest heroism, but uot with ultimate guccess, their attemptat separation. From the first slavery had foorished in the Southern States of the Union, while, speaking broadly, the North had been fres from the transcendeat avil, and year by year contaised an increasiog nuinber of abolitiontats, eager for its extinction everywhere. Up till 1860 the South had votiog power sufficient to elect men of democratic or Southern views to the United Statea Preaideotial chsir, hut in November, 1860 , a nominee of the "republican" North, Abrsham Lincoln, was legally can North, Abrsham Lincoln, was legally elected chief ruler. The South fesred that he
would use his influenes agalnst the "domestic would use his influence against the "domestic
institution" which it cherished, and rejected all his protestations that he would strictly conform to ths law. On the 20th December Sonth Carolioa led the wsy in secession, followed by Alabama, Florids, Missiasippi, Georgia, Louisiana, Texas, part of Virginia, Arksusas, Tennessee, snd North Carolins. Thess took the nsme of the Confederste States of North America, whilst their opponenta called themselvea Federals. The secessionists on February 9tb, 1861, elected Jefferson Dsvis their President, the rest tacitly scqniesciag in the decision. On April 13th Fort Sumter, near Charleston, was taken by this South near Charleston, was taken by tha South Carolinisns, and a challenge thus thrown down menced a sanguinary wsr. On the 21st July the first great battle, that of Bull Ruo, took plsce. After the surrender of General Lec to Genersl Grant, on April 9th, 1865, the Confederste cause became hopeless, and pesce was soon afterwards restored. The wsr has resulted in the abolition of slavery throughout tha United States.

## B. As substantive:

1. Gen.: One joined or associated with another for mutual aid and aupport io any enterprise ; sn ally, an associate.
(1) In a good or at least doubtful sense:
"For this canse ali tha confoderates beynge assemWere outhe Latedemonyans for thys matter they the pace abould be concladed." Nicoll: Thucydides, fol. 133.
(2) In a bad sense: An accomplice.

MaCuilay : Hondt. Eng., eh. $\mathbf{x x i}$. 2. Spec. (pl.): The nembers of those states of the American Union which sulpurted slavery.
If Crabb thns discriminates between confederate and accomplice: "Both these telms imply a partner in some proceeding, hut they difter as to the nature of the proceeding: in the former case it may be lawful or unlawful in the latter unlawful oniy. In this latter senge $\mathbf{s}$ confederate is a partner in a plot or secret association ; an accomplice is a partuer in some active violation of the laws. Gilly Fawkes retained his resolution, till the Isst extremity, not to reveal the names of his contfederates: it is the common refuge of all rol bers and desperate charmcters to betray their accomplices in oriter to sereen themselves from punishment." (Crabb: Eing. Synon.)

## A. Transitive:

- 1. To bring together for the purposes of comparison; to discuss, to compare, to ex-
smine.

2. To apply, to turn, to dirent.

3. To bestow, to grant as a permanent gift or possession.
"Thoo conferrest bhe benefte, and be rocelveen them
."-Arouthnot; Bistory of John Bull
(a) Followed by on or upon before the recipient.
" heent to the limbs, and quiet I confer Waller.
On troubled minds."

* (b) Sometimes followed by $t o$
"Everything seenis to have rome benefcial tea-

* (c) With two objects.

## These Trojans their "Wue fate and death."

* 4. To contribute, to help, to conduce, to tend.
"The clononesse and corapuctness ot the parts resting together, doth much conver to the streagth of the
unlon "- Glenville.
B. Intransitive :

1. To mect together for the purpose of comparing thonglits, ideas, or plans; to discuss, to converse, to consuit, to compare views. (Followed by with before the person consulted, and of before the matter considered.)

2. To contribnte, to help, to conduce.
fi Crabb thus discriminates between to confer and to bestow: "Conferring is an act of anthority; bestowing that of charity or generosity. Princes and men in power confer; people in a private station bestow. Honoura, diguities, privileges, and rank, are the things conferred; favours, kindnesses, and pecuniary relief, are the things bestowed. Merit, favour, interest, caprice, or intrigue, gives rise to conferring; necessity, solicitation, and private affection, lead to bestowing. England affords more than one ingtance in which the highest honoura of the etate have been conferred on peraons of distinguished ioerit, thongh not of elevated lirth : it is the characterietic of Christianity, that it inspires ita followera with a desire of bestowing their goods on the poor and necessitons. It is not easy to confer a favour on the unthankful: the value of a kindness is greatly enhanced by the manner in which it is bestowed." (Crabb: Eng. Synon.)
i cŏn-rẽr-ēe', s. [Eng. conjer; -ee.]
3. One with whom a person confera, discusses, or consulta.
4. [Confleriee.]

"Readiag maketh a foll dan : conference o ready

* 4. Aualogy or agreement.
uJohu Knor does not meit the held ot my partickle of the ncriptures alledzed be vare betuly the phrise Crasragusil \& J. K tox, F. 18, en 19, b.

5. A meeting or gathering for the purpose of conferring or comparing views and ideas ; or for the settlement and adjustment of differences.
1I. Technically:
6. Diplomacy: A mecting of the representatives of different powers for the purpose of sdjusting differences. For detaiis see example.

##  

2. Parliamentary usage: A meeting of two branches of a legielature, by their committees to consider and adjust differencee respecting blles, \&c. (Wedster.). If a bill io in dispute between the two Houses of the American Congress, the House wbich at the moment is in possession of the blll aska for tbe confereace. The other House then fixem the time and place. If a "simple conference "fail to adjust matters, a " free confereace" follows, and it is cuatomary to ask for one if two of the ordinary cuatomary to ask for one if two of the ordinary
kind bave failed. Afterwards all, till the difficulty te removed, Afterwards a
3. Law: A meeting between a barrister or other advoeste and a solicitor to conault alrout the case of the client for whom they are acting.

## 4. Ecclesiology :

(1) A meeting of the ministers of any Chinreh for the coneideration end regulation of church matters.
${ }^{\text {"Soou atter his return from America, he hed come }}$

(a) Gen. : In the foregoling sense.
(b) Spec.: An annual gathering of the ministers, now with a certain nuniber of lay representatives of the several Wesleyan Mothodist congregatione, to deliberata npon the affairs of the religions denomination to which they belong. [Methodigk.]
(2) A meeting not held at etated intervels, but arranged to adjust oome differenca which may exist between Churches or sections of Churches.
II Many conferences heve taken place abroad between Churches or parties in Churches. Thus there wers conferences between Lutherans and Roman Catholics at Ratisbon in A.D. 1601 ; one in 1685 between John Clande, of the French Reformed Church, and Jamea Bénigne Bosavet, \& Roman Catholic ; and Benigne Bosauet, e Roman Cathollc ; and
one at Thorn in 1645 , with the view of reone at Thorn in 1645, with the view of re-
conciling the Lntherans end the Reformed conciling the Lntherans and the Reformed naine is most frequently applied in Eogland was that at Hampton Court.
of Hampton Court Conforence:
Ch. IIist.: A conference between King James 1. of England, immedlately after his accession to the Southern throne, and the representatives of the Anglican and the Puritan parties in the Church. In Octuber, 1603, the king appointed the conference. lta first meeting was beld at Hampton Court on the 14th of Januery, 1604, Jamee on that day me. ceiving the Anglicans. The second day, January loth, the Puritans were admitted to make their statement and discuss it with their opponents. The third day, January 18th, the bishops and deans were called in to settie with the king what alterations should bo made in the regulations of the Church. Then the Puritans wera called in to have the decision intimated to thern, and the conference closed.
I For the difference between conference and conversation, gee Convensation.

2．Confession and avoidance（Law）：A term used when a plaintiff in his replication to a defendant＇s plea confesses the truth of the facis in the plea；but at the same time intro duces some new matter or distinction com sistent with the plaintiff＂s former declaration 3．Confession of action：
Law：The confession thet an action against one－as，for inatance，to recover a debt－is to a certain extent just，and the payment into court of the amount which ons admita to be due．（Blackstone．）
4．Confession of faith：
Theol．\＆Ch．Hist．：A statement in a care－ fully composed snd well－tested aeries of nro－ positions of the tensts held by the church or religious party adhering to such cenfeasion．

Numerous confessions have been put forth, and among others the following :
(I) The Confession of Augeburg: [Avosbura Confessionj.
(2) The Westminster Confession: A confes sion of fatth drawn up by what was called an Aasembly of Dlvines, but which had also some laymen among ita members, sitting by authority of the Parliament between A.D 1643 and 1647. Ninety-aeven wers Engliah and nine, with two "acribes," Scotch commissioners. The place of meeting was Henry VII.'a Chapel et Westminster. The confession of faith was agreed to in 1643, and was de aigned to be the atandard of belief for the whole kingdom, England as well as Scotland. In the former country, however, it was never cordially accepted by the nation; in the Iatitar it was a0 received. It was rstified by the Scottish Genersl Assembly on Aligus the 1647, and by the Parliament of the northern, kingdom on Eebruary 7, 1649 as it northern more nnder William and wary it was once 1690 . 16s tenets were essentially those of 1690. Reformed tenets were essentially those of the Reformed Churches in genersl. It is still the chief aymbolic book of the Evangelical Preabyteran Churchea in Britain and America, though explanations or qualificalions of the teaching on one or two points are permitted in aome of the churches.
TH The Thirty-nine Articles are a confession of faith in all but the nsme. [Anticlea.]
5. Confession of indictment :

Law: A confession by an accused person that he is gailty of the offence with which he is charged, (Blackstone.)
6. Sacramental Confession:

Theology \& Church History:
(1) Def.: "The habitnal and detailed confession of sing to a priest, with a view of receiving priestly absohtion, and of so becouning better prepared for a faithful and true partaking of the Holy Communion, and of attaining to a bigher standard of true apiritual life. (Bp. of Gloncester \& Bristol, quoted in Times, (2) $-1,18 i t$.
(2) Hist.: Originally notorious offenders were required to confess their sina publiciy before the congregation. There existed als an ancient practice of voluntary confession in public of private offencea and secret sins. In he fifth century Pope Leo the Great gave permission to confess the latter kind of sins in private to a priest appointed for the pur pose. This was the origin of sacramental par fession, which soon after hecame an ins contion, though confession to a priest was tional till the thirteenth to a priest was opcent III., at the fonrth Council of Lateran, A.D. 1215, rendered it compulsory. It has aince continued to be practised in the Roman aince continued to be practised in the Roman by the Ritualistic party to reintroduce it into the Church of Eugland. It has no place in the standards of the English Church, and has been repudiated by the vast majority of its adhercnts, whether clerical or lay. Hooker thns speaks of it: "1 dare boldly affirm that for many hundred years after Christ, the Fathers held no snch opinion ; they did not gather by our Saviour's words' (John ax not any such necessity of seeking (John xx. 23) absolution by secret and (as they the priest's aacramental confeasion (as they now term it) they thought necessary by way of discipline, not private confession gy in the discipline, sacrament necessary." (Hooker: Eccles. Pol a vi., c. 436. )

Ronce : Royal Conver
côn-fëst'-ly̆, adv. [Eng. confest; -ly.] Con fessedly, admittedly, avowedly, openly; with acknowledgment.
"They nddress to that principle which is confestly
cón-rí-cient (cient as chent), a. [Lat conficiens, pr. par. of conficio $=$ to confound, to effect.] That which causes or effects; enective. (Bavey.)
con'rĭ-dant (m.), cón'-li-dante (f.) s. filant (m.), confdante (f.)] (t.); O. Fr. conOne who is entrusted with private secrets, especially one trustal in affairs of love; a bosom friend.

Quick with the tale, and ready with the liobyron: 4 sketch
cōn-fide', v.i. \& t. [Lat. confulo: $\mathbf{c o n}=\mathrm{cum}$ $=$ with, together, fully, and fulo $=$ to trust ; fudus = [aithful, trustwortly ; Fr. confier.]
A. Introns. : To have trust, confldence, or reliance in or upoll; to rely, to trust, to belicve

That I shouid fear, not sociahiy mild,
As Raphati, that 1 ehouid nuch confde"
Milton: P. L., hik. xi.
With in before that in which trust or confidence is placed.

Confting in our want of worth, he stands."
B. Trans. : To entrust or give in charge to another; to commit, to acknowledge.
it had been conndod to two emineut nnen,
II Crabb thus diacriminates letween to confule and to trust: "Both these verbs express a reliance on the fidelity of another, but confude is to trust as the species to the genus; we alwaya trust when we confide. but not vic versa. We confule to a conje, but not vice of the greatest importance to ouraelves. trust to him whenever we rest on his word for anything. We need rely only on a person's integrity when we trust to him, but we rely also oa his abilities and mental qualifications when we place confidence; it is an extraor dinary trust, founded on a powerful conviction in a person's favour. Confidence frequently eupposes something aecret as well as personai
trust respects only the personal intereat. king confides in his ministers and generals the due execution of his plans, aud the adininanation of the lawa; one friend confides in another when he diacloses to him all his private concerns: a merchant trusts to his clerks when he employa them in bia business. individuals trust each other with portion of their property. A breach of trua evinces Want of that common principle which keeps human society together; but a breach of confdence betrsys e mors than ordinary ahare of bascness and deprsvity." (Crabd: Eng. Synon.)
oón-fi'-děd, pa. par. or a. [Confide.]

con'-fǐ-dent, a. \&s. [Lat. confidens, pr. par confido $=$ to conlide.]
A. As culjective:
I. Assured, sure, aecure; having full cont dence or trust.

To huild our attar, confident, and bold, ${ }^{7}$
(1) Followed by a clausa.
"1 ann corfodent, that very, much may he done to (2) Followed hy of.
"Defying earth, aud conadent of heaven." (3) Followed by in. Byron: Lara, IL \&
2. Self-reliant, bold, courageous.

Achilion auswered; all thou knowest, speake and
beconfidernt.
3. Over-bold or full of assurance; presurnp. tuous, conceited.
""A wise man feareth, but the 1001 rageth, and is
4. Positive or dogratic in conversation.
$\dagger 5$. Trusting, withont auspicion.

- Rome, be as fuat and gracious unto me,

Tin And, i 1
6. Truatworthy, confidential.
"I had aiven notice to a companion of mine, a con(1623), pt L., p. 17\% my masteris-dabbe: The Rogue
*. Giving reason or grounds for confidence.
"The canse was more confidont than the event wes

* B. As subst. : [Confinant]
"If ever it cormes to this, that a man cau sar of his

Trabb thus discriminates between conf ent, dogmatical, and positive: "The first two of thess worda denote an habitual or perusof thess worda denote an habitual or perusnent state of mind; the latter eithar a partial or an habitual temper. Thare is mach of con-
fience in dogmatism and positivity, but it expressee more than either. Confidence inplies a general reliance on one's ahilities in whatever we undertake; dogmatism implies s relisnes on the truth of our opinions ; posiivity a reliance on the truth of our assertions A conflent man is siwsys ready to act, as ho is sure of succeeding. a dogmatical man is lware resdy to speak as $h$ is sure of bein lwar. hasr, ; spore has asert ain what he has asserted, as ho is convinced that ha has mado no mistake. Confudence is pposed to diffldence ; dogmatism to acepticism ; posilivity to hesitation. A confiden man mostly faila for want of using the necea sary means to ensure euccess ; a dogmatioal man is mostly in srror, becanse he substitute his own partisl opinions for such as are esta blished; a positive man is mostly deceived becsuse he trusta nore to his own aenaes and memory than he ought. Self-knowledge is the most effectual cure for self-conffuence; an acqusintance with mea and things tends to lessen dogmatism; the experience of having been deceived one's self, and the obaervation that others ars pernetually lisble to be deceived, aught to check the folly of being positive ss to sny event or circumstsace that positive."s (Crabb: Eng. Synon.)
obn-fi-děn'-tial (ti as sh), a. [Fr. confidentiel, from Lat. confidens.]

1. of persons: Trustworthy; entrusted or worthy of being entrusted with matters of mecrecy; trusted in ; freated with confldence. of \& Biffoon first the conflemtial friend, and then the apouse. of the proudert and most porerful of Euro

2. Of things:
(1) Told or communicated in confidence secret, private.
$\therefore \dot{A}-\dot{\text { Bu}}$ we male two confriential communications
(2) Carried on in confidence; relating to private or secret mettera.
"I am desirons to begin a confidential correspon-
ơn-fǐ-dĕn'-tial-ly̆ (tl as sh), adv. \{Eng. confidential; -ly.] In a coufidential manner; in confidence or trust; privately.
 1. In a confident or assured manner; with confidence, trust, or a feeling of security Where Duty bids, he confdently steers.
Conoper: A Reftioction; Horace, hk. h. , Ode a.
3. With confidence or assuraacy; boldly, conrageously
predicting the author's presumption, in so confidently arton: Divine Legation, hk, iii.., 3 .
4. With excessive confidencs or sssurance ; positively, dogmatically.
"Every fool may believe. and pronounce confrdently;

* ơn'-fi-dent-něss, s. [Eng. confident; -ness.] The quality of being confldent ; contidence, sssurance. (Bailey.)
$\dagger$ cơn- ī'dèr (1), s. [Eng. confd(e); -er.] One who confidea, trusts, or has confidence in snother.
* cơn-fĭd'-ẽr (2), cơn-füd'-ẽr, a. [CONfener.] Confederate, allied.

Latiuss congler with Trofanis and Enee

## Are to the fealous confirmurzions atioung <br> As prooft of holy writ

II. Technically: Shakesp.: Oechello, IL 3.

1. Ecclesiol. \& History :
(1) Def.: The act of confirming a child, a young person, or anyone, by the imposition of a Bishop's hands. For further details see (3).
(2) Hist.: The passages adduced in support of this rite ara Heb. vi. I, Acts viii. $14-17$ xis. 5, 6, especially the first of the three Conflrmation was originally administered as the concluding part of the baptismal ceremony whether the baptised person were an adult or an infant. Some think the practice was general by the year A.D. 100 . The primitive mactice in this respect still continnes in the Greek Charch. Chrism, or sacred oiotment as used at least froni the time of Tertulian n the 2 nd century. Tha nnetion was the first part of the cereinony; the second was the consignation, or signing with the sign of the cross; and the third was the impusition of the bishop'a hands, with the invocation of the Holy Ghost. In tha Chnrch of Rome, Con-
firmation fa one of the aeven sacraments, the siga' of the cross, and confirm thee with the chrism of salvation in the name of the Father and of the Son, and of the Holy Ghost." The opposition by tha Protestants in the 16th cenetury to the administration of Confirmation to infants made the Councll of Trent poatpore it to the aeventh year of a child'a age
(3) Present Practice in the Church of Eng Litargy in one place has this bea of hands uran the thrmare baptised, and come to years of discretion.
fathera and godmothers preaent a child of tender years for baptism, the demand is made by the officiating clergyman, "Dost thon, in the name of this child, renounce the devil and worid with all covetous desine glory of the worid, with all covetous desires of the same and the carnal deaires of the flesh, so that thou wilt not follow wor ba led by them?" To thia the reply is made, " 1 renounce them all." At the conclusion of the Baptismal Service the golfathers and godmothers are exhorted to take care that the child le brough to the bishop to be confrmed as aoon as it can say the Creed, the Lord'a Prayer, and the Tea Commandments, besides haviug been to structed in tha Charch Catechism. When these qualifications have been attained, and a snitalle age reached, their names are sent to the bishop, who, if satistied with them, to ministers to them poblicly, with others, the ministers to them poblicly, with others, the ite of Confirmation. On their part they are held to contirm and ratify in their own person the engagements made in their behalf, whilst yet they wera infants, ly their godfathers and godmothera. After questions pmt and answered, and prayer offered, the Biahop lays his hand on the head of each one to be contirmed, with prayer, and then with the pronouncing of a hlessing. None, it ia ordered are to be admitted to the Holy Communion nnless they have either been confirmed or are destrous of being ao.
2. Law:
(1) Eccles. Law: The ratification by an Archbishop of the election of a Bishop hy a Dean and Chapter. Originally the Archishshor hat real power to declino to confirm such: case, but for about 200 years back he has had no liherty of refusing to do his part; nor have the Dean and Chapter been free to refuse to elect the iodividual recommended to them in the Conge délire (q.v.).
(2) Conveyancing: A kiod of conveyance by which a voidable though not a void estata is made "nnavoidable" and valid, or a partictlar estate increased. This can be done hy the insertion of the words "ratified and confirmed," with which are generally associated, for funther security's sake, the other words " given and granted."

Cŏn-f $\bar{u}^{\prime}$-cian-issm, o. [Ëng. Cenfuctan (q.v.), and suff. -ism.]
Ethics, Conp, Retigion, Ilist., dec. The system of welief and practice taught by Confucius. Tha proper Chinese name of this distinguished man was K'urg-foo-tsze, meaning professor of the Chinesc language end litera. ture in Oxford University, he was born of very gool family, in the year b.c. 551, in Lu, one of the Chinese fendal states, covering a conShantung. He married at nineteen; leccame a teacher in his twenty-second year; grew distinguished about B.c. $51 \%$ (i.e., when he was thirty-four), his disciples amounting to thousands; had temporarily to leave La in B.C. $51 G$, owing to civil commotion; lin B. .
500 , when he was fifty-one, became chef 500 , when he was fifty-one, became chlef
magistrate of the town of Clung-tu, wonderfully refermiag the place; was subsequently made auperintendent of works, and afterwards minister of crime in the state of Lut, but had to resign these appointments through the jealonsy of the neigh houring atates; long wandered up and down, teaching aud exerting great influence: returned to Lû, but not to his previons offices, in \&.c. 483, and died in B.C. 478, aged shout seventy-three. Jive fucina, and four by his disciples; the former are looked npon with the same veneration as
the canonical seriptures among ourselv
the latter also are seured.
Confucius was highly distingulshed as Confueius was highly distingulshed as a teacher of ethics. He formulated the golden. rule, which is not found in its condensed ex pression in the old chluese classics. Tszekung having on one occasion asked him if rule of conduct for all the life, he replled, "Is or conduct reciprocity such a word? What you do not want done to yourself do not do to otherg But when Iho-taze, who was his. contemporary, being born in B.c. 601, exun ciated the stil] more advanced morality of returning good for evil, Confucius, being con aulted on the subjeet by one of his disciplea rejected it, saying, What then will rou re turn for good f Recompense injury with Justice, and return good for good."
Confnciue attached very great importance to obedience on the part of children to their parents, and to veneration on the part of people in general to their ancestors. The grarding stl eociety in each klogdom as a great garding all eociety in each klngdom as a great
family, in all circumstances owing passive family, in all circumstances owing passive
obedience to its sovereign. This tenet of obedience to its sovereign. This tenel of
Confucius has readered lils gystem highly Confucius has rendered lils aystem highly
popular with the successive Emperors of popular with the successive Emperors
By most persons Contucianism is viewed simply as a aystenn of ethics and of politics. Prof. Legte is of opinion that it is a great error to fail in regarding it also as a religion. Cenfucius professed to revere the Chinese faith, aad to revive or advocate it, instead of setting it asile. That ancient belief was at. first inonotheistic, lunt in process of time it had hecome corrnited by a snbordinste worohip of multitudinous spirits on the one hand and by superstitieus dividation on the other. Pror. Legge, therefore, regards the term Cozfucianisia as covering first of all the anctent religioa of China snd then the views of the great philosopher himself in illnstratioa ol modification of its teachings, as when there are comprehended muder Christianity the doc. trincs of the Old Testament as well as the New. He worshipped T'ien, Heaven, but Heaven used by metonomy fer God. At the same time there was a more specific word for God, Ti (Lordship or Government), mere fuly Shang Til (Supreme Lordship or Government). which he inight have employed, but ignored. Daring the thousand years which preceded the twenty-third century g.c. there had been instituted a worship of God for all the people, the ofliciator being the kine: also a worship o ancestors by all, or at least by heads of fanilies for themselves and their househoids. Sulistitution had no puace in the religious sacrifices. A part of filial jiety was the worship of pareats; that of forefathers gencrally was also enjoined, prayers being ofleved to the dead. Notling is stated explicitly about the 8tate of the departed, Future retribution is hu this life. As a religion Confucianism is hetter adapted to the more thoughtful of the Chinese than to the common people, the Boer reeling more attached to Boodd commixtures of the several faiths frequently cecur. (Prof. Legge : Religions of China(1880), occur. (Prof. Legge : Religions

 congelacio; Sy. congelacion; Port. congelaçio; Ital. congelazione, from Lat. congelatio (genit. congelationis).]
I. Ofdinary Language:

1. The act of causing to congeal or freeze, or of rendering solid.
"The caplllary tobes are obstructed elther br out.
ard compresson or congelation of the flud. buthnot: On Aliments
2. The state of being congealed, frozen, or rendered solid.

Many waters and springs will oever freeze: and many parta la rivers nan lakee, where there are mine-
ral ernytions, will stII lerast without congelation-ral emptionz, will still per
3. A congealed mass, a concretion.
II. Nat. Phil., Chem., \&c. : The passage of a body from the liquid to the aolid atate. Two known laws regulste the phenomenon: 1st, Every body under the same pressure solidifies st a fixed temperature, which is the same ss that of fuaion. 2nd, From the conmencement to the end of the solidification the temperature of a liquid remaina constant. Some fats are exceptions to the first rule.
Many liquids, viz., alcohol, ether, \&c., have not been aeen soliditied. Most, however, can be reduced to thia atate. In ordinsry cases liquids hecoming solid necupy less space than they did before congelsion took place, but water is a notable exception. It expands sbont 10 per cent. at the noment of passing into ice, hence when frozen in the crevices of rocks it tenda to rend them ssunder. Frequently a liquid, on becoming aolid, crystal lises; water occasionally doea ao. [nisow chystals.] (Ganot.)
cṑn-gèl'-a-tǐve, $a$. [Conoealative.]

* cön-ġèle', v. [Conozal.]
cŏn-gěm-n̄à'-tion, s. [Fr., from Lat. congeninatio, from congemino $=$ to double, to dunlicate; geminus $=$ a twin.] The act or procesa of doubling or dupliesting.
corn'-gěer-nẽr, s. [Lat. (as adj.) = of the sama race, (as aubst.) $=8$ joint son-in-law.]
$\dagger$ 1. Ord. Lang. : A person of the same race as another, or an animal or plast akin to another.

2. Biol.: An animal or plant of the same genus as another, using the term genus in a strictly scientific sease.
"It rums (in contralialinetion to boppingh but not quite so qulckly ha sone of lits congeners", -Darwin:
'cơn-gĕ́n'-ẽr-a-çy̆, s. [Lat. congener; a connective ; and Fung. suff. -cy.] Similarity, affinity, community of origin.
"That they are ranged meither nceording to the
merit, nor congeneracy of their conditious, - Nore: merit, nor congeneracy,
Expos. Seven Ch, p. 172.
"cŏn-ğğn'-ẽr-āte, v.t. [Lat. congeneratus, pa. par. of congenero $=$ to beget or protuce at the same time.] To produce, to originate.
"Tbat which did comgenerate the colour is fitted
with whiteness, ch. aiL whiteness
cŏn-ǧěn-ĕr'-ic, cơn-ġěn-ĕr'-ic-al, a. [Lat. congener (genit. congeneris), and Eng. suff. -ic, -ical.] [Conoenerove, I1.]
"10 the Stork nad congeneric Mrda"~Todd: Cyclop.
cŏn-̇̀ĕn'-ẽr-oŭs, a. [Eng. congener; -ous.] I. Ord. Lang. : Of the same origin, kind, or nature; allied.
"In thle place we shoald totroduce the wolf, a con-
generous anlwal, The Fout:
II With the prep. to.
eiдариєи, congenerous to this ane those onmes of Cabbula, p 111 .
II. Technically
3. Anat.: Coucurring in the same action (said of mnscles).
4. Nat. Hist.: Belonging to the same or an allied genus; congeneric (q.v.).
 ous; -ness.] The quality or state of being congenerous or of the same origin.
" Rational means, and perranarive aryumenta, whose Yorce and strenth miat yye tit heir congoneroustert. tions of truth apoa our soulan-Bahiwell: Helam.
odn-sëreni-al, a. [Pref. con, and genial (q.v.).]
5. Partaking of the same kind, nature, or origin; allied, cognate.

## "Welcome kindred Glooms 1 Congentat Horrors, hail Thomeon: The Seaton

2. Naturally adapted or auited.
". .- celemency nad moderation which were by no mirn $E \mathrm{Eg}$. chi xiI
3. Partaking of the same natural charecterlatics; aympathetic

- Bat, as two voyces in one Eong embrace
 Berkenhead: On the Colleation of Fletever': Works.

4. Agreeable, pleasant.
ing The congenial ound of the cathedral bell hover
 The quality of being congenial, or partaking of the same nature or kind.
"O..at by the analogy, whiteh palating bolds with the aster arts, and consiseq Deutly by the commmog comp
genaizity. which they all bear to our nature "-Sir $J$.

* eton- ${ }^{-1} \bar{e}^{-}-n 1$ i-al-ize, v.i. \& t. [Eng. conge. nial; -ize.]
A. Intrans. : To partake of the same nature or feelings ; to sympathize.
D. Trans.: To make congenial.
cồn- ${ }^{\text {® }} \bar{e}^{\prime}$-nĭ-al-nĕss, s. [Eng. congenial; -ness 1 The iupality or state of being congenisl; congenislity.
* cón-gंē-nīoŭs, a [Conoemial.] Of the same nature or claracter; allied, akin, similar.
 genitus = born together, with : con $\Rightarrow c \mid=$ with, together, snd genitus $=$ born.] Bern or coming into existence at the same time with semething else ; connate.
"Many coocloniond."- seompen npon this aocoont, to
cơn-ğĕn'-ǐ-tal, a. [Lat. congenit(us); Eng anff, al.] Born with one; constitutional dating from birth; natural.
"Mortld chapge or congenital defect" - Todd
Bowman: Phyniw. $A n a h, ~ v o L, ~ 1, ~ c h . ~ 1 i . ~ p . ~ s i a ~$
 -ly.] Constitutionally; from birth.
- cŏn'-geòn, s. [O. N. F. * cangiun, from combionem, sccus. of Late Lat. camivo. (N.E.D.)]

1. A chsngeling; a half-witted person, an imbecile.
2. A durarf; a deformed person.
3. A contemptuous term for a child; a term of dislike or abuse
 gyre, * con-gyr, + cun-ger, * cungyre, * cun-gur, * kun-ger, s. [Fr. congre; Sp. congrio; Port. congro; Ital. gongro, sll from Lat. conger, congrus; Gr. yóypos (gonggros) $=$ a sea-ecl. Ste the def.]
I. Lit.: A large sea-eel, Conger vulgaris of Cuvier, Murena Conger of Linneas. It ia of the fanily Murenide. It is 5,6 , or, in rare cascs, even 10 feet loug. Its upper parts are brownish-white, snd the lower dirty-white : the latersl line spotted with white, the dorsal and anal fins white margined with bisck. It is common on the coast of Britain and of other European countries. A smaller species, Conger myrus, is found in the Mediterranean.
"Congar, fyssbe. Congre""-Patsgrave.
4. Fig.: A term of abuse applied to e person.
" Haog youreli, you moddy conger, hang yourvelt!

oxternal ecclesiastical anthority. They recognize a ministry, have deacons as subordinate ralers in the congregation, but allow the congregation itself to decids who sre fit to joln its ranks, and to act with judicial power in cases of discipline.
Cờn-grĕ-gā'-tion-gl-ist, a. \& s. [Eng. congregational; -ist.]
A. As adj.: Pertaining In any way to Congregationalism, or to the sdherents of that gregationalism, or of Chnrch government.
B. As substantive :

Ecclesiol. \& Ch. Hist. (pi.) :
(I) Def., ic. : The adherents of the form of Chnrch gevarnment called Cougregationalism or Independency, or the membera of the religious danomination in which theas views have been carried out. They are often termed indepeadents, the latter name reforring to the fact that their several Churchea are indepen. dent of esch other, and in apiritusl mattera of the civil power; and the terin Congregationallsta makes it prominent that aeparate congrsgationa have self-government to sn extent which they do not posseas in some other rellgious bodiss.
(2) Ch. Hist. : Congregationallats in genersl believe tineir form of Church government to be of Divine anthority, and to have been that of the Apestolic Churehes. The sdherents of Epiacopacy and of Preshyterianism, \&c., on the contrary, reject thia view, and put in ainuilar clains for their own aystema
Among the sects which from the 13th century separated from the dominant Church, gome doubtless had no closer bond than that of traternal sympathy between different congregations. To descend to niors modern times, the tenets of Robert Browil [Brownism] were essentially thess of modern Congregationalism. Ho was born about the middle of the 16th century, and was a near relative of ths Lord Treasurer Cecil. He was first a preacher, then a schoolmester, and afterwards a lecturer. From about 1585 hs inverghed with tiery veheFrom about 1585 hs inveighed with fiery vehemence against ths corruption, and to a certain
extent against the constitution, of the Eatabextent against the conatitution, of the Eatab-
liahed Church, his philippies heing varied by lished Church, his philippics cingers, some of them in cells whore le could not gee his hand at noonday. Notwithstanding all efforts to intimidsts him, he succeeded abuut 1693 in setting up a congregation in London. Those in favor of his doctrines wers then eatimated st 20,000 in number. After a time many of them, with Mr.. Brown himself, were ohliged to remove to Holland, where seversl Churches were set up. There they were free to act according to their convictions, but falling into divisions among themselves, they so disgusted their lesder that he returned to England, contheir lesder that Fistablished Church which he had so vehemently and persistently denounced, and became rector of a oliurchi in Northamptonshire ; was negligent in the discharge of his duty, if not even dissolute in life, and died in 1630, in prisen, where he had been confined, not for the saka of conscience, but for striking a constable.
Among the Chnrehes in Holland one was founded at Leyden, by Jacobs and Brown, in 1816. Mr. John Robinaon soon after becans miniater of the Church. Hs modlfied the Brownist tenets, readering them less extreme, and is by many regarded as the real foundibus independsncy. In his "Apologia pro Exulibus Angtis, qui Browniste vulgo appellantur,
pnblished at Leydsn in 1619, the Lattn word independenter ( = indspendently) occurs, whilch may have been the origin of ths word inde did not how applied to men or 1640 and 1642. It eccurs in the title of a work, "A pologetical Narrative of the Independents," onhlished in 1644 . In 1616 Henry Jicols returned to England from Holland and founded a meeting-house. It was the fret unequivocal Independent or Cougregationa! church in EngIndependent or Cougregations! church in Eng-
land. In 2620 a part of Mr. Robinaon'e conland. In 1620 a part ol Mr. Robinaon'e congregation st Leydsn removed to Plymonth, in
New England. They were followed by otiers of the same denomination, as weil as by jerascnted Puritans generally all through the 17th century. Thers the foundations of the Independency or Congregationalism of the New World were lald dsep snd broad.
In Mr. Robinson's modification of the Browniat doctrinea a singla ruling officer, or elder, replaced the body of elders which had bsen deviead by Barrowe as a governing body, restoring to the congregation that control of its own affaire whlch Harrow's device had partly taken away. As thue constituted the Daydower community practically governed treif under the judicious counsel of its eider. The Salem coloniata, whe cams over nine years later, wars not Iudependenta, but the method of church gevernment in vogue at Plymouth aeamed to them so suitable to their requirements, far removed, as they wers, from their Euglish brethrsn, that they adopted it, and formed themselves into an Independent Church, which they made Congregational by taking the right hand of fellowahip from Governor Bradford and his fellow delegates from Plymouth. The coloniats who followed quickly fell into line with their predecessors, and Congregationalism became the ruling church method in New England, though with a certain element of sristocracy which was not eliminated until after the Revolution, wheo the Church became purely and fully demecratic the Church became purely and.
American Congregationalists to-day recog nize the right, and hold it to be the duty, it believers who ars ao sitaated thst they can conveniently worship and work together, to organize themselves by mutual covenant as a church. Thits organization beconies Congregational through its public admission to their fraternity by the neighboring Congregational churches. Each auch church has a pastor a ud deacons as officers and a working committee chosen by the congregation for the purpose of laying out and making efficient the work of churches and there may be advice and admuni tion under extraurdinary circumatances, and ecclestastical cooncils may be held for euch ecclesiastical cooncising of any new chureh or purposes, the welcoming of any aew the council The council doee not exist among Eoglish Con gregationalists. The Congregational churches of the United States have been uniteI, eince 1871, into a National Council, which meets every third year. It is made up of delegates from the churches and communicants of the whole land. Congregationalism epread slowly in the United States, it having scarcely extended beyond the boundaries of New England by 1800, the members who moved to new localitios generally hecoming Presbyterians. Since the Civil War there has beon a marked change in these particulars, and Congregationalism has spread with much rapldity, its churches mow existing in every part of the land. It poot aesses a considerable number of missionary and other associations and theological semi ngries, pnd is in a cundition of encouraging growth.

II. Hiarry, Political Geography, \&c.:
3. In the same senas as 1.1 (q.v.).
4. Tha legialature of the United States, conaisting of a Senate and House of Representa. tives. Whilst yet the Britteh aettlers in North america were colonists only, occasions arose when it was needful for them to cooperste for the attainment of particular enda. They did an in 1745 for the capture of the French fortifled port of Lonisbourg in Cajee Breton, and in 1754 for holding a conference with the Indian tribea north of New York. The War of Endependence made the union of the scattered colonies closer and more permanent, and the governing body then established developed inta the present Congress. The American Congress minst assemble at least once a year, the day of meeting being the first Monday of December. The Senate consists of two membera from each state. They are chosen by the legislature of each state for six years, one third of them elected shenmially. The Vice-President is ex offeio President of the Senate. The numbers of the House of Representatives are apportioned to the several states according to popolation; they are elected for two years. All money bills must originate in thia House, which corresponds to the House of Commons in England.
If Among modern congreases may he mentioned that of Munster, A.D. 1643-1648, which put an end to the Thirty Yeara war; that of het between England, France, Holland, Germany, between the that of Utrecht, in 1713, aigned between the Ministers of England, France, and Spain, the Emperor Charlea VI., however, holding out. Coming to more modern times, a congress of sovereigus, or their representatives, was held at Vienna to arrange about the resettlement of Europe after the great disturbance of ancient landmarks produced by the wars of the first Napoleon. A congress was held at Berlin between June 13 and July 13, I8i8, the British renresentatives being Lords Beaconsfleld and Salisbury, to bubmit to the judgment and decision results of the Russo-Turkish war. At this congress our country obtained the permission to hold under the Porte the island of Cyprub, to be used as a place of arms whence Turkey might be defended if war again broke out.

 hydr(ate); and auff. -ine (Chem.) (q.v.).
Chem.: $\mathrm{C}_{8} \mathrm{H}_{47} \mathrm{NO}$. An alkaloid, which is contained in the flowers and ripe seeds of hemlock, Conium muculatum. It is obtained, along with conine and ammonia, by exhausting the fiowers or the aeeds with hot water, acidulated with aulphuric acid, aupersaturating with bydrats of potassium, and distilling. The diatillats is nentralised with sulphuric acid, and evaporated on a water-bath, then absolute alcohol is added, which precipitatea ammonia aulphate. The aolution is then evaporated to remove the alcohol, then supersaturated with concentrated potash, and shaken with ether. The brownish-red ethereal solution is aeparated and evaporated on a water-hath, heated to $200^{\circ}$, and distilled in a stream of hydrogen in an oll-bath. The conine is pnrifled by nentralising with hydrochloric acid and recrystallizing from alcohol. Conhydrine remains in the retort, and on heating sublimes in the upper part and neek of the retort. $1 t$ is purified by crystallization from ether. Conhydrine cryatalizee ln pearly iridescent laminæ, which melt at $120^{\circ}$, and boil at $225^{\circ}$. By the action of phosphoric anhydride, $\mathrm{P}_{2} \mathrm{O}_{5}$, it is converted into conine. It is a narcotic, but less powerful than conine. Conhydrineaulphatecrystailizes in flat prisms, readily aoluble in water.

A. As adjective:
I. Ord. Lang. : Shaped more or less like a mathematical cone. [CoNe.]

And "Tith a polnted ayear dividile the atice:"
"Elldon in a high hill, terninating in three conicat
II. Geom.: Pertaining to the mathematical figure called a cone. [Cone.]
B. As subst. : A conic section. (Brande.)
conic nodes, s. pl.
Geom.: A mathematical term occurring in calculation regarding cubic surfaces repreaented by a commen apex of two cones. (Rossiter.)

## conic sections, s. pl.

## Geometry, Algebra, \& History :

1. Geom.: That part of geometry which treata of the parabola, the ellipse, and the hyperbola, produced by sections of a right cone, imade in three different ways. If a right cone be cut by a plane parallel to a plane which touches the cone along the alant side, the resultant figure will be a parabola; if the aection be made through both alant aides, it will be an ellipse; and if one aide be eat through by a plane which, produced backwards, cuts the other aido likewise produced, the aection constitutes a hyperbola. Two other geometric figures can be produced when a cone is cut by a plane. If ths plane cut
from the apex down vertically to the bese, a triangle is produced, whilat if it do so parallel to the base a circle ls the resultant ; but conventionally a triangls and a circla are sxcluded from the liat of "conic sections," the term being limited to the three flgures first mentioned.
2. Alg.: Algelralcally viewed, conic sections are curves of the second degree-i.e, the carvea belonging to such equstions between co-ordinstes are of the second degres.
3. Hist. of Geom. : The Greeks studied conic sections shout the time of Plato, B.O. 890. Ahout b.c. 330 Aristeeus wrote s treatlss on them, and Apollonlus eight books on the subject about B.c. 240. But in the hands of the Greek geometricians no special interest was known to attach to conic sections. Their value was not perceived till Gaslileo discovered that projectiles move in parabolic curves, and Kepler that planeta do so in elliptical orblta. Now conic sections are regarded as an indispensable part of the higher geometry, with contional application to natural philosophy.
còn'-1̈-cạl, a. [Eng. conic; -al.]
4. Ord. Lang.: The same as Conic, a. (q.v.).
5. Bot.: Hsving the flgurs of a trus cone, as the prickles of some roses or the root of the carrot. (Lindley.)
conical-gearing, s. An arrangement of gearing in which a pair of cogged cones transmit throngh interposed pinions motion of the required spead.

## conical-pendnlum, s.

1. A pendulum of a conical shape, suspended by a wire, and moving in a circular Irath in a horizontal plane. [Pennulum.]
2. A term sometimes spplied to the rotating ball governor. ( $K^{\prime} n i g h t$.)

## conioal-points, s. pl.

Turnery: The cones fixed in the pillars for supporting the body to the torned; that on the right hand is called the fore centre, and that on the left the back centre. (Weale.)

## conical projeotion, $s$

Geom. : A method of projecting a part of a ephere upoz a plans. A cone is formed which tonches a sphere in a small circle, and the several points of the sphere are then projected npon the cone by lines drawn through the centre. This being done, the parta adjacent centre. This being done, the parta adjacent to the sunall circle of contact wil be found projected into figures very like the originals. In Flamsteed's projection the degrees of lati-
tude are mads equal, which is very nearly tude are made equal, which is very nearly
accurate; and the parailels of latitude are accurate; and the parailels of latitude are perpendicular to the vertical right lins into
which the middle longitade circle is thrown. Which the middlas longitude circle is thrown. The proportlons in length between the meridians of longitudesnd the parallels of latitude sre made everywhere the ssme as on the actual globe. This plan, sllghtly modifted. was adopted by the French.

## conical-pulley, s.

Mach.: A kind of pulley used in cotton mschinery, where a gradually increasing or mschinery, where a grainally ncreasing or
decreasing speed is required. [Conk-polley.]
conical-valve, s. A form of valve for water and steam-engines. (Knight.)
conical-wheel, s. A wheel shaped like a frustum of a cone, snd used in many ways as a roller for turniog curves in moving heavy bodies; the cone-pulleys are forma of wheels bodies; the cone-pulleys are forma or wheels for changing spesd; used in apinning-machines and lathe-heads; the fusee is a conical-whee
còn-ǐ-căl'-1-ty̆, z. [Eng. conical; -ity.] Conicalness.
eŏn'-1-cal-1y̆. adv. [Eng. conical; -ly.] In the form of a cone.
a watering pot, shaped conticatly, or like a
cŏn-ical-nĕss, s. [Eng. conical; -ress.] The quslity of being conical.
cö-ni-ohay'-çite, s. [Ger. konichalcit, from Gr. кovia (konia) $=$ dust . . . lime-powder, and $\chi$ adxos (chalhos) $=$ copper.]

Min.: A green, malachite-looking, brittle mineral. Hardness, 4.5 ; sp. gr., 4.123. It is composed of arsenic acid, 30.68 ; phosphoric acid, 8.81 ; sesquioxlde of vanadium, 1.78 ;
oxide of copper, $31 \cdot 76$; $\mathrm{lims}, 21 \cdot 36$; 3nd water
obn'-1-cine, \& The same as Conine (q.v.).
toonn-Y'-çI-ty, a [Eng. conic; -ity.] The quality of being conlcal ; conlcaluess.
cŏn'-1-cō, in compos. [Or. к $\omega \nu$ (kós (kōnikos) = cone-shaped.] Shsped to a certain oxtent like a cone, but presenting still grester resemblaucs to a figure indicated in the second word of the componnd.
conioo-cylindrios, $a$. Nearly cylindrical, but yet tapering at ons snd, so as to form part of a long cone.
oonioo-hemispherical, a. Essentially hemispherical, but with resemblances to s short cone.

## conico-subulate, $a$.

Bot., de.: Awl-shaped, but to s certain extent resembling s cons.
tcŏn-10-0'-vāte, a. [Eng. conic, and avate.]
Nat. Science, dc. : Ovate-i.e., egg-shapedbut to a certain sxteut resembling s short cone.
con'-ios, s. [Conic.] The department of mathematics called conic sections, or the curves described under it. [CONIC sections.]
cō'nǐdee, s. pl. [Lat. conus; and fem. pl. sdj. suff. -idxe.]

1. Zool.: Cones, s family of gasteropodous molluses, order Siphonostomata. The shell is inversely conical, with a long and narrow aperture; the onter lip notched at or near the suturs; sud operculum minute. The snimal has an oblong truncated foot, with s pore in the middle; tha tentacles far spart, eyca on the tentacles, the gills two, long liogual teeth in pairs. They are very predatory, and bite when touched. Geners-Conus, Pleurotoma, and Cithara.
2. Palcont. : The Conidæ commence in the Cretaceous rocks, are numerous in the TerCretaceous rocks, are numerous in the Ter-
tisries, snd reach their msximum in the present seas.
cō-ňid'-1-б-phöre, s. [Mod. Lat. conidia; Gr. фе́pu (pherō) = to bear.]
Bot. : One of the brenches in fungi which bear conidla.
cö-nid'-í-ŭm (pl. cō-nld'-1-a), s. [Mod Lat. dimin. of conus =a little cone.]
Botany :
3. Sing. (Conidium): The gonidium of a lichen, one of the green spherical cells in the thalins of a lichen conatituting the distinctive mark betwesn that order of planta and Fungi.
4. Pl. (Conidia) : Certain small reproductive cells on the apawn, mycelium, and other psrta of certain fung occurring in addition to their ordinary fructification.
oō'-nĭ-för, 8. [Lat. conus $=$ a cone, and fero $=$ to bear.]
Botany :
5. Sing.: A tree or shrub of the order Conifere ( $q, v$. .
6. Pl. (Conifers): The English name given by Lindley to his order Pinscex, generally called Conifere (q.v.).
©ō-nif-ẽr-80, s. pl. [CONIFER.]
7. Bot.: An order of plants, one of those re cognised in 1751, in the infancy of botany, by Limnæus. Jussien in 1789 adopted the name. Lindley altered it to Pinaces, but retained the term Conifers as its Euglish equivalent. Formerly be called them Conacea. They belogg to the class or sub-class of Gymnosperine. They are fine trees or shrubs abounding in resin. Leaves linear, acerose, or lanceolate, entire st the margin, often fascicled. luflorescence amentaceous, each floret with one stamen or s few united; ovary spread open : it arises from the axil of a membranuos bract ovule naked in pairs or several inverted. Fruit, a cons [CONE]; embryo with two or many cotyledons. lindley divides it into two suborders, (1) Abietex, with the ovvies in verted and the pollen oval, carved; and (2) Cupressse, with the ovules erect and the polten spheroidal. Sometimes the Tsxinea (Yews) tigure as a third, but Lindley makes them a distinct order, and calla tham Taxaceæ (Taxads). Nearly 200 species are known.

They are most useful to man, oupplying timber, with oil, resin, and turpentine. Tbey aro diffused over the world. Their appropriate habitat is in temperste climates; when in the tropica it is generally high on the mountainsidea.
2. Paloont.: The wood of the Conifere may be distinguished from those of ordinary dicotyledons by the sbsence of proper ducts in the woody layers, snd by the presence of large areolsr disca on the walls of the wood cells. The wood of the Yew (Taxus baccata), snd tho Douglas Fir (Abies Dotiglasii), are exceptions to this rule. On the other hand, the Winterem, which are not coniferous, but belong to the Magnoliads, have similar circulsr disks. When by the chemistry of nature wood is ailicified, thess areolar discs are st least sa visible undsr the microscope as in recent coniferous wood; and when they occur in fossil stems, or frsgmeuta of stems, these ars presumably the remains of Conifere. The ducta or glands also sid in distlinguishing genera. When in double rows they are placed side by side ln the European pines snd tirs, but are arranged alternately in the Arancarias. The Conifera commencest least as early as the Devonian. They ars woll represented in the Carboniferous rocks, being associated there with the bigher Acrogens. They flourish through the Secondary period, and on to present times. The Carboniferous Conifers may lave been taxoid (Yew-like), Conougle the genus Pinites also occurs. The thongh the genus Pinites also occurs. mo speciea in the Secondary rocks were more
akin to the Araucaria of our gardens than to akin to the Ar
ordinary pines.
oō-nìf
Chem.: A glucosids occurring in the cambium of coniferous woods (Abiesexcelsa, Pinue Strobus, Larix europera, \&c.). It forms needle-shaped cryatals, $\mathrm{C}_{16} \mathrm{H}_{22} \mathrm{O}_{6} \cdot 2 \mathrm{H}_{2} \mathrm{O}$, which effloresce in dry air, give off watet at $100^{\circ}$, and melt at $185^{\circ}$ : soluble in hot water, and slightly soluble in slcohol. With atrong sulphuric scid coniferin gives a violet colour, turning red on diluting the sulphuric acid solution a blus resin is deposited. Coniferin boiled with dilute acids is converted into s resin and glucose.
cō-nĭfi-ẽr-čl, s. [Eng., \&c., conifer; Lat. ol(eum).]

Chem. : Coniferyl slcohol, $\mathrm{C}_{10} \mathrm{H}_{12} \mathrm{O}_{3}$, or $\mathrm{C}_{6} \mathrm{H}_{3}\left\{\begin{array}{l}\mathrm{OCH}_{3} \\ \mathrm{OH}_{3} \mathrm{C}_{4} \mathrm{OH} .\end{array}\right.$ A substance isomeric with ethyl vanilhin, is formed along with glucose by the action of emulsion and water on conferin. Coniferol forms white prismatic crystals, melting at $74^{\circ}$, soluble in ether, aud forming a red solution with sulphnric scid. If dissolved by alkalies sod reprecipitated by acida, it in thrown down as an smorphous white powder which turns brown. Crystallised coniferol exposed to the sir smells like vanilla; by oxidation sud agitation with ether it yields vanillin.
cō-niffeerr-oŭs, a. [Lat. \& Eng. conifer, and Eag. suff. ous.]
Bot. : Cons-bearing. Used specislly of trea and shrubs belonging to the order Conifere, though what sre technically "cones" are not contined to this order; and the berries of some geners, Junipers for instance, formed interoally on the model of a cone, look to the univitiated quite different.

A. As adjective:

1. Geom. \& Optics: So related as to be in terchangeable. [Conjuoate axes, Minrore, terchangeable. [Con
Pornts, Lines, \&c.]
2. Bot.: Paired. Used spec. of the petiole of a pinnste leaf when it bears one pair of leaflets.
B. As substantive :
I. Logic: A term applied to a word having the same derivation as another, and therefore generally resembling it in meaning.
3. Chem. : A conjugate compound.

I (1) Conjugute axes:
Geom. : Two axes so related as to be interchangealule in position.
(2) Conjugate compounds:

Chem.: [Conjuoated].
(3) Conjugate mirrors:

Optics: Mirrors, the relative positions of which might be interchanged without sitering the resnlt.

Ti The experiment of the conjugate mirrors: Pictet and Saussure placed two such mirrors shout four or five yards apsrt with their axes coinciding. In the focus of one they placed coinciding. In the focus of one they placed
a wire basket, containing a red-hot ball, while a wire basket, containing a red-hot bal, while
in the focus of the other was a piece of gunIn the focus of the other was a piece of gun-
cotton or phosphorus. The effect was to cotton or phosphorns. The elfect was above or helow the focus it did not take flire. This demonstrated the existence of foci in connexion with mirrors, whilst exhibiting slso the laws of reflection. (Ganot.)
(4) Conjugate points, lines, \&c.:

Geom.: Two pointa, lines, \&c., are said to be conjingate when their relative positions might be interchanged without any alteration in the language used in describing that property or those properties of theirs to which reference ia bcing made. To this a writer in the Penny Cycloperdia points out that there is an apparent exception-viz., the conjugate point of a curve, by which is meant a single point lying by itself, the co-ordinates of which satisfy the equations of the curve withont its sctually being on the continmous branch of that curve. To abolish this snomsly of lan. guage ba proposes to call the latter case the conjunct instead of the conjugate point of a curve, or to term it an evanescent oval.
cơn'-jụ-gā-tĕd, pa. par. \& a. [Conjuonte.]

[^176]
## - conjugated compounds, s. pl.

Chem. : Also called copulated compounds. A term Introdnced in 1839, by the French chernists Laurent and Gerbardt, to designate chemists Laurent and Gerbardt, to designate direct unlon of two bodies, with elimination direct unlon of two bodies, with elimination of water, snd are capable of reprodncing the
original bodies by again taking np the eleoriginal bodies by again taking ap the ele-
ments of water." The term is now ont of use.
conn'-jun-gā-ting pr. par., a., \& \&. [Consu--ati, v. 1

cǒn-ju-gā'-tion, s. [Lat. conjugatio = a join. ing together, from conjugatus, pa. par. of conjugo $=$ to join together: con $=$ cum $=$ with, together; jugum $=$ a yoke; jungo $=$ to join.)

* I. Ordinary Language:

1. The act or process of uniting or joioing things together.
-Tho geveral and indefioite contemplations and notions of the elemetts, and
2. A combination, a mixture.
varions mixturea and conjugationt of etoms --Bentley : Sermons
3. A nnion or assemblage.
"The supper of the Lord is the most eacred, mysts.
rious, and nsefui confugation of eecret and holy things rious, and usefui confugrtion of mecret and holy thiags
4. A unioo or joiuing together in matrimooy.
"Attested, gind. his approbation
Of an immediate con jugation" Cowper: Pa iring-time Anticipated.

## 5. A pair, a couple.

II. Technically:

1. Grammar:
(1) The inflection of a verb.
"Have those who have writ so much ebont declen-
aions and confugations, aboni concords and syntaxes,
 Locke.
(2) The act of conjugating or inflecting a verb.
(3) A number or class of verbs conjugated

- There are in English two conjngations, an old or stroog oce, and a new or weak one, accordiog to the method of forming the past tense. in the former it is expressed by vowelchange only, as shake, shook; it the latter by the addition to the verbal root of the syllable $d$ or its euphooic anbstitute $t$, as love, loved. Weak verbs sometimes have a change of yowel, as buy, bough-t, teach, taugh-t, though they geaerally form the past tenas and past participle by the addition of ed, or (whea the infioltive ends io $\ell$ ) -(e)d.

2. Biol. \& Phys.: A proceas occurriog amoag come of the lower placta and aoimals, in Which the substance of two distinct organisms comes into contact, and becones fused into a single mass or "zygoite." Always in plants, and sometimes in animals, it is connected with reproduction. Anoug the former it has been met with in the following algal groups: Zyguemacer, Desmidiaceæ, Diatomacer, and Pitlmellaceæ; and among the Fungi, in genera which contsin sonse of the plants giving ribe to mildew. Io the animal kingdom conjngation is produced by the more or less complete fusion of two, three, fonr, or more individuals. Example: Podophyra pyrum, an infnsorian. The process is called also zygosis (q.v.). (Grifith \& Henfrey.)
"In the eimpleat celliular plants, in which every there fors no kind of apecinizization of function, the generative act coosjats in the conjugation of two of

junctio, from Lat. conjunctus.] [Consuncr.]
I. Ord. Lang.: The act of conjoining together, the state of being conjoined; union, association, league; that which conjoins.

- We will nnito the white rose and the red:

That loag hath frownd upon their ennity
II. Technically:
I. Astron. (Ofthree heavenly bodies): The state of being in apparent nnion with each other. Ons distioction is between equatorial and ecliptic conjunction. Two heavenly bodies are said to be jo equatorial conjunction, or, more said to be io equatorial conjunction, or, more
briefly, in conjunction with respect to a third, when they have the same right ascension measured on the cquator of the third. Simillarly, they are in ecliptic conjunction with respiect to it when they have the same longitude measured on the ecliptic of the thirid. Both conjunctions take place during the eclipse of the sun, though at different moments, unless the eclipse be exactly central. Another division is into a superior and an inferior conjunction. In the case of one of the inferior planets (Mercury and Veaus) its coojunctions with the sun are the points of nearest approach to it, the inferior conjnnction occurring when the planet passes between the earth and the sun, and the former when it does so behind the great luminary. The conjunction of a superior planet occurs when it is in the same line as the earth, on the same side of the sun. Planets may also have conjunctions with each Planets may also have conjunctions with each periodic timea of Jupiter and Saturn being to eachother in the proportion of 2 to 5 , and their axes being moreover different, conjunctions between them will successively take place at different parts of their orhits. For about 450 years ons planet makes the other move more quickly than its normal rate, and then for 450 more slowly than it, things reverting to What they were at the beginning after 900 years. The extreme perturbation will be $1^{\circ}$ that ia, $2^{\circ}$ in all. Apparent conjunction supposes the spectator on the surface of the eath, true conjunction imsginea him to be lowking from its centre.
". . the duration of the month, as markeal by the
ropointion of tha tncon round the earth and its return
to conjunction with the eun, To colntion of tha tncon round the earth, and its return
2. Gram.: A part of speech joining together sentences, parts of aentences, sud aingle worda; as, "Judsh was hia sanctuary, and Iarael his dominion" (Ps. cxiv. 2); "The aea saw it, und fed" (ver. 3); "Still waters, but deep." The conjunction does not, like the prepoaition, slter the case of the uonn or pronom following it; as, He und I. There sre two classes of conjunctions, coordinating and subordinating conjunctions, the former joining coordioate clauses and tha latter miting subordinatiog or dependent clauses to the princlpal clause of a sentence. (Bain: Higher Eng. Gran.)
côn-jŭh̀'c'-tion-al, a. [E.ng. conjurction;-al.] Pertaining to or of the nature of a conjunction.

* conne, v. [Con, Can, v.]
cobn-nĕct', v.t. \&i. [Lat. connecto $=$ to fasten or tie together: con $=\mathrm{cum}=$ with, together, and necto $=$ to bind, to tie. $]$
A. Transitive:
I. Lit.: To join, link, or fasten together ; to unite.
"The corpuscies that constituts the quicksilivor will II. Figuratively.
I. To unite or link together by sorne bond relation, ar association.
direct the syllogisms. of the connecting ideas must

2. To form into or foin in a series; to link together.
3. To associate with anything as a cause or result.
"That there may have been some historical groudd resting on a taintitul oofictal tradition, or comnecting the walue of servius. Witi an arraugement of the

4. To join or unite by marriage (generally naed in the par. par.)
B. Reflex. : To join or associate oneself with another, or io any business.
C. Intrans.: To unite, foln with, or collere; to have a close relation or association witb.
© Crahb thus discriminates between to connect, to combine, and to unite: "The idea of being put together ia common to these terins, but with different degraes of proximity. Connected is more remute than combined, and this than urited. What ia connected snd combined remsins distinct, but what is united loses all individuality. Things the most dissimilse may be connected or combined; things of the same kind only ean be urited. Things or jersone are connected more or less remotely by some common property or circumstance that serves as a tie; they are combined by a ajeciea of juncture; they are united by a coslition : houses are connected by means of a common passage; the armies of two nations are combined; two armies of the same nation are united. Trade, marriage, or general inter course, create a connection between indi ridalis; co-operation or similarity of tendency are grounda for cominination; entire accordance leads to a union. (Crabb: Eng. Synon.)
eōn-měo'-ť九a, pa. par. or a. [Connecr.] A. As pa. par.: (Sae the verh).

## E. As adjective

I. Lit.: United, linked, or fastened together. - Onward mothinks, and diligentig slow.

## II Figuratively :

1. Joined ar united by some bond or asse ciation.
2. United or linked together in a serics consistent, coherent.
3. United by marriage.
4. Concerned or interested in.
"I call him ourg; for, be essurad, I cannot segarate myselif from any thigg with which sou are connected. - Crabh thus diacriminates bet and related: "Connexion marks aftinconnected and related: "Connexion marks aftinity ln an indefnite manner; relation in a apecific manner. A connexion may be either closa or remote : a relation direct or indirect. What is connected has eoma common principle on Which it depends; what is related has some likeness with the object to which it is related, it is a part of some whole." (Crabb: Eng. Synon.)

## A. Transitive:

1. To win or gain by conquest; to obtain possessind of or authority over by superior strength.
"He conguered al the reyne of Femynye."
Chaucer: $C . T .$, sun

* 2. To acquire or gain in any way, to win to earn.
 oure righte beri-

3. To take possession of or gain by art or otherwiae.
"By degrees the virtues and charms of Mary conquered the Arat place in her husband' affection"-
4. To vanquish, to overcome by surering might.
"Th8 conquired Greate Alexander the Medis a of Daniol, Argument

[^177]5. To aubdue, to overcome, to surmount

Whe conquer'd nature, ohould proidoncior, it,"

* 6. To ancceed in anything, to manage, to ttain to.
"If thon with quagntyse conquare hit, I quyto the
thy meda", Rng. Allut. Poems ; Cleannean, I,682. Loue anketh peose and ouer ohnall: And who that fighteth most withell Shall lest conquere of hitemprise,", bly, iii.
B. Intransitive :

1. To be victorious, to overcome, to gain the victory.
" Kach o'er ite rival's ground extending Altornate conquering, shiftilig. , hlourdig."
2. To attain, to ancceed.

II Crabb thus diacriminates between to conuer, to vanquish, to subdue, to overcome, and to surmount: "Persons or thinga are conquered or subdued; persons ouly are eanquished. An enemy or a country is conquered; a foe la vanquished; people are subdued ; one may be vangurble la a singlo batia; one is dued only by the moat violent and persevering measares. William ths First conquered England by vanquishing his rival Harold ; after which he completeiy subdued the Engliah. Vanquish ia used only in the proper aenas conquer and subdue are likewise employed figurativeiy, in which sease they are analogous to overcome and shirmount. That is conquered and subdued which is in the mind: that is and sube surmounted which is either in ternal or external. We conouer and overcome ternat makes no great reaistance; we subdue What makes no great reaistance; we subu in and surmount what is violent and atrong in ite oppoaition; dislikea, attachments, and feel inga in general, either for or againat, are conquered; unruly and tumultnous pasaions are to be subdued; a man conquers himself; he subdues his apirit." (Crabb: Eng. Synon.)
$\dagger$ cờ'-quer-a-ble (quer as hrẽr), a. [Eng conquer; -able.] Able or liable to be con quered, overcome, or subdued.

3. One who overcomes or subduea; a victor, a vanquiaber.
"Increasing commaerce mid rorving art
TI The epithet is especially applied to WilLlam of Normandy, who conquered England in 1066. According to some William is im properiy called the Conqueror; for, though victorions in bettle, he had to come under an
engagement to observe the laws of the realm before obtaining the crown. But this is not uncommon with conquerors. Speaking of what we usually cali, though somewhat improperly, the right of conqueat, Blackatone pays that it is "a right allowed by the law of nations, if not by that of nature; but which in reason and civii polity can mean nothing more than that, in order to put an end to hostilities, a compact ia either expressly or tacitly made between the conqueror and the conquered thst, if they will acknowledge the victor for their master, he will treat them for the future as anbjects and not as enemies. (Blackstone: Comment., introd., \& 4.)

I Crshb thus discriminates between conqueror and victor: "A conqueror la always anppoaed to add something to his poaseasiona; a victor gains nothing but the superiority: there is no conquest whers there is not something gotten; there is no victory where there is no contest : all conquerors are not victors, nor all victors conquerors : those who take possession of other men's lands by force of arms make a conquest; those who excel in any trial of skill are the victors." (Crabb: Eng. Synon.)

(7) Out of all conscience: Uncoascionable, anreasonable.
II. Technically

1. Mentol Phil. \& Ethics: The noral sense, the internal monitor which signifies approval and we do well, and inflicts more or less acute and lasting pain when we act sinfully. It is generally held to be the Vicegerent of God, or, as Byron calls it, the Oracle of God, letting us know what the Divine judgment on our conduct is; but here the difficnity arises, that the indications of the conscience are often whong. Salul was conscientious when he took part in the cruel martyrdom of Stephen and salisequeutly persecuted the Christians, but, in pophlar ithrase, his conacience was not enlightened. This auggests that coascience is not a simple but a complex part of our aature. Int its decisions there mingles first an operation of fallilue intellect junging of conduct, then follows an emotional part generatiug the satisfaction or the dissatisfaction produced by that judgment. In this case the emotional part would be the Vicegerent of God, and unerring, such mistakes of reasnning as might be com mitted being those of the intellect. Moral sensibility may be bluuted by neglect of the monitions of conscience, till at length it scarcely operates, the state being reached in which, to use Scripture phraseolngy, "the conscience is seared as with $s$ hot iron." [I. 2 (1)(3).]
2. Mech.: A plate resting against the drill. head and enahling the pressure of the breast pr hand to be brought upon the drill; a pallette. (Kright.)

## - Courts of Conscience

Law: Courts of request established by the London Common Coancil to be ased for the recovery of small debts. They arose at least as early as A.D. 1517 ; they were auperseded by County Courts, established in 1846 by 9 and 10 Vict. c. 90

## conscience clanse,s.

Law ed Education: A clause designed to protect the conscience of a child or of the parents from being subjected to religious teaching of which the latter disapprove. It was first introduced into the Endowed Schools Act of

1860, which had to do with secondary edacation. With regard to primary or elementary education, the State, in aiding deoominational schools by money either raised by rates or taken from tha imperial exchequer, botin the oaeand the other obtained from persons belonging to all the deoominations io the country or no denomioation at all, consjdered that when there was one school in a parish for the education of both Church and Dissenting children, the latter should be exempted from any relicious teach. ing to which their parents ofjected as well as from atteadance at the Established church In November, 1863 , accordingly the Comurch. of Council on Education extended the conscience clause, borrowed from the ondowed, to elementary schools of the kind described in this article. Nany of the clergy were much opposed to it, bot it held its place and was Iaroduced as sn essential provision into the great Education Act of 1870 .
conscience-money,y. Money forwarded, as a rule anoaymnusly, to the Chsncellor of the Exchequer for unpaid incame-tax. In most cases the sender intentionally underestimsted his income when filling la his return on the ambject, but subaequeotly repented. It amounta to some thousand pounds year.

The conseguence limpe false behind. ${ }^{\circ}$
II. Games (Pl.): The name of a child's game. some what like crose-readings.
Sente and Sensibility, eh consequences."-Mits Aurten:
-f (1) By consequence:
neceaary result or effect. Consequently, as a
(2) In consequence of: By resson of, through.
"In consequence of which, your welcome boon
Did not arrive till yestarday at noon."
(B) Cowper: To Mra Nevton.
(3) Of consequence: Consequently, as a necessary reanlt or effect.
"A cootagioo raore opidernical, and, of consequence,
roore fatal."-Suift: Against Puming.
If Cralib this dioch
of Crablb thus discriminates between consequence and result: "Consequences flow of themselves from the nature of things ; results are drawn. Consequences proceed from actions In genersl ; results proceed from particular efforts and attempts. Consequences are good or bad. resuits are sinccessful or ungnccessful bad: endesvour to avert consequences which tliresten to be bad; we endesvour to produce results that are according to our wisbes. Not to foresee the consequences which are foreseen by others, evinces a more than ordinary ghare of indiscretion snd infatuation. To calculate on indiscretion snd infatuation. To calculate on executed enterprise, only proves a consistent blindness in the projector." (Crabb: Eng. Synon.)

- For the difference between consequence and effect, bee EFFECT; for that between consequence and event, see Event; for that between consequence and importance, see ImportA NCE.

0б̆n-sẽr-vā'tion, s. [Lat. conservatio, from conservatus, pa. par. of conservo = to preserve, to maintain.]

1. The act of preserving, maintaining, supporting, or protecting; protection, preservation.
2. Preservation or protection from decay (lit. d fig.).
'Io addition to this pawer of propagation, organtaed Todid \& Bowman: Phyfiov. A nat., vol. L., Introd., it 10.

- Conservation of energy, + force, or vis viva. Nat. Phil.: The geversl principle that energy communicated to a body or aystem of bodies is oever lost: it is merely distributed and continues to exist as potential energy, as motion or as heat. Farsday directed attention to the subject, Grove elaborstely treated it, and it now atanda as one of the axioms of physica. It is sometinues called correlation of forces. [Cormelation.]
"We, troreover, apeak of the conservation of energy
insteri of the ommeration of force." - Tynaial ; Frag. of Science \{3rd. ed.). 1.23.
©бn-sẽr-vä'tion-al, a. [Eng. conservation; -al.] Tending to conserve. (Nuttall.)
cón-sẽr'-vą-tism, \%. [Eng. conservat(ive); -ism.] The political tenets advocated by the Conservatives-viz., the preservation of the present British constitution and the iustitutions of the country, especially the monarchy, the House of Lords, tha Eatshlished Church of England, aud, as a buttress to it, that of scotland. There may be also a religious conservatism, a doctrinal conservatiam, an ecclesiastical conaervatism, \&c.
côn-sõr'-va-tive, a. \& s. [Fr. conservatif (im.), conservative (f.); Sp., Port., \& Itsl. conservativo.] [Consenve.]
A. As adjective

1. Gen.: Tending to preserve from loss, waste or injury.
It The aphericai agure, as to alt hearenly bodies, su of all others. "-Poacham.
2. Spec.: Desirous of preserving the existing institutions of the eountry, or, if any of them must needs be altered, then keeping the clanges within the narroweat poasible limits. [B.]
. The movement agningt the last king of the House
of stuart was la Engliand conereative. in Scotianid of stuart was la Engiand conservative, in s.

## B. As substantive

1. Singular:
(1) Gen.: A person or Being who conserves or preserves anything ; a preaerver.
"The Holy Spirit is the great connervative of the
new life."-Jeremy Taytor: Of Contrmation, iol. 8 l
(2) Spec.: One belonging to the party deacribed under 2, or holding similar convic thous in any other state.
2. Pl. (Conservatives): One of the two great political parties in England and the Britiah empire. In every society which has ever existed one large section of the community has been led by mental constitution, hy its position in society, or by other causes, to deprecate change, unlebs where the necessity for it can be proved by irrefragable evidence. Others, from the same causes, tend to become a party of movement, and ou minch less proof of ite necessity than thst which the first would deem aufficient, advocate change sad what they deem reform. Though both partiea are needinul to the healthy political life of the country, yet each is disposed to regard the other as ita mortal foe. Each has a central organization, besides an inuoense number of local aocleties scattered over the country. The prominent spirits of each party are never long at rest, but seek every opportunity of sdvocating their views. Perhaps one-eighth of the commmnity have pronounced political views, and are able to explain why they hold them; the remaiuder conatitute al inert mass of no strong political convictions, but this swaying first to one side and then to the other, successively puts each party in power. The national obligatious entered into by the one are scrupulously reapected by the other, even though it may at first have opposed their being formed. Both these partiea consented for many years to be known only by dicknames, which caricatured their failings-the party which, operking broadly, reaisted change being stigmatized by the aickusme Tory, and that which advocated it by Whig. Neither term was of Euglish origin : the term Tory [Torv] came originally frou 1 reland, and Whig [ W y ia] from Scotland. It was inevitable that sooner or lister these aamea should be exclanged for othera of a more conplimentary character, and accordingly the "Tories" called themaelves "Conaervatives," and the "Whige" sssumed the of the term, see Conservative Party. It was ouggested that their opponents were the Deaauggested that their oppowents were the Deatructive party, but the name was unjust and Was boon forgotten. Lord Besconstield attempted to revert to the oid name Tory, but his followers did not take kindly to it, and the word was left to his opponeuts to nse. Constitutionalist was alau proprosed as a aubstitute for it, but the use of that new term did not loug eontinue.
The first French revolution being in the earlier stages everywhere welcomed with euthusiaan by the party of progreas, the reign of terror ao diacredited that party that it placed power in the hauds of the Conservatives for about forty years. The strong Libersl movement which produced the tirst Reform Bill terminated its rule for the time. Since then it has been in offlee for the following periods: Under Sir Robert Peel, from Deperiods: Under sir Robert Peel, from he. from September 6, 1841, to July 6, 1846 ; nuder the Earl of Derby from February 27, 1852, to December 28 of the same year; from Fabruary 25,1858 , to $J$ une 18,1859 ; and again from July 8,1866 , to February 27, 1868 ; under Benjarmin Disraeli, afterwards Lord Beaconsfeld, from February 27, 1868, to December 27 of the same year; aud from February 21, 1874, to April 28, 1880 ; under the Marquis of Salisbury from June 24, 1885, to February 6, 1886, and from August 3, 1886, to August 16, 1892, when Mr. Gladrtone took office. [Conservatiam.]

I (1) Conservative Club: A club founded in Lundov in 1840. The mansion in St. James street which it occupies was opeaed on February 10, 1845.

## (2) Conservative party

Political Hist.: Tha name given by Mr. John Wilson Cruker in 1830 to the great party in the state previously kuown as the Tory party. [B, 2.] [See also Tozv.]
"'. We are now, as we at ways have beelu, decidedy Tory, Aud which might with more propriety be wilied
the Conuervitive, purty."-Qu. Sev. vol xili, No. ©s the Comurrytative.

3. To examine or enquire.
" "Twere to consider too curtously, to consider so."
4. To hesitate, to doubt, to waver.

Which horning npwards, in raciceasiuen drlea
Tho tears that stod considering in her oyela,"
Dryden: Ovid; Hetamorphoses vill.
T Crabb thus discriminates between to consider and to regard: "There is most caution in considering; most sttention in regarding. Ths circumstances, aituation, adivantages, dissavantages, and the like, sre objects of considera-
tion; personal character, abilities, and quali-
ties, are eljeects of regard. A went of considera tion leads a person to form a very unfair judg. ment of others; a want of regard makes thein regardless of their comfort, convenience, and respectability. We ought to have a considera tion for all who are in our service, not to dethon for all who are in our service, not has
mand more of them than what we nuay reasonmand more of them than what we niay reason-
ably expect; we ought at all times to bave a ably expect; we ought at all times to bave regard for our owo credit and reapectability,
ninong those who are witnesses of our con nuong those who are witnes
duct." (Crabb: Eng. Synon.)

- cón-sĭd-ẽr-a-bility-ty̆, s. [Eng.consider able; -ity.] The quslity of being considersble or capable of being considered.

## cồn-sǐd'-ẽr-a-ble, a. \& \& [Fr. considernble]

a mitiva or ground of action or conduct.
"The consideration, in regard whereof tha law for
hiddeth these thinge, was not becanse those nations did use them"-Hooker.
11. A point or matter to be considered or taken into account.
".'. hy what considerations the Applles inility of

12. The ground or reasou for s conclusion.
"Not led by any commandment, yet moved with musil con.
13. A clain to notice or regard ; importance, worth, consequence.

14. A reward, recompense, or payment for any act done.
"We are provident enough not to part with ang thing sarviceanble to our bodlee under a good considerathe creation
15. An equivalent
"Furelgners can never take our hills for payment

II. Law: (See extract).
"Consideration is the manterial cause of a coatract, without which no contract hisdeth. It is is either ex. pressed, as if a mas bargain to give twenty ahilings for a horsa, or else implied as whers a man comes himseif and his harse without barkaining with with the host, if he d sisharge not the house, the hosi miny stay
his horse. -Cowel.
his horse,"-Cowel.

- 1. To take into consideration:
(1) Ta consider, to reflect on, to weigh.
(2) To pay attention or regard to as a matter deserving of consideration.
of high they took into consideration another matter 2. In consiletation of: Comsideriag, taking into account.
- (1) Crabb thus discriminstes between consideration and reftection: "Consideration is employed for practical pnrposes; reflection for matters of speculation or moral improvement. Common objects call for consideration: the workings of the mind itself, or objects purely spiritual, occupy reflection.
(2) Ha thas diacriminates between cona sideration and reason: "Considerations inHuence our sctions; they are a apecies of motives: reason determines our belief or our conduct. Considerations are restrictive or negative ; reasons are positive. We may havs nowerful considerations for forbearing to act and powerful reasons for adopting one litie of
conduct in prsforence to snother. Considerations are almost always peranal, affecting either our own interest or that of othera; reasons are general, and vary sccording to the nature of the subject. No consideration of profit or advantage ahould Induce s person to forfeit his word. The reasons whleh men assign for their conduct are often as absurd as they sre false." (Crabb: Eng. Synorr.)
cotn-sid'-ẽr-a-tive, a. [Eng, considerat(e), ive.] Given or inclined to reflection; thoughtful, contemplative.
* cồn-sǐd'-ör-a-tõr, s. [Lat.] One who considers or reflects; a considerer
Nor..'i" so. thinking consideratore . . ."-Brown: Chr
ofn-sǐd'-öred, pa. par. or a. [Consimer.] A. As pa. par.: In seases corresponding to those of the verb.

Atrides, parting for the Trojen war,
Consignd the youthful confort to his care."
Pops: Odyusy.

- (4) To sppropriate, to apply to a cariain puryose, to assign.
"The Froach comnnader consigned it to tha uee for
Which it wai intonded hy the donor."-Dryden : Pablet ;
(5) To condemn, to givs up to a certain atate.

II. Technically:
* 1. Eccles. : To mark or sign with the sign of the cross.
"Io haptionn wo are adnalted to tho kingdom of Christ, prosented nnto him, consigned with his eacra
ment. - Bp Taylor: Great Exemptar, pt. i, Dia, C . 2. Comm.: To hand over or entrust to an agent gooda for disposal or superintendence.
- B. Intransitive:

1. To consent, to agree.
of ramidesty, a mald yet rosed ovor with the virgin erimson of roodesty, It wiore... Ahard condition
2. To yield, to aubmit, to give way.
"All lovera young, all lovers muast

IT Crabb thus discriminates between to con sign, to commit, and to entrust: "The idea of transferring from one's self to the care of another is common to these terms. What is consigned is either given absolutely away from oue's self, or ouly conditionally for one's own purpose: what is committed or entrusted is given couditionally. A person consigns his property over to another by a deed in law; s merchant consigns his goods to another, to dispose of them for bia advantage; he commits the management of his businesa to his clerks, and entrusts them with the care of his property. Comaign expresses a more positive measure than commit, and commit than entrust. When a chitd is consigned to the care of another, it is an inconditional surrender of one'a trust into the hands of another; but auy person into the hands of another; but auy person
may be committed to the care of another with may be committed to the care of another with
various limitations; aud when he is entrusted to his care, it is hoth a psrtial and temporary matter, referring mostly to his personal safety, and thst only for a limited time." (Crabb: Eng. Synon.)

* cŏn-sig'-nạ-tar-̆̆, s. [Lat. consignatus, pa. par. of consigna.] One to whom goods are consigaed or eatrusted ; a consignee.
oŏn-sĭg-na'-tion, s. [Fr. consignation; fron Lat consignatio, from consignatus, pa. par. of consigna.]

"His constablity ceases immedintely after the
coremony is over."-Nisom: Travels in Eng., p . 128. (Datien)
cón'-sta-ble, * con-es-ta-ble, s. [Din. constabel; Sw. konstapel; Dut. konnetubel; Fr. connetable; O. Fr. \& Prov, conestable; Sp. condestable; Port. condestarel; Ital. conesta-
 I. Formerly:

1. On the Continent:
(I) In the Roman empire during the latter part of its existence: The comes stabuli, the functionary from which the medizval constable developed, had (as his name imported) charge of the stables with the horses housed thereio. He was not a plebeian groom, buta high functionsry, who might now be called Master of the Horse. The English word constable has not, as fir as we know, been spplied to him in this rudimentary stage of his development.
(2) In France and some other continental countries during medieval times: Uuder the early French kings the combs stabuli, now transformed into the "conestable," was \& high functionary of governinent. He was com-mander-in-chief of the army, which then depended for success a good deal upon horscinen; was judge of military offences, and regulated all matters of chivalry. Such was the position of the first celebrated, and then notarious military leader, known to the French as the Conestable, and in English history $8 s$ the Constable, de Bourhon, who fell in his daring sttack on the city of Rome on Bisy 5,1527 . In 1627 , the office, which his possession of it had rendered immortal in history, was abolished. Napoleon I. revived it, but it was finally brought to no end on the restoration of the Bourbon dynssty.
France a had. alnce the elorenth century given to 2. In England: The office of the constable crossed the Channel with the Norman conquerore, the dignitary who filled it being called Lord High Constable. The functions wers the same as those of his French brother. As chief judge of the Court of Chivalry he encrosched on the jurisdiction of other legal functionaries, and his power in this direction had to be abridged, which it was by the statute 13 Richard 1i., c. 2. The office of the High Constable, though carrying with it what may be called the Commander-in-chicfship of the srmy, was liereditary, being attached to certain manors. It was therefore held successively by the Bohuns, Earls of Hereford sind Essex, with their heirs, the Staffords, and the Dukes of Buckingham. In 1514, Henry furn. discharged the manors of the burden of furnishing hereditary commenders to the sminy as an ludirect means of dismissing the conlmanders theroselves. When, in 1522, the then existing Duke of Buckingham was attainted for high treason, the manors themselves were confiscated to the Crown.
1I. Now: The constable of Englisb common law was early introduced in the American colonies, and now exists throughout the United Statee. though the office luas lost many of its Statee. though the oftice has lost many of its
former functions in the cities, where it is in former functions in the cities, where it is in
grest part replaced by the police. In boroughe, townships, dic., the conatable still constitutes the cxecutive officer of the law, he having the power io eome states, to pursue and arrest any crimital or breaker of the public peace, wbile everywhere it is his function to execute the urders of the magietrate. In England, constablee are of two kinds, high and petty coustables. The function of the latter is to preserve the peace.
"This attempt to ravive the license of the Attic

Works iL 85 .
(8) Frequent, continual
II. Math. A Physics: Unvarying or nachangtog. (See the compounds.)
B. As substantive:

Math. \& Physics: That which is not subject to change, that wbich remains invariable.
I (1) Arbitrary or indeterninate constant
Math. : A constant to which any value may be assigned at pleasure. Thus in the sigelraic equation $n a+4=1-m y, n$ and $m$, the coeqficicnts of a and $y$ reapectively, may have any arbitrsry valua sssigned them that one chooses.
(2) Constant of aberration, of friction, icc.:

Physics, Astron., de. : A constant by the determination of which the aberration, friction, or snything varylug within equally narrow limita may at any moment be determined.
(3) Determinate constant

Math.: One which cannot be ao altered; ona which remains invariable, as the ratio betwcen the radins and the circumference of 2 circle.
(4) Indeterminate constant: [Avbitrary contanit.
(5) Variation of constants :

Math. : This strange expression, which scems s contrsdiction in terms, mesns that what is theoretically a constant, and would be so if no other force operated, is made variable by the action of such a force. If, for instance, the orbit of a planet were a constant, a perturbation of its course in that orbit might and would be effected by s plsnet being in its vicinity as
it passed a certand point ; the constant wonld then for a time become a varisat.

- For the difference between constant and contiuual, see Continual; for that between constant and durable, see Durable.

## oonstant battery, s.

Elect. : An electrtc bettery with two liquids. It is called constant because its action remains unimpaired for a considerable time. Daniell's Grove's, Bunsen's, and other batteries are of this type.

## constant ourrents, s. pt.

Elect. : Currents of electricity produced by such batteries. They do not soon lose their force.
oonstant foroes, s. pl.
Physics: Such as remain invarisble or unchanging.
oonstant quantities, spl.
Math.: Such ss remsin invariable or unchanging while others increase or decrease.

## constant white, s.

Pigarents: Sulphate of beryta. When welt prepared and free from acid, it is one of the best whites for water-colour painting, being of superior body in water, though not in oil. It is called also permanent white and barytic white. (Weale.)
cơn-stän'-tia (tia as sha), s. [So named from the farms of Constantis at the Cape.] A kind of wine imported from the Cape of Goot Hope, renowned as the best ligneur wine after Tokay. The vines were originally brought from Shiraz, in Persia. (Ogilvic, \&c.)

(4) An assemblage of splendours or excel lences.
II. Astronomy :
*1. Originally: The relative positions of the seversl planeta st a given monent.

2. Now: A number of fixed stars, grouped. for more easy identification, within the limits of an imaginary figure, supposed to be traced upon the vault of heaven. Eighty-three conupon the vanit or heaven. Eighty-three con-
stellations are recognised by modern astrostellations are recognised by modern astro-
nomers. The ancienta had forty-eight, of which forty-seven sre still accepted, the remsining one, Antinons, being now included in Aquila. Hevelins, of Dantzic, a distinguished astronomer, who flourished in the seventeenth century', intercalated nine others: and finally Lacaille, who proaecuted astro nomical researchea in the southeru hemiaphere, from 1751 to 1755 , under the auspices of the French Government, found it needful to add twenty-aeven more, mosily in regious of the aky which the ancients never beheld. The eighty-three recognised constellations may be grouped as follows:-
(1) The twenty accient nortliern constella tions:
3. Andromeda, Eng, name, Andromeda; 2. Aquila the Encle ; Auriga, the Charioteter; ;. Botere, Broter 3. Cassiopea, Cassiopen; 6. Cepheus, Cepheusiu. Co-
 Dragon, IL. Equuleus, Equuleus; il. Hercules, Her. Horse; 16 . Perseus, Perseus; 17 . Souita, the Arruw;
4. Triangulum. the Trinngle; 19. Vrsi Major, the
(2) The twelve ancient zodiacal constellations:
 6. Virgo, the Virgin, 7 Lilra, the Balance; 8 , Scor pio, the scorplon; 9. Sagittrius, the Areher; io. Ca pricornuas the Goat;
(3) The fifteen ancient southern consteila-
5. Cana, the Altar ; 2. Argo Navis, the ahlp Argo;
 Whate ; © Conta Australse the southeru Crowu \& Corvus, the Crow; ; Crater, the Clay; 10. Eridgulas 13. Lapus, the Wutt it. Oriou, Orion ; 15. Piecis A A tralis, the Southern Fish.
(4) The nine introduced by Hevelius

I Camelopardus, the Giraffe; 2 Chnes Vematicit the
 6. Lyux, the Lynx ; 7. Monoceros, the Unicokn;
(5) Lacaille's twenty-seven aouthern cosstellations as revised:

1. Antlla Pueumatien (ahbrevlated into Antila), the
Alr-paup; 2 Appuratus, reloticiun, Bculptoris (\$culy-
noll, bof: pout, jowl; cat, çell, ohorus, çhin, bençh; go, gem ; thin, this; sin, aç; expect, Xenophon, exist. .ph = f.

[See all these words in their aeversl places.] The several stara are desigrated by Greek letters, as a Lyræ, y Persei. The more im portant have also distinctive names, as Are turus $=a$ Bootis; Aldebsrsn $=a$ Tsuri; Bel. tarus $=a$ Bootis;
latrix $=\gamma$ Orionis.

- coัn'-stẽr, o.t. \& i. [Construe.]

1. Trans. : To construe, to explain,
2. Intrans.: To conjecture.
"Conster what this ia ond tel not:
Wyat: A Ridate of a Offt given by a Ladie.

[Consistorv.] oon-stry, " con-stres, [CONsistorv.]

cơn'stěr-nāte, v.t. [Lat. consternafus, pa. par. of consterno $=$ to terrify, to sfright, from r. consterner.] To strike with consternation. "The king of Astopia and the Palatins werestrangely
consternuzed at thitiasociation"-The Pagan Prince, consternized at
1690 (Nares.)
cơn-stẽr-nā'-tion, s. [Fr. consternation Sp. consternacion; Port consternaçio; Ital. consternazione, from Lat. consternatio (genit, consternationis) $=$ consternation ; consterne $=$ to strew aver, to bestrew: con = together and sterno $=\ldots$ to strew.] Such a combination of surprise, wonder, sind terror as to literally or figuratively prostrate the indi vidual thus affected.

> In allenes wrappid, in the ehiefs around. Attend ths atern reply." Pope: Homernatian drownd, Hiad, bk. ix., l. $556-8$

* cŏn-stille', v.t., [Pref. con, and Eng. still (q.r.).] To diatill, to drop,
"Som drope of thi grace adowne to me conetive", $\begin{gathered}\text { Lydgate: Hinor Poems, p. S2 }\end{gathered}$
cŏn'-stǐ-pāte, v.t. [In Fr. constiper; Ital. costipare; Sp . constipor, from Lat. constipo $=$ to press or crowd closely together : con $=$ together, and stipo = to press, to crowd.]
I. Ondinary Language:
* 1. To crowd together into a narrow compass; to thicken, to condense.
"There might arise sonne rertignonn motlont or ntoma misht be thrust and crowded to the anldatio of those whirlpools and thare coosestipate one another

2. In the same sense as II, (q.v.)
II. Medicine:

* I. Gen. : To obstruct by filling up capillary or other passages.
"It in not probahle that any alimeat shooid bave
 2. Spec. : To render costive, to hind. STIPATION.]
of Omitting honey, which is inxative, and the powder hind than purgs ind thin, doth rather ronutipite end
Hoceen the belly."-Browne: rulgar Etroura
cơn'-stǐ-pā-těd, pa. pa. \& a. [Constipate.] con-stǐ-pā'-tǐíg, pr. petr. \& ar. [Constipate.] cŏn-stī-pä'-tion, s. [Fr. constipation; Prov. constipacio; Sp. constipacion; Port. constipaçono Ital. constipazione, sll from Lat. constipatio $=\mathrm{s}$ crowding together.] [Constipate.] I. Ordinary Language:
* 1. The sct of crowding anything into smsller spsce; the state of being so crowded ; contensation.
"This woriseth by the detention of the mpirits, and
conertipation of tho tuigible parts."-Bacon: Nat. Bist 2. In the same aense as II. (q.v.)
II. Med. : An undue retention of the fæces or their imperfect evscuation. When the morbid sffection is but slight it is of little moment. In most cases, however, there is headiache, more rarely vertigo; while if tha diseaso he protracted snd severe, colic, hæmorthoids, cuaneona cruptions, hyateris, epilensy, or even lleus or enteritis, the last two fatal diseaca,
may be the result. In many cases conatipation is from a torpid condition of the liver, or loas of tone in the muacular coat of the alimentary canal, which in some cases ia moreover distended by flatus. In many cases it is produced by the eating of an undue quantity of food, or of food that is indigestible. It is continually present in those who lesd a sedentary life. Purgatives may temporsrily remove a confined atate of the boweis, but without abundant exercise in the open air no permanent cure can be expected.
con-stif, v.t. [Conster, Construr.]
con-stir-rexe, s. [Construcr.] "".. © constirrere: expositor, expositrix, conetruetor,

"Me didst Thou consfitute e priest of thine""
HVordtworth: Excursion, ble iv.
5. A term generally used in Scotland to denote the opening of an ecelcsissticsl court
with prayer by hin who presides in it It is said to be constituted with prayer by the Moder. ator.

Trabb thus discriminates between to con stitute, to appoint, and to depute: "The act of choosing some persan or persona for an office, ia comprehended under all these terms: constitute ia a more solemn act than appoint, snd thia than depute: to constitute is the ect of a body; to appoint and depute, either of a body or an individual : a community constitutes an one their leader; a monarch appoints his miniaters; an assembly deputes anme of its nembers. To constitute implies the act of making as well as choosing; the office as wel as the person is new; in apprinting, the person but not the office is new. A person may be consituted arbiter or judge as circumstances may require; a successor is appointed, but not consituted. Whoever is constituted is invested with supreme authority derived from the lighest sources of human power, conmon consent; whoever is appointed derives his authority from the authority of others, and has, consequentiy, but limited power; no individual can appoint another with authority equsl to his own; whoever is deputed has privste snd not pnblic authority : his office is partial, often conflned to the particnlar transaction of an individual, or a lody of indiaction of an individual, or a
viduals." (Crabb: Eng. Synam.)

For the difference betwreen to constitute and to form, ace Fory.

* cŏn'-stĭ-tūte, s. [Lat. constitutum, nent. pa. par. of constituo $=$ to establish.] [Cosstiruent.] Thst which is established or appointed; sn established law.
"A man that will not ohay tha Etigg's contiture."
